5860. FS: Alpha Delta VRC Speaker

Newsgroup: rec.radio.scanner
Date: 1999-12-11 00:00:00 UTC
From: Victor and Lisbeth Trucco <trucco@teleport.com>
Message-ID: <Kyt44.73417$C7.3155158@news1.teleport.com>
Source record: 100022
Cross-posted to: rec.radio.shortwave,rec.radio.swap,rec.radio.scanner

The Alpha Delta Variable Response Console VRC is an advanced audio processing speaker system that will enhance the reception capability of any receiver, transceiver or scanner. The ducted port bass reflex speaker is designed as an integral part of the system. A low distortion, low harmonic, push-pull audio amplifier outperforms the single-ended type and provides clean, crisp audio. A continuously adjustable 12 dB bass boost/cut circuit enhances bass response for high-fidelity music and reduces low frequency rumble for sharper voice clarity. The continuously adjustable sharp cutoff Sampled Data Switch Capacitor Audio Filter can be set for optimum interference reduction for AM, CW, SSB or DATA. The calibrated LED light bar shows the cutoff frequency. The Peaking circuit allows CW/DATA signals to pop-out of the noise. A fully adjustable 40 dB deep Notch circuit removes interfering heterodynes. A special circuit allows the Peak and Notch to exactly track each other. Output jacks for recorders and headphones are provided. Supplied with 12V wall transformer. 8.25Wx8.25Hx6D inches.

$185 includes shipping CONUS.

Thanks,

Victor Trucco

5862. Image Reception ?

Newsgroup: rec.radio.scanner
Date: 1999-12-11 00:00:00 UTC
From: Craig Fraser <cfraser@interlog.com>
Message-ID: <3852A154.9B890746@interlog.com>
Source record: 100024

Hi. I have read here some times about people receiving images on their scanners. If I know the IF frequencies of my scanner, how can I figure out the actual frequency of what I'm hearing? For instance, my first IF is 39.15 MHz. It is a dual conversion radio, other is 450 kHz. If I pick up strong signals at 958.3 MHz, would it be reasonable to assume this could actually be 958.3 - (2 x 39.15) = 880 MHz ? I can't confirm this idea as this 880 MHz frequency range is blocked on my radio. These signals are strong, but the tuning is very 'fuzzy'. Just trying to figure out the behavior of a new radio. Thanks.

>and click on San Diego County

The only problem with that web-site is that a BIG majority of the frequencies listed are all outdated. Carlsbad is no longer VHF... they went digital with the county. Chula Vista is no longer VHF... they went to San Diego City's trunked system.

A better site is: <http://sandiegotrunk.webjump.com/trunk.html>

Don't be ridiculous. OF COURSE some areas are safer than others. For example, there is no store in my neighborhood that is regularly held up at gunpoint, during broad daylight or otherwise. My police scanner tells me so. ;-)

More to the point, while I support the right of taxpayers to monitor the public service agencies they are paying for, I would never depend on monitoring police frequencies to protect my family and property. By the time you hear about an armed robbery over the police scanner, the robbers have *already* left the store and run through your back yard.

If you can't move to a less crime-ridden area, how about organizing a neighborhood watch?

Note: Spam shields raised (with rotating shield frequencies). Please post responses to this newsgroup.

Don't be disingenuous. You know as well as I do that some neighborhoods are safer than others. If that were not the case, you'd be living in South Central LA where the rents are cheaper.

>Wait, don't answer that because it's not related to scanning.

Not only disingenuous, but a hypocrite, too? Practice what you preach!

5869. Re: Opinions on BCT-7 ?

Newsgroup: rec.radio.scanner
Date: 1999-12-11 00:00:00 UTC
From: Ryan <rvkeller@iupui.edu>
Message-ID: <3852B4D6.F68F7404@iupui.edu>
Source record: 100031

I just wanted to let you know what I have heard about this scanner. I recently got a BCT12, the one that looks like a radar detector. I am not really sure if its a good scanner, but I heard it is. Basically the BCT 7 is like a BCT 12 with a 100 channel hand held build into it. I have heard that many people who told me about the BCT12 said they liked the BCT 7, but they wanted something smaller for a car. I think someone said they have the BCT 7 installed in an RV. Most people like the fact that you can select which state you want to for purposes of picking up the mobile extender freq from most highway patrol/state police vehicles. I have not got my bct 12 yet, it is in the mail though. I do know for a fact that many people like the mobile extender alert that warns of highway patrol vehicles ahead. I would say go for it. If I ever get an SUV, I may buy one. Also, there were a couple on ebay, you may wanna check there. Thats how I got the BCT 12 for such a great deal.

I am looking to trade for Drake SW2, R8, FRG-100, or ????? Must be in excellent cond.

I have to trade: Yaesu FT-50RD like new with two 5 watt batteries, Diamond SRH519 wide band rx antenna, cigarette lighter adap., deluxe keypad, SMA to BNC adap.,
CA-15 base charging stand, MFJ295 speaker/mic. This dual band HT has wide band rx and
full 800 MHz rx. Have box and manual. It is in perfect cond. I seldom use it.

Also to trade: Sony 7600G with AC adapter. I bought this radio new this year. It is in excellent cond. Have box and manual.

Will consider give or take some cash also. What do you have in excellent cond.? Would consider Sangean ATS909 and a scanner or ?????

Message-ID: <8317pnhhu1@nntp6.atl.mindspring.net>
Source record: 99896

Solon fire dept. is now up on UHF, on repeater output of 423.775. They share this freq. with most of surrounding communities for dispatch.

Lately at the scene, they say "go to 14" or "go to 15". These are obviously alternate fireground channels but I can't find the freqs. for them anywhere. It's not on the old VHF low frequency set (46.46).

Any clues?

Mike

Sorry to hear about all the UPS horror stories . . . guess I must be lucky to live in an area where their service is good. Last Tuesday I ordered an Icom IC-R10 receiver from Ham Radio Outlet, and the radio was on my doorstep by 8 PM Wednesday (of the same week). Granted, the shipping distance between the HRO store in Denver (which shipped the radio) and my home in Northern Utah isn't all that great, but for a package shipped UPS ground to arrive in less than 48 hours is damn good in my book.

Perfect condition, actually haven't used it but once. Tunable from
42-50mhz. $25 shipped in US only, thank you.

Well Tony...

If you deny you got the package, even though you did, because they dropped it without a signature, That is THEFT, and we certainly wouldn't condone that.

The only way you teach them a lesson is buy not doing business with them, or vendors who use them as their shipping company.

Discussing it publicly on these groups can't hurt either, keeps them on their toes.

Dan

Greg; It's always been well known that GRE made scanners aren't as sensitive as Uniden ones, but usually have better intermod and overload rejection. Most of your performance complaints seem to be related to sensitivity. Did you try the PRO92 anywhere that the Uniden had intermod problems? If the PRO92 were more sensitive, would it have pulled even with the 245? I see the 92 is selling for $199, so cost is more in line. Anyway, thanks for the review!

John

Actually, if you are kind enough to call their shipping office that handles your area, or you contact the driver, and let them know you'd rather not have them just drop the package, there's a good chance it won't happen again.

MIND CONTROL UTILIZING DIRECTED-ENERGY WEAPONS--NEW WEB SITES

Get the unvarnished truth about mind control involving directed-energy weapons and usage in the Cleveland, Ohio, area of the United States (and elsewhere)--so far apparently censored by Internet search engines, so that I have to do my own publicizing. Even the Internet seems to involve a certain amount of censorship. Criminals who want to control the social structure unhindered by any legal restraints would rather relegate this report to an obscure corner of the Internet. They have been operating avowedly totally amoral for several decades now. Hardened criminals flaunt their amorality mockingly in front of victims, knowing police will not respond to complaints. They operate at close range with no serious police interference. The cost of secrecy is high in human suffering. The criminals being sought do nothing but manufacture radiation weapons for the torture and destruction of humanity. As far as they are concerned, these weapons are for them primarily brain damage, torture, and extortion weapons for use in combat situations and wars of conquest--as instruments of social control in disregard of any Bill of Rights. Positive applications are lost. The objects of this "combat" are currently innocent, unarmed American civilians in their homes, and preparations could be underway to subject victims the world over to further atrocities.

YOU HAVE THE RIGHT TO KNOW !!!!

What you don't know could literally kill you or leave you vulnerable to total enslavement.

I didn't know until I was struck that there was absolutely no privacy in my supposedly private home. Thugs enter at will and spy on all citizens' activities with no restraint, often out of pure voyeurism.

So-called nonlethal weapons are actually lethal when used indefinitely without restraint and under certain conditions. Most victims harbor some amount of brain damage, deliberately inflicted by literal cooking of their craniums with hazardous radiation by thugs. This is a primary method relied upon to seal in the secret, ensuring the triumph of totalitarian

control and organized crime.

Criminals don't want you to know for one overriding reason. They fear regulation. With total ignorance of the population they need not fear detection, limitation, or reprisal. They would not be as inhumanly vicious as they are if safety were their primary concern. It is a misguided belief that the purpose of national security is served by suppression of information, which results in no legal or practical regulation or preparedness for assault. Help stop them and their Attila-the-Hun-type tactics of Control.

For more information see my web site at any of the following web addresses (mirror sites):

Now you have no faith in our fine scanner companies. They will come up with a way to receive the SS stuff. After all the police handhelds can hear it so why not us. It will require a new radio and it may take a while to "sync up" and break the scrambling code, but it will be done. Don't panic...remember than GPS uses spread spectrum and it is getting very cheap...

I don't think so.
My DSS phone says it hops over a selection of 173 frequencies several times per second with a digital signal. I think it would be very hard to track.

>what."

In my area, in the event that the local nuke plant melts down, they
expect to evacuate a city of 35,000 (that swells to 50,000 when
university is in session) over four northbound traffic lanes, through
a narrow mountain pass.

>It scattered 76 lbs of Plutonium, (roughly 8 times that required to give lung
>cancer to the entire human race,) across the Red Planet.

Did it? Or is that an assumption?

>Paranoid public tragically vindicated only days later

Days later? That thing went to Mars in "days"? It must have been
really cruising.

>Our closely monitoring, indeed policing, every segment of our government and industry
>have become survival requirements for our species.

Government yes, industry, maybe. But back to government. Let's not
forget that they are just a group of people we
hired/appointed/elected, and they DO work for us, and it IS our
responsibility to keep an eye on them. And if you took the average IQ
for all government workers, and compare it to the average IQ of the
rest of the population, how do you think that would turn out?

>Holding a Top Secret clearance can
>teach you to be paranoid.

I bet.

5912. Batteries for Icom R-10

Hi everyone........I would like to know if anyone has tried using
Nickel Metal Hydride (Ni-MH) batteries in their R-10.

I'm wondering if the radio is capable of running on them, and if they
fit properly in the battery compartment.

Thanks,
Greg Pratt

Hello all,
I have a completely VIRGIN Uniden Bearcat BC200XLT scanner for sale
this radio HAS NOT BEEN MODIFIED in any way
but can be modified to pick up those freqs you are not supposed to
listen too ;)
I have the manual,antenna,ear plug,DC car adapter
Wall wart charger,Three(3) batts,(all original Uniden),this AWESOME
leather swivel case that looks new and is very well built kinda like a
Motorola portable
case, and a Motorola converted spkrmic/speaker which comes in really
handy
This is one NICE radio but I have no use for it as I am trunked here ;{
It is in really good shape with no severe gouges or scratches and all
printing on the keys is 100%
I would like $160 for the radio
For Pictures or more info
please contact
2nzster@netscape.net

Thanks Tiny

Should be no problem at all, fitting, and running the scanner. Not sure about the Icom charger though... might want to use one designed for those batteries. Radio Shack's Ni-MH "AA"s are only 1200ma. Others are up around 1500ma., they will last longer!

Hi,

You can use all types in your Yupi!, NiCd's, NiMH's ect....
Yupi have standart voltage charger circuits with current limit (70mA)
So you can calculate how long time it will take to get full charged
batterys.

Exsample you have 700mAh NiCd's (like original)
700mAh (battery capacity) / 70mA (charge current)= 10hours
10hours*1.3 (charge effiency in NiCd's)=13hours total time
(then those 700mAh NiCd's are fully charged)

and 1500mAh NiMH's takes

1500/70=21,4 hours *1.2 (NiMH's charge effiency factor)=25,7 hours
So i think, its much more reasonable to use external charger when

battery capacity is higher than 1000mAh....

Feel free to ask more!

Mika

Sorry to be confusing, no my PRO 94 doesn't receive MilAir, I wish it did
however. I do like the scanner better than the BC9000XLT 100 times over
because of improved selectivity and sensitivity. The 9000 does have MilAir,
but its not very useful if you live near a cell phone tower.

5923. Here We Go Again....AIRBORNE SUCKS!!!!

Newsgroup: rec.radio.scanner
Date: 1999-12-12 00:00:00 UTC
From: wilson43@worldnet.att.net
Message-ID: <38533ad2.1185276@netnews.worldnet.att.net>
Source record: 99968
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap

Well, I've never said it before....BECAUSE I NEVER USE THEM...

But.....AIRBORNE SUCKS!!!!

I placed an order on 12/7 from a national online company, advertising free overnight shipping.

I was supposed to get it on 12/8, and according to the AIRBORNE tracking...it was shipped on 12/8 and "left at my front door"

I was home all day and no one came for a delivery.

Bear in mind this was a "signature required" delivery.

The vendor was supposed to ship out a replacement right away, and needless to say, that was never done, but thats another story.

Today I get a call from AIRBORNE inquiring as to whether I got my package. They said it had been "misdelivered" and they sent the driver out this week "looking for it"... They were asking ME what was going on....you'd think they would know....

I told them what I thought of their service and hung up.

So , when you hear about "Free overnight shipping" or simply "free shipping" inquire as to who is doing the shipping.

As in anything else in life, you get what you pay for, or DON'T pay for.....

Dan

There is no standard offset for repeaters in the VHF high-band. In fact, there are some repeaters that use a business channel as an input and a special emergency (EMS) channel as the output.

5929. Is POCSAG still used? If so, what are some freqs

Newsgroup: rec.radio.scanner
Date: 1999-12-12 00:00:00 UTC
From: netengr@pclink.com
Message-ID: <38534e31.54189883@news.pclink.com>
Source record: 99974

Anyone know if POCSAG is still used at all? I have been told that the newer FLEX technology has pretty much replaced it. If it is yet around, would like to know what freqs are still in use.

Thanks.

Denny,
Try here:
http://www.perconcorp.com/SCRIPTS/FOXWEB.EXE/PROCMENU?\0\FCC\SPECTRUM\SPECTRUM\SPECTRUM

You can look up frequencies just about any way one could want.

Hope this is as useful to you as ut was to me.

5931. Batteries for Icom R-10

Newsgroup: rec.radio.scanner
Date: 1999-12-12 00:00:00 UTC
From: Greg Pratt <gp@home.com>
Message-ID: <g8375s856pastii5dr0vmoar9mvck0p4gj@4ax.com>
Source record: 99976

Hi everyone.....I would like to know if anyone has tried using
Nickel Metal Hydride (Ni-MH) batteries in their R-10.

I'm wondering if the radio is capable of running on them, and if they
fit properly in the battery compartment.

Thanks,
Greg Pratt

It should not be a problem with Ni-MH batteries.
I use them in my R-10, but you must have a charger for them.
Don't use the original. And buy at least 8 - 12 batteries. As you know the
radio is not very economical in batterylife.

>going on....you'd think they would know....

I don't condone this, but some have taught these idiots a lesson by denying
they ever got the package. If they're stupid to just drop and run,
obtaining no signature, then it's their faults entirely if the package gets
stolen off your front, or even back, porch.

I am looking to trade for Drake SW2, R8, FRG-100, or ????? Must be in excellent cond.

I have to trade: Yaesu FT-50RD dual band HT in excellent cond. with two 5 watt batteries, Diamond
SRH519 wide band rx antenna, cigarette lighter adap., deluxe keypad, SMA to BNC adap.,
CA-15 base charging stand, MFJ295 speaker/mic. This dual band HT has wide band rx and
full 800 MHz rx. Have box and manual. It is in excellent cond. I seldom use it. All this bought
new would be about $400.

Also to trade: Sony 7600G with AC adapter. I bought this radio new this year. It is in excellent cond. Have box and manual.

Will consider give or take some cash also. What do you have in excellent cond.? Would consider Sangean ATS909 and a scanner or ?????

5955. Yaesu VR-500

Newsgroup: rec.radio.scanner
Date: 1999-12-13 00:00:00 UTC
From: John Elmore <jelmore1@bullitt.net>
Message-ID: <eYj54.613$KQ4.757@news2.randori.com>
Source record: 99800

Has anyone tried one yet ? Pro ? Con? How does shortwave compare to other small receivers ?
Thanks.

Consider alternatives to the AR16. The AR16 I tested had inadequate
audio.
The battery saver caused a repeated "pop" noise in the audio making it
all but
unusable.

You cannot program the search limits without a computer and the proper
software.
The AR16 squelch is "automatic" -- a euphemism meaning
you have no control over it. Ours missed weak signals.

Cell coverage aside, the ICOM IC-R2 and Yaesu VR-500
deserve your attention.

John,

I own an IC-R2 and recently tested a VR-500.

The VR-500 and IC-R2 are both "keepers," though there's
currently a $150 difference between them in street price.

The VR-500 has lots of positives and a few blemishes:

1) the stock antenna has a performance null near 159 MHz
which extends a few MHz in either direction
2) the VR-500 I tested doesn't have as good intermod immunity
on 800 MHz as the IC-R2 and other models
3) there are a few "holes" in the UHF frequency coverage

Shortwave performance is on par with other wide band palm sized
scanners.
The selectivity is broad for listening in a crowded band.

I measured the IMD DR (dynamic range) and it's poor compared to
a table top SWL radio. Thus, the VR-500 is easily overloaded if
you connect it to a full size antenna, like a 132 foot dipole.
Works better using a 5 foot hunk of wire. It's great to have USB/LSB/CW
capability for SWLing.

The VR-500 employs a BNC antenna connector, much easier to mate than
an SMA connector.

I prefer the IC-R2 audio, though the VR-500 audio isn't bad.
The IC-R2 squelch tail (noise burst at the end of each transmission) is
much shorter than the tail on the VR-500 I tested.

Watch for my review in Monitoring Times magazine.
If you get one, please let us know how you like it.

I have watched these doom and gloom postings for some time. It's true that there will be a time when a lot of this stuff goes to all digital. It's inevitable. Digital is more spectrum efficient and analog systems are not going to be manufactured in the not too distant future. There is money in digital. Get used to it.

I still maintain that this will not happen as quickly as we would be led to believe. These systems are incredibly expensive and small departments and even most large departments simply cannot afford them. My own community is a case in point. Even with Government grants, they still have to cough up over $10 million bucks for a new state-of-the-art radio system to cover the county. It is one of the largest problems with a Government merger proposal that is on the table here.

The big equalizer is going to be the news media. When towns go digital, the news media loses its ear into what the police are doing as well. I am just waiting for a legal challenge to routine communications being kept from the public. Every day it seems there is another corruption scandal or some sort of problem that diminishes the public confidence in Law Enforcement. Some reporter somewhere will get hold of some tapes of communications that are incriminating and the debate will start. I am surprised this has not already happened. I don't pretend to be plugged in everywhere so it could be happening somewhere. If someone knows about a challenge like this, please let us know and keep us informed.

We as scanner owners will not be able to fight this. I have my own opinions about where and when we lost our credibilty but my asbestos suit is now illegal so I'll keep that to myself for now. Write me and I'll share it privately, maybe. The fact remains that the public and Congress see us as a bunch of anti-Government lunatics and voyeurs. We have zero credibilty in Congress.

The media will have to take the lead because they have the credibility. The media can say that they (and in turn the public) have a right to know what the police are doing. I think this will happen eventually. It's starting to become obvious that there are large departments that are clearly out of control. This thing of justifying all the secrecy in the name of Officer Safety is only going to go so far. The police need to remember that they do work for the General Public and that we have a legitimate right to know what they are doing and to form our own opinions about their actions.

Everyone said that there would never be trunking-capable scanners and here they are. There is a market for this stuff so digital-capable scanners will be available. It will take time but it will happen. I can even envision departments realizing that they have a revenue source there and marketing their routine stuff as entertainment.

Besides, have you ever scanned FRS at a mall or any sort of big event??? Talk about bringing new life to scanning. I hear more good stuff on there than I can hear in six months of traffic stops and warrant checks which is about all you hear any more on open police frequencies. Between that and the so-called GMRS VHF-UHF stuff you can hear about most anything that is going on in a much more digestable form than most cop traffic. There is a lot more on there than the cops.

Things might get worse but I think they will get better. Don't EBay all your gear just yet.

Charlie,

You are correct. A non Trunk tracker can not follow conversations or
monitor talk groups but it will receive the freqs. I use the BC895XLT
for trunk tracking but it's quickly become antiquated by the newer
models. I suggest you visit

http://www.strongsignals.net

this site will give you a comprehensive view of the latest and best
Trunk trackers.

I've got to admit, those are great little radios!
Me and a friend tested out the 500mw version
with CTCSS coding on his 20 acre property. I was
impressed. From shop to metal barn, extreme sides
of property also, the sound quality and reception
was flawless. They're definitely worth the small
investment. For once, Radio Shack came thru with
an excellent idea! Also, on road trips between
OK and TX, our miniature convoy stayed in touch greatly.
I like these little radios. Buy one.

<<<snip>>>

Michael,

I hope that you are correct about the overall trend, but I'm afraid that our community is a counterexample to your expectations. With luck, though, other communities may learn from our experience and avoid making the same mistakes.

More than two years ago Livingston County accepted an offer from the Michigan State Police to lease radio services on the new statewide digital 800-MHz system. The county, and every PD in the county, abandoned the former analog frequencies and converted completely to the digital system.

It has cost us a fortune. I estimate each household has paid $200.00 in property taxes for new radio equipment, and we now have a monthly telephone surcharge of about $4.00 per line to pay for the added expenses of 911 dispatch service. But the system doesn't cover all areas of the county because the state-wide system doesn't include a tower in the county. We now face a $1,000,000 upgrade to build a new tower and repeater at our own expense.

I am doubtful that the digital system will ever perform as well as the former analog system. No one has good things to say about system performance, and we can't hear the on-air gripes any longer :-(There have been recriminations made against Motorola as the system contractor, including communities threatening to withhold payments, but there appears to be no recourse other than to spend more money.

The only benefit anyone has claimed for using the digital system is privacy. The local media have endorsed the system since the beginning. Our only local newspaper printed articles chuckling about scanner listeners being shut out.

With luck, the experience here will help other communities avoid making the same expensive and dangerous mistakes.

Wishing us all good listening for a long time,
Charley Harp, N8MQL

Actually the first 5 FRS freqs are also GMRS freqs.
By process of elimination you can set the "quiet code"
to the same CTCSS code they're using and you can really
annoy the hell out of construction companies and real estate
offices. They don't like it at all.

Scott, is this a 5 watt sold buy Radio Shack? One of my friends is in love with these radios and
he is looking for a stronger one than the 2 or 2.5 watt ones that best buy and others put out. He
found one 5 watt, not through radio shack. But all these radios said a license was needed. We
didn't know what we had to do to get the lic. Any help would be appriciated. Ryan

Hey,
My friend was looking for some info on the Family Radio Service. He has found that some of the freqs are GMRS also. He has a 2 watt motorola unit and recently found out that a company makes a 5 watt unit. All the info we found says you need a lic. from the FCC. Does anyone know how you get such a license? Also, is there anywhere you can buy these 5 watt units? Thanks, ryan

No where. The previous poster is probably thinking about the PRO-94.

This one is a one half watt radio. No license is required
for FRS operating at .5 watts. I also have a set of VHF
business class radios witch operate at 5 watts which I
have operated without having a license. 5 watts is
absolutely necessary when your trying to reach a repeater
located on a tower many miles a way but for close range
point to point communications a half watt system is
adequate and doesn't require a license. Now if you
want to get licensed for business class radio, there's
a fee and application to fill out. Again, I wouldn't
bother with a business radio unless you are planning
on using a repeater service for city-wide coverage.
Most people using 2 way radio for personal use have
no need for a business radio. I personally like the
FRS (low wattage) radios because they're very inexpensive
to purchase and operate and they're fairly reliable.
It just depends on what you intend to use the radio
for. I wouldn't mind having a higher powered radio
on the FRS freqs so that I could mount a UHF antenna
on the roof and have enough power to run thru the
coax cable but that's another story. I will prolly
have to wait until the FCC approves UHF CB radio
which has worked out very nicely in Australia. The
FCC is very backward in this country, they don't
trust the public and are afraid that the entire
UHF band will be ruined if they free up GMRS
for public use.

I have 3 Hamsticks. Two for more than 10 years. Dont like most on-the-glass antennas though no experience with yours.

Have 9' 15m whip that I cut the coil out of and mounted home wound "bug-catcher" for multi-band. Been in the air for 10 years w/no spring either mobile or base. For 40/80 it gets bent over into an inverted-L with extra 25' wire from end of whip to pulley/mast on the other side.

Also a 9' 2m Co-Linear (9007) w/out spring for 8 years (look out for metal fatigue on fender) w/no breakage

However, I have heard of FG whips break from being hit by flying pebble.

For the price they are quite durable if not disposable.

GMRS is, and has been, available for general public, non-business use. You do have to obtain a license, but no test, or special conditions, are required, just that you DO NOT use it for business. Changing an antenna on a FRS radio is illegal under the terms of the FCC laws.

You do need a license to operate on the GMRS freqs with anything over .5W.
The FCC site you can visit for more information is
http://www.fcc.gov/wtb/prs/genmbl.html . You can buy handhelds from any
business radio company. Try
http://members.aol.com/crobbinsnc/radioaol.html for used radio gear, or
http://www.gmrsweb.com/gmrs.html for more info about GMRS and FRS radios
and their respective services.

Regards,
Tony

Warren Michigan Police & Fire use the Motorola Type-II Trunked system, and yes, you can listen to anything on those assigned frequencies without the need for a trunktracking scanner. The problem is you hear it ALL, not just the talk groups you want. So you also hear the DPW, the Water Department, etc. They do reassign their data channel every evening, which only requires you to un-L/O the previous one, and L/O the newly assigned one. A trunktracking scanner gives you the luxury to L/O those talk groups you don't want to hear, and automatically re-assign the data channel, at least with the Uniden TT's. The new R.S. PRO-92, requires you to manually L/O the data channel every time you turn it on.

Kurt,

Please accept this as a constructive suggestion. It would be far more considerate to post a link to a large document, such as the 473KB .pdf of Part 95, than to attach it to a posting here. When I clicked on your posting my computer was captured for about ten minutes while my poor 56KB modem strained with the download, and Outlook Express would not permit me to interrupt.

Thanks for being considerate next time,
Charley, N8MQL

6007. Missing Fast Food Frequency Pairs

Newsgroup: rec.radio.scanner
Date: 1999-12-13 00:00:00 UTC
From: "Robert H. Eisner" <rheisner@earthlink.net>
Message-ID: <385592BE.2B54@earthlink.net>
Source record: 99891
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hi All,

I'm currently in the process of updating my Fast Food Frequency List for the USA and would like very much to fill in some of the gaps and missing pairs of frequencies that have been outstanding the past few years. I've managed to match up about 90 percent of the frequencies that have been reported since 1991. The 5 frequency pairs that I've been unable match up are 31.240, 35.120, 35.880, 35.960 and 453.5125.

I'm pretty sure that the 4 VHF-low frequencies are each paired with one of the following 151.745, 151.775, 151.805 and 151.835. The UHF frequency is most liked paired with a frequency in the 467 - 469 Mhz range. Please note that I've already checked the 453.5125/467.7375 pair which was confirmed a couple of years ago and it's NOT the one that I'm looking for.

Anyway, I would be very interested in hearing from anyone that may have some additional information on the missing frequencies. I'm also interested in the any URLs that point to other Fast Food List on the WEB.

For those of you wondering "Why would anyone want to listen to Fast Food Drive Thrus?" please review the following answer which has been posted numerous times to this group(s) in the past.

http://www.deja.com/[ST_rn=ps]/getdoc.xp?AN=548568676&fmt=text

ps: A fairly current list of Fast Food Frequencies can be viewed at the following URL http://pages.prodigy.net/hounddog/fastfood.txt

T.I.A.

Bob

==========

The frequency pairs marked with an "*" are either odd or missing.

Headset/Speaker frequency pairing for VHF-low / VHF-high band:

Speaker Headset

30.840 - 154.570
31.000 - 170.305
31.240 - ???.??? (151.745 or 151.775 or 151.805 or 151.835)

6010. Pro-92 vs. Uniden BC-245XLT (Uniden won)

Newsgroup: rec.radio.scanner
Date: 1999-12-13 00:00:00 UTC
From: Greg Davis <gdavis9999@my-deja.com>
Message-ID: <831hqp$7d6$1@nnrp1.deja.com>
Source record: 99924
Cross-posted to: alt.radio.scanner,rec.radio.scanner

As you have seen from my earlier posts, I gave the Pro-92 a very good try. Took it back today. I used it to monitor and conventional freqs here in the North Dallas area-- there is PLENTY to listen to. Anyone in this area requires the very best scanner if they are serious about this hobby. Mostly, I listen to Plano and Richardson, Texas trunked (Mot and EDACs systems), while monitoring North Dallas conventional freqs and DFW air traffic. I am also involved with the Plano Police Department, I needed a very reliable monitoring system.

I thought I would post my final decisions, it may be of help to you (although every system/area varies).

I got a BC-245XLT (from Sears) and programmed it just like my Pro-92. I used every bank (expect one). So the Pro-92 took about 8 hrs total program time (not including learning the unit operation). Combined, I spent over 15 hrs to get my skill up and to configure the scanner (those Alpha tags take a while, especially without a computer cable!). Total $$ spent including scanner, hi-cap Ni-Cads, NiMH batteries, two wall chargers (300 and 800 mA), dual-band ham antenna, leather case, RS freq guide, cig lighter adapter, etc.... I spent a total of approx $500.

The Uniden cost about $250 including all accessories except the case and cig lighter DC cable.

Since I already had the Pro-92 I did a good side by side comparison with the Plano-MOT and Richardson-EDACs systems, as well as conventionals, air, and business 800.

Well, the BC-245XLT blew away the Pro-92 IMHO. And I plan to keep the Uniden 245XLT. Here are my first impressions. I know there are lots of comparisons on the internet, so some of this is repeat-- what I list is just the biggest differences to ME:

Where the 245XLT beats the Pro-92
- cost
- computer control (just started to use this, very, very interesting)
- back light better, also has auto light (which does not always work so well)
- MUCH BETTER SENSITIVITY on 800, 460, and even AIR (AM)
(I did a lot of side by side tests using the same antenna for comparison, the 245XLT beat out the Pro-92 every time, even with the respective OEM antennas that came with the units
- MUCH LESS drop-outs (this was unacceptable on the Pro-92-- I kept missing transmissions). And the Uniden never abandoned an active talk group early, since it's listening to the control channel, not the sub-

audible coding
- smaller, lighter (I actually like the look better)
- simpler to operate (more intuitive), althought the manual is very BAD
- receives EDACs much better
- quiet in idle mode (the Pro-92 has an audible cycling hissing)
- duplicate channel detector (I was surprised how often I had duplicate channels in the Pro-92!, since I used that radio as a guide to program the 245XLT)
- a priority channel for EACH BANK, and a priority talk group ID for EACH TRUNKED SYSTEM

Where the Pro-92 beat the 245XLT
- easier to purchase (there is a Radio Shack on every corner, many of the Sears stores are not stocked well with the 245XLT)
- LCD viewing angle much better (you can only view 245XLT from certain angles)
- better audio, although not the differance I thought it would have
- ALPHA TAGS- VERY GOOD
- Batteries- I like the tray approach to control WHAT kind I use, and if they run down, you can use Alkalines

Anyway, these are just some thoughts. Before you flame me, my intent is not to over-promote the 245XLT, but to simply share my experiences with the hours and hours of evaluation I did to pick the best scanner for MY needs. Your needs may, and probably will, vary.

Thanks and Best Rgds,
Greg

6017. Austin TX - Article on City's Proposed Radio System

Newsgroup: rec.radio.scanner
Date: 1999-12-13 00:00:00 UTC
From: Robert Barker <rbarker@austin.rr.com>
Message-ID: <JiY44.1100$PM2.68486@typhoon1.austin.rr.com>
Source record: 99931

From: "Robert Barker" <rbarker@austin.rr.com>

I just stumbled on an article in this weeks Austin Chronicle regarding some of the same stuff I have been ranting about the last few weeks. I had nothing to do with this article.. check it out for yourself:

http://www.auschron.com/issues/dispatch/current/pols_feature3.html

It basically talks about the radio team that was formed years ago and has tried to create such a mammoth radio system that many of the other agencies are tired of waiting and tired of all the politics.
Some the best quotes from the article:

More than two and a half years after Austin voters approved $38 million in bonds toward the purchase of a new emergency radio system, the network -- which was sold to voters with the promise of being fully operational by 1999 -- is still at least THREE YEARS away from installation.

Public safety entities could not communicate directly with one another.

(* Uh.. they still won't be able to on the new system.. Williamson County EMS cannot talk to Round Rock Police or to the Sheriff's Dept. They don't know how and they don't do it.. even after stuff like Jarrell, when the radio system went down. There has been a lot of talk about "public safety common" channels but it just will not work. Every agency wants to remain on their dispatch channel. The only way it will work is if all the dispatchers come to that channel too it just does not happen*)

The proposed radio system is full of expensive and superfluous bells and whistles.......many of Austin's public safety officers have privately come to distrust the purchasing process, and those in the city responsible for what they say has become an exercise in "empire building"

These are management types who don't have to rely on a radio to get them help. Their asses are not on the line. Our asses are on the line and we aren't laughing." Nor were they laughing in December 1996 when a six-alarm fire burned the campus-area Centennial Condominiums. "That was a mess," says

one fire department official. APD squad cars "were blocking the fire hydrants and we couldn't even talk to them directly [via two-way radio] to get them to move their cars." (* uh, see above *)

And no one laughed in December 1997 either, when APD officers mistakenly shot a fellow officer, as well as an off-duty Travis County sheriff's deputy, who was seriously injured, while answering a domestic violence call in Southeast Austin. "It was all caused by the radio system," says an APD officer. "When the deputy was coming out of the house they said, "Cops

coming out,' but the other officers couldn't hear that, so they started shooting. Our radio system is an absolute piece of junk."
(* you think it's confusing now.. just wait until everyone goes to trunking.. Do you honestly think APD and Travis County will come together on the same radio channel.....NOT! They are like cats and dogs.. they do not get along.. and so is the relationship between APD and EMS... they are in the same room at 911 and they refuse to even acknowledge each other.)

With the current network, it is impossible for the area's various public safety entities -- APD, AFD, and EMS, as well as the Travis County sheriff's office -- to communicate directly with one another, a horrifying thought when all three departments are responding to the same emergency call.
(* again, Williamson county has a trunked system but they don't get on the same channel. Neither do the units in San Antonio.. so don't expect the Austin system to achieve this or you will be very disappointed. This can be done with now today using the already existing channels or even tying them together. All you have to do is EDUCATE the agencies on how to do it and convince them that it needs to be done.)

****

This is a good article and it shows some of what's going on in the background. As I have said before, I could come in and serve as a link between APD, EMS, Fire, Travis County, DPS and all the other agencies. This stuff is in my blood. I go crazy when an officer gets into a pursuit and tells the dispatcher to notify the next agency and it's like nothing happens and there is a huge delay. And unfortunately sometimes property and lives depend on it. I totally agree that had APD had knowlege of the Travis County officer on the scene, he would not have been shot. Many more lives could have been saved. and the damage would not have been as bad had there been better communication. This doesn't require a $38 million radio system.

Ronald,

If you use a cordless telephone, your converstion is subject to being received by any nearby scanners that may be monitoring the frequency of your telephone. HOWEVER, If someone does hear your conversation on a scanner, you have no way of knowing. You also would not hear the problems that you are reporting. (Note: On cordless phones, you should always assume that you are being monitored and should never discuss personal information that you don't want others to possibly hear!!!)

Cordless phones invite other problems, though - especially if a nearby neighbor uses a phone on the same and/or near frequencies. In these cases, you could hear buzzing, poor audio quality, or even neighbors' conversations !!!

If you are NOT using a cordless telephone, than I could only suggest making arrangements for repair service for your telephone and/or service, as appropriate.

Good Luck.
Erik

You should always assume that a transmission (from a phone or other type of radio) that goes through the air can/will be intercepted. I assume you are talking abouit cordless phone usage. Eventhough I have a Panasonic DSS, I must assume there is someone nearby with the knowledge of intercepting the signal of my phone and using it for criminal purposes. I do not talk about plans to leave my house beforehand (unless I am on a land line and hope my phone isn't tapped) or about big dollar gadgets I have in my house. A word of advice, I don't even tell my alarm company I will be leaving (for a trip or whatever) for any length of time. You never know where "inside information" comes from that gets to the criminal element. I can only hope my subconscious attempts (they are habit) will safeguard my family from becoming victims of theft. If it does happen, I hope my homeowner's insurance will take care of me.

Body handling: Binary attachment payload not displayed: dbertone.vcf

2 Motorola MTX 9000 portables that are on the 900 mhz ham band in
conventional mode.

These are the B5 models with 6 button keypad and LCD display.

1 is in good shape. The other has a bad display and the case has
somenumbers carved in
it.

Both work fine. I use the one with no display as a 16 channel radio by
just using the
numbers on the channel knob. God bless you if you can find more that 16
repeaters in
your area!

I only have 1 fast charger but the batteries are late date code with
spring belt clips and 1
extra battery.

$300 for everything and I will program or let you do it with my help.

I also have a Motorola Maxar trunking radio that was converted to
conventional ham band
use. I want $300 for it since there is a lot of work involved to
convert radios to 900 mhz.

TRADE for TenTec gear or maybe some other stuff. Send your list

John Elmore wrote:

> Has anyone tried one yet ? Pro ? Con? How does shortwave compare to other
> small receivers ?
> Thanks.

I just purchased a foreign version of the VR 500 and am very happy with it. It actually will function minimally on AM shortwave and broadcast with the stock antenna. I can pick up BBC and some of the power houses with the stock antenna.

I also own a Icom R2 and while it scans well it does function at all on shortwave or AM broadcast without a different antenna.

I went for the foreign version of the VR 500 since there were postings in this NG that the American version was nulled in other spots to avoid cell images. I could care less about listening to cell phones but did not want a loss of performance in other areas. The stock antenna has a null around the U.S. weather band. I thought this was a radio problem at first but have since learned it is the antenna.

The VR 500 is fairly easy to program has an actual key pad and is minimally larger than the Icom R2 although it is almost double the price. The VR 500 like the R2 is a keeper for me.

I found a Pro-23 scanner in a radio store for $39. I have not seen much on this model and wonder if this is a unit worth having. It has been sitting there for some time and I think I could probably get the guy down in price. Any comments would be appreciated. Thanks

New Dutch Software for FREE

Look on http://www.scanner.webfreak.nl/ for Frequentie-base software for scannerlisteners.

The program Frequenty-base was made by Bert. This program is made for keeping your frequenties updated and correct, specially for computer-scanners.
Scanner-base is a handy database, already containing over 12.000 frequenties, that you can
expand as far as you wish. Install notes: Run Setup.
The program is FREEWARE and is FREE to copy and/or distribute.
This means that NOBODY MAY CHARGE ANY FEE, EXCEPT HIS/HER USED MATERIALS.
For suggestions, remarks or questions you can contact Bert > bvdkamp@hetnet.nl

Mvg Eric &#65533;

: Just wondering if the Police have taken to utilizing FRS and Scanners to
listen
: in on the opposition.
:
: I know that military operations have included; plans for signals
intelligence
: and countermeasures, have the US police delved into this area much?

NO. What makes a good street cop and what makes a good Intel
person are two very different skills. Cities hire street cops, who like
action and are often former high school athletes. Intel personnel are
more like geeks who fly desks, going thru piles of paper work or listening
to boring conversions on radios (even Cel-Tel conversations are boring).
Intel personnel are too expensive for most cities to hire.

: I have monitored radio traffic via scanner in disturbed areas around the
world
: and though sometimes restricted due to language barriers, I have found
that
: when someone picks up a radio they often assume it is a private
conversation
: between them and the other party(s).

Particularly Cel-Tel. The idiots think they are talking on a landline.
And then they get pissed when someone has a radio (scanner)
that is able to listen to them. The assholes just can not get it thru
their thick heads that ANY time you talk on a radio, it isn't private.
And a cell phone is a radio.

: Understanding the fervor that could be raised if the police start or there
: comes to public light a sophisticated "eavesdropping unit" at work
domestically
: there may be protests louder than Seattle.

They would shit their pants if they knew how many agencies do
listen in. Often for practice.

: As for the protest,
:
: What frequencies are the police using?
:
: Any other frequencies being used by protesters?
:
: Media frequencies, any available?
:

: Fire and EMS for that area?
:
: National Guard?

National Guard Intel personnel are not allowed to have
equipment that will used for listening to civilians frequencies.
If the police want to buy it, the Guard can provide personnel
to operate it. But they can not execute a wiretap or a warrent.

: Any frequency or related information posted here would be appreciated.
:

Karl Dahlquist <karldahlquist@vistagroupusa.com> wrote ...

It does look like it is the liberal politicians who really screwed
the pooch in Seattle.

:
: Police officer blames city's poor planning
:
: Saturday, December 4, 1999
:
: By BRETT SMITH
:
:
:
: Editor's note: Brett Smith is a 10-year veteran of the Seattle Police
: Department, stationed in the West Precinct. This week, the former
University
: of Washington football player stood on the volatile front lines of the
World
: Trade Organization protests -- downtown and on Capitol Hill.
:
:
: Brett Smith Robin Layton/P-I
: Taunted and spit on by demonstrators, Smith's squad was one of the first
to
: use tear gas and make arrests. Upset over Mayor Paul Schell's apologies
over
: police actions, he felt compelled to speak out.
:
: This is his account, which he provided to P-I reporter Dan Raley:
:
: This started at roll call in September when the mayor came to talk to us,
to
: let us ask questions about WTO.
:
: Officers told him we don't have the right equipment. We were worried we
: weren't going to get the hockey gear, the shin guards, that we needed or
: that only certain people were going to get it. The mayor got defensive. He
: started berating officers. He said, "If you can't do the job, we'll get
: somebody who can." To me, that was so unbelievable.
:
: In October, we had our mandatory nine-hour riot training and Assistant
Chief
: (Ed) Joiner was there. We had a question-and-answer session. Someone said,

: "Don't we expect violent protests?" He said, "No, there's nothing to worry
: about. It won't be violent."
:
: Questions were asked in so many ways about how we were prepared. In
reading
: the papers, the protesters had said they were going to disrupt the
meetings
: and we had better be prepared. There was no doubt in my mind, we weren't
: prepared. We heard that officials from Geneva, where the WTO had been held
: before, had offered to tell us what happened and how they dealt with it
and
: the department said, "We don't need your assistance, we've got it
covered."
:
: We had some follow-up meetings and an officer whose brother works for King
: County said there was FBI and Secret Service in their riot training
sessions
: and they were told to fully anticipate that five to six officers would be
: lost during the protests, either seriously injured or killed.
:
: We asked about this and were told by our commander not to spread rumors.
We
: knew it was true, that the King County officers had been told that, yet we
: were sitting and hearing nothing was going to happen. We felt like the
: department wasn't sharing everything with us.
:
: I was in the trenches for two days and I was in the middle of it. Whenever
: we used tear gas or bullets with pepper gas, we warned people. We gave
them
: five minutes to leave. When the first gas was deployed, we already were
: getting bottles thrown at us. That's what's bothering me: Now we're being
: the ones accused of causing this, and we were told in our meetings, "Don't
: be the spark."
:
: Nothing but professionalism was displayed by our officers. There was
: incredible patience as we took taunts and had things thrown at us. There
was
: a bottle that was thrown at me and missed, cutting another officer. There
: was a guy spitting at me and I couldn't do anything. I couldn't be the
: spark. I took it.
:
: To hear how the officers were out of hand is hard to take. We were ordered
: to hold our ground. It was embarrassing for me as a police officer to see
a
: foreign delegate, 3 feet away from me, getting grabbed by protesters and
: pleading with me to do something, and I had to hold my ground.
:
: There were no contingency plans for breaks or food, and that was
: demoralizing. We were told we would get one meal for every 12 hours we
were

: out there, but we weren't fed, not until the state of emergency was
called.
:
: The people at the Sheraton were great; they brought sandwiches down to the
: line and fed us. In roll call, we were told there would be accommodations.
: What we got were a couple of chairs in the parking lot of the convention
: center, and a cold parking garage, with no heaters and no carpet. Or we
got
: five minutes on a knee. Right away, they're treating us like second-class
: citizens. There was no plan to clean our uniforms if they had tear gas on
: them. So the next day, we went out there with tear gas on our uniforms. We
: weren't prepared.
:
: Before the WTO conference, all we were saying was, "We needed to be
: prepared." But it seemed like they closed their eyes and said, "I hope
: nothing happens, I hope nothing happens."
:
: I feel the field commander, Capt. (Jim) Pugel, did an excellent job. He
was
: a great leader. We had confidence in him. Our lieutenant, Mike Sanford,
also
: did an excellent job. But they didn't seem to have support. There was no
: command center to tell where all the troops were. Our leaders in the field
: did the best job they could.
:
: We're so upset our squad of 10 or 11 wants to do our own protest march
when
: this is all over. After being on the front line, I just want to say, "You
: know, mayor, if you feel you can't do the job, maybe you should find
: somebody who can."
:
:
:
: -----------
:
:
:
: City rejected offers of help even as tear gas filled streets
:
: Schell's gamble undercuts police; preparation, leadership lambasted
:
: Saturday, December 4, 1999
:
: By MIKE BARBER
: SEATTLE POST-INTELLIGENCER REPORTER
:
:
:
:
:

: Seattle's mayor and police chief were offered help from Attorney General
: Janet Reno and Gov. Gary Locke as tear gas began to fill the city's
streets
: Tuesday, but they initially rejected it.
:
: They also had received warnings from police rank and file that the
: department was ill-equipped and undermanned to handle protests. But Mayor
: Paul Schell and Chief Norm Stamper disregarded those apprehensions.
:
: For more coverage, see our WTO index.
: Also see our WTO photo galleries.
:
: --
--
: ----
:
: "Schell rolled the dice that we could pull this off peacefully and lost,"
: said a veteran police official with knowledge of the planning process, who
: declined to be named. "He thought it would be a great coup to host such a
: large convention without much police presence."
:
: Many of the officers on the front lines of the chaos on Seattle's streets
: this week say they feel betrayed.
:
: From the start, King County Sheriff Dave Reichert said Schell sent
messages
: contradictory to the concerns of law enforcement.
:
: A week before the World Trade Organization conference began, Reichert
: recalls, "I told people not to come downtown -- it would be more than
: inconvenient. The next day, the mayor says, 'Come down and shop; it will
be
: just fine.' He didn't have a clue."
:
: Reichert, who broke ranks with top brass in publicly criticizing Schell,
: promised to address deeper concerns about planning -- or lack of it --
next
: week. "I intend to say a little more about some of the frustrations we
: experienced with WTO," said Reichert, who placed 300 of his officers under
: Seattle's command.
:
: King County police then and now had a supporting role with the city, who
: held the ultimate command, and Reichert indicated he wasn't pleased with
the
: leadership of Schell.
:
: Schell denied that he had turned down offers of help and that he had
ignored
: early warnings that the city was not prepared.
:

: The city eventually accepted the offer of aid from Locke. But that didn't
: happen until Tuesday afternoon and the 200 unarmed National Guard members
: did not show up on the streets of Seattle until Wednesday morning.
:
: The attorney general's offer of assistance was never accepted, law
: enforcement sources said.
:
: Schell disputed those accounts last night. "I doubt we would have turned
: down help from anybody," he said.
:
: He also defended the city's planning and defended the officers on the
: streets.
:
: "I've been out there talking to them," he said. "They feel abused by the
: media, not supported by the mayor or their chief.
:
: "I expressed my regrets (to) people here in our city who were innocently
: involved and suffered from the use of tear gas, pepper spray and other
: necessary measures. People may have taken my apology as a statement that
: police overreacted and that is not the case. These tactics were
unavoidable
: and appropriate," he said.
:
: Schell also said the department was well-prepared and well-equipped from
the
: outset.
:
: "We've given them 'robo-cop' material. We've spent considerable time
: training them to expect violence," the mayor said.
:
: "Everybody, including the King County sheriff, was involved in the
planning
: with the FBI, Secret Service and state police. There was extensive
planning
: for all contingencies and possibilities."
:
: But for many law enforcement sources and officers who worked the front
: lines, plans seemed in disarray from the very beginning Tuesday.
:
: What was perceived as a hands-off police approach as protesters began
: gathering around the Washington State Convention and Trade Center Tuesday
: morning was actually an unprepared department watching Schell's gamble
fail,
: law enforcement sources said.
:
: Police were unable to form safe-passage corridors for dignitaries or even
to
: physically protect them from heckling crowds. It frustrated and alarmed
the
: Secret Service and other agents protecting the foreign ministers,

: ambassadors and other diplomats among the WTO representatives here.
:
: The level of preparedness was so flawed that when police decided to use
: pepper gas and rubber bullets to compensate for their small undermanned
: numbers, they had to beg and borrow.
:
: Law enforcement sources said a policy decision had been made to
dramatically
: cut the supplies of pepper gas recommended by a consultant advising the
: department how to prepare for the WTO conference.
:
: Some sources said the consultant's recommendation for $100,000 of pepper
gas
: was cut to $20,000.
:
: Police officers who were on the front lines of the melee ran out of
: department-issued pepper spray and tear gas midafternoon Tuesday.
:
: A handful of officers took matters into their own hands, getting
permission
: to empty the munitions stores of police departments in Auburn, Renton and
: Tukwila, the King County Jail and the Department of Corrections. In
: addition, some drove around in a sport-utility vehicle to buy chemical
: agents from a local law enforcement supply business.
:
: Meanwhile, a police captain flew to Casper, Wyo., to pick up a stock of
gas
: from federal agents.
:
: Once officers had collected several hundred canisters of pepper spray and
: tear gas, they drove the supplies as close to downtown as they could get.
:
: Plainclothes officers then loaded the non-lethal munitions into gym bags
and
: knapsacks and ran through the crowds to deliver them to waiting uniformed
: officers barricading protesters outside the Sheraton Seattle Hotel &
Towers
: at Sixth Avenue and Pike Street.
:
: "Those protesters could have stormed any location while we were out of
: supplies," one officer, who declined to be named, said in disgust
yesterday.
:
: "We just didn't have the resources we needed when the time came," another
: officer said.
:
: Lisa Ross, a spokesman for the Police Department, acknowledged that "we
were
: running out of OC."
:

: Stamper declined to be interviewed about criticisms of his role in the
: events.
:
: Ross said the chief expected detractors, but that he has supported his
: officer's efforts all along.
:
: Several police officials and rank-and-file officers say Schell ignored
their
: requests for more equipment as far back as September. When officers voiced
: concern, Schell berated them, telling them to look elsewhere for
employment
: if they couldn't do it "his way," said several sources who were there.
: "Months ago they said they were going to shut down the city, not just the
: WTO, but the city," said an angry Seattle police officer who declined to
be
: named. "Lots of warnings were there."
:
: But by the time police finally could act with all their officer-safety
: precautions in place, it was too late. Outnumbered officers said they were
: faced with an uphill, confrontational battle later in the day, when parts
of
: the demonstration lost its focus on WTO and turned to vandalism and
: confrontations downtown. In violation of police procedures, few slept or
: ate.
:
: "I was so tired I was nauseous," said a Seattle officer who spent nearly
20
: hours on the streets.
:
: Those working close to them, who were also suddenly pressed into service,
: saw the strain on the faces of officers pushed to incredible limits and
felt
: it themselves. Joan, a 55-year-old Metro bus driver, who declined to give
: her last name because she had been threatened by anarchists, saw her bus
: suddenly pressed into service as a 40-foot patrol car.
:
: All day Wednesday, she ferried 30 tired King County sheriff's tactical
team
: members, 26 men and four women, from one trouble spot to another.
:
: "I wasn't prepared for it, but I wound up feeling like their den mother,"
: she said. "You could hear the exhaustion in their voices. They had been up
: for 36 out of 48 hours. They had eaten once Tuesday and nothing at all
: Wednesday."
:
: Police sources said keeping officers on the lines for so long put everyone
: at risk, because tired officers are either more prone to being harmed or
: losing patience with protesters.
:
: --------------

:
:
:
: Schell and Stamper can expect to be severely criticized
:
:
: Saturday, December 4, 1999
:
: By HEATH FOSTER and KERY MURAKAMI
: SEATTLE POST-INTELLIGENCER REPORTERS
:
:
:
:
:
: It's unlikely the wishes of protesters who waved "RECALL SCHELL" signs at
: yesterday's peaceful labor march will come true.
:
: But the beleaguered and disillusioned Seattle mayor is headed for tense
: times in the months to come.
:
: The World Trade Organization conference and resulting "Battle in Seattle"
: has seriously shaken confidence in Schell and his strategist, Police Chief
: Norm Stamper.
:
: For more coverage, see our WTO index.
: Also see our WTO photo galleries.
:
: --
--
: ----
:
: Ask the citizens who watched the havoc from their living rooms. Poll
: downtown business owners who lost as much as $22 million in sales. Or talk
: to the labor and environmental groups whose protest messages were drowned
: out by concussion bombs. The universal response: this week was an
: unmitigated disaster.
:
: Schell last night stood by the decisions he's made, but said he knows he's
: likely to see missteps more clearly once he gets some perspective on the
: week's events.
:
: "I'm sick about it," he said in an obviously pained voice. "But I'm doing
: the absolutely best I can."
:
: But Schell's repeated apologies this week to business owners, WTO
delegates
: and innocent bystanders won't likely dampen the criticism.
:
: The City Council has already scheduled the first hearing to investigate

the
: way Schell and Stamper planned for the protests and how police conducted
: themselves during the week. Public comments will be taken at 4 p.m.
: Wednesday at City Hall.
:
: Schell is likely to come under intense pressure to fire Stamper, who many
: blame for underestimating the risk of violence, which may have fueled
chaos
: on the streets.
:
: Former Mayor Wes Uhlman, who weathered Vietnam War demonstrations during
his
: eight years in office, said Schell was right to rely on Stamper for
tactical
: planning, but that Stamper made huge errors in judgment and Schell has no
: choice.
:
: "The police officials have admitted publicly that they screwed up," Uhlman
: said. "If this happened in a company, they would get rid of the CEO. In th
is
: case that's Stamper."
:
: But if Schell manages the crisis well, restoring order downtown and
building
: faith in the Police Department, he's likely to weather the crisis.
:
: And as for the Emerald City, political scientists agree the city's
: reputation as one of the nation's most livable metropolises can withstand
: the beating. They say the Battle in Seattle will, like the General Strike
of
: 1919, become an important and even proud part of Seattle history,
especially
: because more than 50,000 people poured into Seattle's streets and not one
: was killed or seriously injured.
:
: "Seattle is one of the great American cities, and the events of the last
: week have not in any way diminished that," said Rep. Dennis Kucinich,
: D-Ohio. The former Cleveland mayor watched police manhandle Seattle City
: Councilman Richard McIver as he was trying to attend a WTO function (see
: related story).
:
: "You had 100,000 people come to Seattle and a few of them were violent,"
: Kucinich said. "Seattle came out as the city that was at the forefront of
a
: new social movement concerned with lifting the economic condition of
people
: around the world."
:
: Kucinich points out that the despite the violent riots that rocked Chicago
: during the Democratic Convention in 1968, the world still considers it a

: great city. Chicago voters overwhelmingly re-elected Mayor Richard Daley.
:
: "Seattle should stop beating up on itself," he said.
:
: Added Bob Watt, director of the Greater Seattle Chamber of Commerce: "A
lot
: of the 2,700 members of the Greater Chamber are feeling shock, anger,
fear,
: economic worry. But they're also feeling grateful . . . that with the
level
: of violence, no one got killed."
:
: Seattle figured it was ready for the WTO conference -- until the second
day
: of meetings. Early in the day, demonstrators were happy, even celebrating.
: But they far outnumbered police, and they blocked the Washington Trade and
: Convention Center in an effort to shut down the WTO.
:
: Delegates couldn't get into the Paramount, and opening ceremonies were
: canceled.
:
: Authorities decided they were too short-handed to protect the street and
: also arrest hundreds of protesters. When protesters refused to disperse,
: police moved in. With the nation watching, police fired tear gas and
rubber
: pellets.
:
: A roving band of self-styled anarchists rampaged through downtown,
smashing
: windows.
:
: Late Tuesday, police cracked down, using tear gas, concussion grenades and
: rubber pellets in a series of ugly confrontations. Schell declared a civil
: emergency and ordered the first curfew since World War II. He asked for
: additional state and federal help, and on Wednesday morning about 200
: National Guard troops and 300 additional Washington State Patrol troopers
: arrived in Seattle.
:
: On Wednesday, President Clinton came to a locked-down city with a 46-block
: downtown "no protest" zone where police waded into crowds, arresting more
: than 500.
:
: Peaceful protests returned Thursday, and Schell trimmed back the
no-protest
: zone and ended the curfew.
:
: The dramatic events have left Schell and Stamper wounded in the eyes of
the
: public, and a surprising number of people are willing to pummel them.
:

: "They should resign," said Moti Swissa, the owner of the jewelry store
: Swissa Inc. on Fifth Avenue. "They screwed up big time."
:
: Jim Kneeland, a Democratic political consultant and Schell supporter, said
: working at his office near the convention center gave him "new sympathy
for
: the people in Sarajevo."
:
: Kneeland said he was frustrated that Schell seems out of touch with those
: who paid the most for the WTO chaos -- thousands of low-wage workers in
: downtown stores and restaurants who won't get paid for this week.
:
: Yet, Kneeland predicted Schell will survive if he brings business back
: downtown and demonstrates that he's learned from the mistakes of his
Police
: Department.
:
: But so far, Schell has shown no willingness to criticize Stamper or his
: officers. "Yesterday, I expressed my regrets that people here in our city
: were innocently involved and suffered from the use of tear gas, pepper
: spray, and other necessary measures," Schell said. "People may have taken
my
: apology as a statement that police overreacted and that is not the case .
.
: . Those tactics were unavoidable and appropriate."
:
: And then there's what's being called "the McIver incident." When McIver
: attempted to enter a WTO event Wednesday night, he was told to get out of
: his car and was handcuffed by police. Council President Sue Donaldson said
: the incident wouldn't have happened had Schell bothered to get WTO
: credentials for council members.
:
: Yesterday, the National Association for the Advancment of Colored People
and
: Seattle Urban League called for an investigation of the incident,
believing
: McIver may have targeted because he is black, or because of past criticism
: of police treatment of minorities.

New York City Transit Authority (NYCTA) Frequencies

NYCTA uses 127.3 CTCSS.

The train-to-dispatch and dispatch-to-train frequencies and the yard channel
are the most heavily used from an operational standpoint, and of the greatest
interest to scanning enthusiasts. All frequencies in Table 1 and Table 3 are
fully receivable in the subway.

Frequencies for the portables and luggables (all use PL 127.3):

161.19 Division A dispatcher-to-train (former IRT division)
158.88 Division A train-to-dispatcher

161.505 Division B1 dispatcher-to-train (former BMT division)
158.775 Disision B1 train-to-dispatcher

161.565 Division B2 dispatcher-to-train (former IND division)
158.805 Division B2 train-to-dispatcher

160.845 Yard IND BMT IRT
Table 1

Other NYCTA Frequencies (PL 127.3):

156.1050 Signals/Maintanence of Way
158.7750 Div B1 BMT Train-to-Dispatcher Simplex
158.8050 Div B1 BMT Train-to-Dispatcher Simplex
158.8800 Div A IRT Train-to-Dispatcher Simplex
160.3950 Coney Island Yard Tower A
160.4850 Staten Island RT Maintenance
160.8450 S. Brooklyn Railroad
160.8450 Yard IND BMT IRT
160.8750 Coney Island Yard BMT IND
160.8950 Coney Island Yard Tower B
161.0250 Coney Island Yard
161.1900 Div A IRT Subway Operations
161.5050 Div B1 BMT Subway Operations
161.5650 S. Brooklyn Railroad
161.5650 Div B2 IND Subway Operations
470.3875 Community Repeater -- Emergencies, Maintenance, Power
470.4375 Staten Island RT Command
470.4875 Maintanence of Way
Table 2

The transit police (NYPD Transit division) frequencies are (all use PL 103.5):

160.905 Manhattan
160.500 Bronx
160.305 Brooklyn
160.965 Queens
160.690 5RMPs (transit police cars)
Table 3

Prior to "unification" in June of 1940, the BMT tracks were operated by the Brooklyn-Manhattan Transportation Company, now designated as division B1. The B2 division is trackage that was owned by the city-run Independant subway. Division A is the former territory of the Interborough Rapid Transit Company (IRT). Incidentally, the reason for the "A" and the "B*" designations is that trains from division B are wider (by about a foot and a half) than on A, thus are completely seperate operationally. However, IND and BMT specs are identical, and in fact there have been many connections built between tracks formerly owned by the IND and the BMT (i.e. Chrystie Street ("B" and "D" trains, plus an unused connection to the Williamsburg Bridge (Former "K" train), 63rd Street (future use only), Queens Plaza ("R" train), Church Ave/Ditmas Ave (Culver line/"F" train) and Prospect park (Brighton line/Q train). At these locations, when a train goes from one territory into another, there is a sign indicating to the train operator to switch radio channels as required.

6063. Pro-2004 problem

Newsgroup: rec.radio.scanner
Date: 1999-12-14 00:00:00 UTC
From: Rob & Jan <rsmith@mars.ark.com>
Message-ID: <3856FDCF.7B9E8D2F@mars.ark.com>
Source record: 99727

Wondering if anyone could help out with advice on the following:

I use two 2004s with an antenna splitter (right now) but have noticed that one of the scanners has a sensitivty problem where I could be listening to the same frequency but only hear the broadcast on one scanner. This happens also with no antenna splitter so I know it isn't from poor antenna connections. For example while scanning VHF lowband skip on one scanner picks up tons of stations. On the other even at the same time dosen't receive any. But does receives local stations. Also on this particular scanner there is a random wideband type signal that makes the audio sound kind of muffled or masked which can corrected with a smack on the top or side of the scanner. This has been happening for a while but have just recently been online and found this newsgroup. My question is has anyone else had this problem with the 2004 and is there any way to fix up the sensitivity. Besides the fading display that is the only thing wrong with it. I have read on here that the 2004 has poor solder connections, could this be a result of that? any advice would be much appreciated.

Rob

To the group:

Ok I give up! I have searched the net for an entire week. Does anyone have a DOS, Win95 FREEWARE program that will download frequencys into this scanner. Yes, I know about Radio Manager, Win Scan ect.... I do not need all of those feature and think that they are over priced. Yes I know how hard it is to write good software but why buy an F-16 when all you need is a paper airplane. If anyone could help me find a simple program I will be shure to tell Santa how good you where this year.

Thanks Brad WB7TSO lowrider@gorge.net

> the pooch in Seattle.

All the hippy-dippy feel-good lefties are just beginning to understand
that they have spent DECADES pledging their allegience to a party that
has only ONE goal in mind...the accumulation of as much power as possible
to boss around as many people as possible.

The Republican leadership is inept.
The Democrat leadership has been truly evil since the very first day
[The party WAS founded for the express purpose of saving slavery].

> :
> : Police officer blames city's poor planning
> :
> : Saturday, December 4, 1999
> :
> : By BRETT SMITH
> :
> :
> :
> : Editor's note: Brett Smith is a 10-year veteran of the Seattle Police
> : Department, stationed in the West Precinct. This week, the former
> University
> : of Washington football player stood on the volatile front lines of the
> World
> : Trade Organization protests -- downtown and on Capitol Hill.
> :
> :
> : Brett Smith Robin Layton/P-I
> : Taunted and spit on by demonstrators, Smith's squad was one of the first
> to
> : use tear gas and make arrests. Upset over Mayor Paul Schell's apologies
> over
> : police actions, he felt compelled to speak out.
> :
> : This is his account, which he provided to P-I reporter Dan Raley:
> :
> : This started at roll call in September when the mayor came to talk to us,

> to
> : let us ask questions about WTO.
> :
> : Officers told him we don't have the right equipment. We were worried we
> : weren't going to get the hockey gear, the shin guards, that we needed or
> : that only certain people were going to get it. The mayor got defensive. He
> : started berating officers. He said, "If you can't do the job, we'll get
> : somebody who can." To me, that was so unbelievable.
> :
> : In October, we had our mandatory nine-hour riot training and Assistant
> Chief
> : (Ed) Joiner was there. We had a question-and-answer session. Someone said,
> : "Don't we expect violent protests?" He said, "No, there's nothing to worry
> : about. It won't be violent."
> :
> : Questions were asked in so many ways about how we were prepared. In
> reading
> : the papers, the protesters had said they were going to disrupt the
> meetings
> : and we had better be prepared. There was no doubt in my mind, we weren't
> : prepared. We heard that officials from Geneva, where the WTO had been held
> : before, had offered to tell us what happened and how they dealt with it
> and
> : the department said, "We don't need your assistance, we've got it
> covered."
> :
> : We had some follow-up meetings and an officer whose brother works for King
> : County said there was FBI and Secret Service in their riot training
> sessions
> : and they were told to fully anticipate that five to six officers would be
> : lost during the protests, either seriously injured or killed.
> :
> : We asked about this and were told by our commander not to spread rumors.
> We
> : knew it was true, that the King County officers had been told that, yet we
> : were sitting and hearing nothing was going to happen. We felt like the
> : department wasn't sharing everything with us.
> :
> : I was in the trenches for two days and I was in the middle of it. Whenever
> : we used tear gas or bullets with pepper gas, we warned people. We gave
> them
> : five minutes to leave. When the first gas was deployed, we already were
> : getting bottles thrown at us. That's what's bothering me: Now we're being
> : the ones accused of causing this, and we were told in our meetings, "Don't
> : be the spark."
> :
> : Nothing but professionalism was displayed by our officers. There was
> : incredible patience as we took taunts and had things thrown at us. There
> was
> : a bottle that was thrown at me and missed, cutting another officer. There

> : was a guy spitting at me and I couldn't do anything. I couldn't be the
> : spark. I took it.
> :
> : To hear how the officers were out of hand is hard to take. We were ordered
> : to hold our ground. It was embarrassing for me as a police officer to see
> a
> : foreign delegate, 3 feet away from me, getting grabbed by protesters and
> : pleading with me to do something, and I had to hold my ground.
> :
> : There were no contingency plans for breaks or food, and that was
> : demoralizing. We were told we would get one meal for every 12 hours we
> were
> : out there, but we weren't fed, not until the state of emergency was
> called.
> :
> : The people at the Sheraton were great; they brought sandwiches down to the
> : line and fed us. In roll call, we were told there would be accommodations.
> : What we got were a couple of chairs in the parking lot of the convention
> : center, and a cold parking garage, with no heaters and no carpet. Or we
> got
> : five minutes on a knee. Right away, they're treating us like second-class
> : citizens. There was no plan to clean our uniforms if they had tear gas on
> : them. So the next day, we went out there with tear gas on our uniforms. We
> : weren't prepared.
> :
> : Before the WTO conference, all we were saying was, "We needed to be
> : prepared." But it seemed like they closed their eyes and said, "I hope
> : nothing happens, I hope nothing happens."
> :
> : I feel the field commander, Capt. (Jim) Pugel, did an excellent job. He
> was
> : a great leader. We had confidence in him. Our lieutenant, Mike Sanford,
> also
> : did an excellent job. But they didn't seem to have support. There was no
> : command center to tell where all the troops were. Our leaders in the field
> : did the best job they could.
> :
> : We're so upset our squad of 10 or 11 wants to do our own protest march
> when
> : this is all over. After being on the front line, I just want to say, "You
> : know, mayor, if you feel you can't do the job, maybe you should find
> : somebody who can."
> :

It's not being blocked by the government. You'll have to get hold of
a Wide Range Receiver/Scanner like the ones manufactured by Alinco,
AOR, ICOM, Sony, Yaesu or Yupiteru. Have a look at Rick Wells site
at the following URL for information about these Receivers/Scanners:

http://www.strongsignals.net/htm/manufact.htm

An alternative would be to find a Mod for the Scanner that you have.

Have a look at the following URL for a possible Scanner Mod:

http://w5gb.nmsu.edu/kc5kto/#mods

I'm pretty sure that all of the new Scanners at Radio Shack cover the
900 Mhz band (or at least part of it). Most of them have coverage up
to 956 Mhz. Have a look at Rick Wells site if you interested in some
good reviews of several brand named scanners:

http://www.strongsignals.net/htm/manufact.htm

>Hello can someone please post the celluar phone frequencies?

Cellular Phone Band A (Channel 1 is Data)

Cell # 1

Channel 1 (333) Tx 879.990 Rx 834.990
Channel 2 (312) Tx 879.360 Rx 834.360
Channel 3 (291) Tx 878.730 Rx 833.730
Channel 4 (270) Tx 878.100 Rx 833.100
Channel 5 (249) Tx 877.470 Rx 832.470
Channel 6 (228) Tx 876.840 Rx 831.840
Channel 7 (207) Tx 876.210 Rx 831.210
Channel 8 (186) Tx 875.580 Rx 830.580
Channel 9 (165) Tx 874.950 Rx 829.950
Channel 10 (144) Tx 874.320 Rx 829.320
Channel 11 (123) Tx 873.690 Rx 828.690
Channel 12 (102) Tx 873.060 Rx 828.060
Channel 13 (81) Tx 872.430 Rx 827.430
Channel 14 (60) Tx 871.800 Rx 826.800
Channel 15 (39) Tx 871.170 Rx 826.170
Channel 16 (18) Tx 870.540 Rx 825.540

Cell # 2

Channel 1 (332) Tx 879.960 Rx 834.960
Channel 2 (311) Tx 879.330 Rx 834.330
Channel 3 (290) Tx 878.700 Rx 833.700
Channel 4 (269) Tx 878.070 Rx 833.070
Channel 5 (248) Tx 877.440 Rx 832.440
Channel 6 (227) Tx 876.810 Rx 831.810
Channel 7 (206) Tx 876.180 Rx 831.180
Channel 8 (185) Tx 875.550 Rx 830.550
Channel 9 (164) Tx 874.920 Rx 829.920
Channel 10 (143) Tx 874.290 Rx 829.290
Channel 11 (122) Tx 873.660 Rx 828.660
Channel 12 (101) Tx 873.030 Rx 828.030
Channel 13 (80) Tx 872.400 Rx 827.400
Channel 14 (59) Tx 871.770 Rx 826.770
Channel 15 (38) Tx 871.140 Rx 826.140
Channel 16 (17) Tx 870.510 Rx 825.510

Cell # 3

Channel 1 (331) Tx 879.930 Rx 834.930
Channel 2 (310) Tx 879.300 Rx 834.300
Channel 3 (289) Tx 878.670 Rx 833.670

Perhaps I missed something in my last time-travel trip from the 1940's,
but the last time I checked, Spread-Spectrum was a transmission that was
simultaneously occupying a very wide stretch of frequency, not a
transmission that keeps moving from one very discrete frequency to another
very quickly. Does anyone have specialized knowledge to address this?

To the last post who said " stop being a jew" get ready for a bunch of hate mail and flames, you were dumb to make that statement on the internet.

I have no problem with UPS , never lost anything. DHL did however and practically called me a liar when I told them they never rang my bell or knocked , screw them.

Newbie, (to the NG), de-lurking for the first time. I wanted to thank everyone for the tips and sources. I wound up buying the BC245XLT from Lee Electronics. Went to rat shacks website. Tried to buy one there.

Their website would not take a credit card with a year 2000 expiration date. (Must have been fate)

Settled on the 245 after following the debates over the 245 vs. Pro 94 & 92.

(Upgraded to the NiMH battery)

Only one small negative comment about the 245.
With it having a rechargeable battery pack, and not accepting alkalines, it would have been nice to have included a visual battery meter on the LCD display.

Thanks again to everyone for the tips, tricks, info, and sites.

I was thinking of buying na unblocked AR16 from Canada. It was said to have a descrambler on it but I heard that they do not work. I was also concerned about programing. I am really looking for a scanner that can pickup cell and portable phones and has a scrambler. If anyone can help me on the AR16 or if you have a better suggestion that would be affordable, I would greatly appreciate it.

I am an enthusiastic new comer to the hobby of scanners. I am about to purchase a new scanner that would enable me to monitor maritime frequencies, like ship to shore calls, ship to ship calls etc.
I need ya'll's input. Any help appreciated. I need to get some advice before xmas, so I can have a handheld scanner in my hands.

Thanks.

Indamericanmd

Hi Gang - Please accept this reminder of the following item which
appears in the rec.radio.swap FAQ/charter:

"PLEASE DO NOT POST DISCUSSION ARTICLES TO THIS GROUP. If you really must
post, please do so to the appropriate discussion group. Use email whenever
possible, especially if you feel someone has committed a breach of
etiquette."

(The full FAQ is posted on the 15th of each month.)

For a smoother-running newsgroup, please abide by the charter.

Note that non-sales questions regarding the operation of particular
equipment should be posted to rec.radio.amateur.equipment (which is
not a sales group).

The first 7 FRS channels are shared with GMRS. All the GMRS specific radios (hand held) I know of have these channels.

Mike

You could try putting three forward biased diodes in series with the 12 volt
battery.

Charley,

At least Netscape will allow you to easily stop the download... I simply clicked on the next message to stop the transfer. You might want to UPGRADE. ;-) ...but you're correct of course, a link would have been better.

Robert

Charley Harp wrote:

> Kurt,

Specialized knowledge? No but I'm a wiz at using search engines. ;-)

This was clipped from the following link:

http://www.conversant.com/faqs.htm

Spread spectrum uses de-restricted radio frequencies and comes in two
forms,direct sequencing and frequency hopping:-

Direct sequencing involves the use of a dedicated frequency for direct
transmission.

Frequency hopping transmissions seek open frequencies and hop from
frequency to frequency at split second intervals, frequency hopping spread
spectrum is more secure than direct sequencing.

So can it be listened to with a conventional scanner? No. So is
it completely secure? Definetly not. How secure is another SS phone
to hacking? I have no desire to perfrom the hack but if I did, I
wouldn't start with a scanner.

Good comments --
I like my 245 and was curious about the PRO series. Seems that there are several comparisons like yours.

I'll keep the 245 -- it serves well.

cheers

Look in the ARRL handbook. Discones have a fixed ratio of elements, angle, and frequency range for any band.

have fun -- it will be a good project.

P.S.
Discones won't cover that range -- they are good for an octave only. The commercial ones extend the freq range (lower) by adding a loaded whip on top -- so you have two antennas on one feed -- a vertical and a discone. you can cover 120 M to 1,200 M on a discone, and use the vertical for below 120.

For Sale: Bianchi Leather Swivel Radio Case - NEW!!!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=220108952

Only 2 months old!
Leather w/swivel attachment
Designed to fit any medium to large radio. Was used previously with a Motorola Saber but can be used by any Vertex, Maxon, GE, etc. portable radio, and it has a stretching strap to accomodate just about any radio
No scratches or other cosmetic defects

This unit is in excellent shape (10 out of 10 cosmetically). I bought it only 2 months ago and have only used it once! Selling because I no longer need it (have a different radio now). Please email with any questions. Good luck, and thanks for looking!

6113. Re: Thoughts on Lakeview Antenna Company (Hamstick)

Newsgroup: rec.radio.scanner
Date: 1999-12-14 00:00:00 UTC
From: griffithj@my-deja.com
Message-ID: <835rp9$9r3$1@nnrp1.deja.com>
Source record: 99839
Cross-posted to: rec.radio.cb,rec.radio.scanner

I have used the Hamsticks and ordered them from lake view each time. Yes I did back into something and snap my 40 meter hamstick off right at the base. I got to see how they were made in doing so. Then the price for the hamstick went up to $24 or something like that, an I felt the price a little high. So I had already invented a new mount for my truck, only works for someone with a real bumper, I designed a new mast, made my own single band Hi-Q coil for 40 meters and 20 meters.
The difference between my homebrew Hi-Q (mush less bandwidth) system and the hamstick, is I built the antenna for about the same price, and the receiver came alive. With the hamstick I never had QRM problems mobile, with the Hi-Q system I have to use filtering because the antenna now has real ears not just, for lack of better words, and in Don Johnson's words, "A dummy load on a stick". The hamstick works, and I was impressed with how well it worked for 19.95. But after building my own Hi-Q system, the hamstick is a " dummy load on a stick" for $24.95 plus shipping. If you don't have a real bumper, then the hamstick type antenna is still your only option for low profile mobile work. My antenna is only a foot longer then the hamstick and requires support at the tailgate edge, but the performance was worth it. I run 50 watts PEP from a TT Scout. For me I always want to own a real bumper.
These are my personal building experiences and comparisons.

Can anyone tell me where to purchase a data decoder? Seems to be a touchy subject these days. Would like to hear from someone that has used one with a scanner. Is it even worth bothering with? Am interested in MDT type transmissions. Please e-mail me. Thanks!

JFaurot@Primenet.com

6122. For Sale or Trade

Newsgroup: rec.radio.scanner
Date: 1999-12-15 00:00:00 UTC
From: Izod <izod@netrover.com>
Message-ID: <mwZ54.21260$cz3.469400@nnrp1.uunet.ca>

I have the following Radios for Sale or Trade.

Pro 64 unmodded (9 out 10), leather case, original antenna and telescoping 25 to 1300mz antenna (RS model 20-006A), Nicad with charging stand (RS 23-288), 2 battery packs, computer interface cable w/software. All in original box w/manual.

Pro 60 (9 out of 10) w/original antenna. No Box or manual. AC Adapter fits both Radios.

Pro 2037 (9 out of 10) no antenna (hooked to outside discone), manual no box.

Will not sell radios separately. Whole package goes.

Make Offer but prefer trade for PCR-1000 or ....?

-IZOD-

I have a pro 2035 scanner for sale. It is in great condition, it is a
1,000 ch scanner 25 - 12 or 1300 mhz with olny a few small breaks, it
receives cell images. Also has a bound manual with it.
serious inquiries only please.
If you are scared of sending money , I can ship insured COD if you like.

I need to sell this to get money for christmas. It will also make a
great gift for the scanner buff in your life.

I am asking $225 firm please , + shipping.

Please post responses by private email.

Thanks

6126. SIS-bulletin Update 023 available

Newsgroup: rec.radio.scanner
Date: 1999-12-15 00:00:00 UTC

Hi All,

Parts of the Scramble Intelligence Service (SIS) Bulletin at the
Scramble Website have been updated with more expected movements,
deployments, exercises and other events from all around Europe.
Available are:

SIS-bulletin NL BeNeLux & Germany SIS-NL 017 (updated)
SIS-bulletin CE Continental Europe SIS-CE 014
SIS-bulletin UK United Kingdom & Ireland SIS-UK 017

Since December all three SIS-bulletins have an individual direct
link which allows you to surf straight to your favorite bulletin.

SIS-bulletin NL http://www.scramble.nl/sis-nl.htm
SIS-bulletin CE http://www.scramble.nl/sis-ce.htm
SIS-bulletin UK http://www.scramble.nl/sis-uk.htm

For a complete preview on all military aviation events and more,
check out Scramble Magazine or surf to the Scramble Website at:

http://www.scramble.nl/sisbulletin.htm

Happy spotting,

Iwan Bogels

SIS-coordinator
Scramble Magazine

Depends on your needs-it has no VHF-low band, which may, or may not be
important in your area.
It does have 800, but no trunking, which again, may, or may not be a
problem.
One POSSIBLE plus, if you want CMT coverage(base side only):most PRO-23's
have a keypad trick available.
The '23 is a double conversion unit, so images may be a problem in some
locations.

Hi there,

Can anyone help me?
What happens after the Space Shuttle is launched, the ships and groundcrews have
gone back to the harbor or whereever they go and all side-activities have stopped.
On what frequency should one listen to hear something from the crew or mission?

I presume that those frequencies are the same for someone listening in Europe,
Australia or in the United States???

6142. Why does my Relm MS-200 keep going to the weather? Can you help me?

Newsgroup: rec.radio.scanner
Date: 1999-12-15 00:00:00 UTC
From: photographer@NOSPAM.cheerful.com
Message-ID: <385727af.386103@news.mindspring.com>
Source record: 99758
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I purchased two Relm MS-200s in October and installed them into my auto. They work great.

BUT, one of them will unexpectedly beep and goto, and display the weather. And the key board is locked. Later it will beep and I can hit the SCAN key.

I don't see this problem happening at the same time. It can happen when I get in the car early in the morning. It can happen anytime in the day while it is working just fine.

Have I hit some keys I shouldn't have? Or is it a bad radio?

Thank you for your help. Happy Holidays to you all.

Tim

>> : be the spark."
>> :
>> : Nothing but professionalism was displayed by our officers. There was
>> : incredible patience as we took taunts and had things thrown at us. There
>> was
>> : a bottle that was thrown at me and missed, cutting another officer. There
>> : was a guy spitting at me and I couldn't do anything. I couldn't be the
>> : spark. I took it.
>> :
>> : To hear how the officers were out of hand is hard to take. We were ordered
>> : to hold our ground. It was embarrassing for me as a police officer to see
>> a
>> : foreign delegate, 3 feet away from me, getting grabbed by protesters and
>> : pleading with me to do something, and I had to hold my ground.
>> :
>> : There were no contingency plans for breaks or food, and that was
>> : demoralizing. We were told we would get one meal for every 12 hours we
>> were
>> : out there, but we weren't fed, not until the state of emergency was
>> called.
>> :
>> : The people at the Sheraton were great; they brought sandwiches down to the
>> : line and fed us. In roll call, we were told there would be accommodations.
>> : What we got were a couple of chairs in the parking lot of the convention
>> : center, and a cold parking garage, with no heaters and no carpet. Or we
>> got
>> : five minutes on a knee. Right away, they're treating us like second-class
>> : citizens. There was no plan to clean our uniforms if they had tear gas on
>> : them. So the next day, we went out there with tear gas on our uniforms. We
>> : weren't prepared.
>> :
>> : Before the WTO conference, all we were saying was, "We needed to be
>> : prepared." But it seemed like they closed their eyes and said, "I hope
>> : nothing happens, I hope nothing happens."
>> :
>> : I feel the field commander, Capt. (Jim) Pugel, did an excellent job. He
>> was
>> : a great leader. We had confidence in him. Our lieutenant, Mike Sanford,
>> also
>> : did an excellent job. But they didn't seem to have support. There was no
>> : command center to tell where all the troops were. Our leaders in the field
>> : did the best job they could.
>> :
>> : We're so upset our squad of 10 or 11 wants to do our own protest march
>> when
>> : this is all over. After being on the front line, I just want to say, "You
>> : know, mayor, if you feel you can't do the job, maybe you should find
>> : somebody who can."
>> :
>> :

>> :
>> : -----------
>> :
>> :
>> :
>> : City rejected offers of help even as tear gas filled streets
>> :
>> : Schell's gamble undercuts police; preparation, leadership lambasted
>> :
>> : Saturday, December 4, 1999
>> :
>> : By MIKE BARBER
>> : SEATTLE POST-INTELLIGENCER REPORTER
>> :
>> :
>> :
>> :
>> :
>> : Seattle's mayor and police chief were offered help from Attorney General
>> : Janet Reno and Gov. Gary Locke as tear gas began to fill the city's
>> streets

>> : department was ill-equipped and undermanned to handle protests. But Mayor
>> : Paul Schell and Chief Norm Stamper disregarded those apprehensions.
>> :
>> : For more coverage, see our WTO index.
>> : Also see our WTO photo galleries.
>> :
>> : --
>> --
>> : ----
>> :
>> : "Schell rolled the dice that we could pull this off peacefully and lost,"
>> : said a veteran police official with knowledge of the planning process, who
>> : declined to be named. "He thought it would be a great coup to host such a
>> : large convention without much police presence."
>> :
>> : Many of the officers on the front lines of the chaos on Seattle's streets
>> : this week say they feel betrayed.
>> :
>> : From the start, King County Sheriff Dave Reichert said Schell sent
>> messages
>> : contradictory to the concerns of law enforcement.
>> :
>> : A week before the World Trade Organization conference began, Reichert
>> : recalls, "I told people not to come downtown -- it would be more than
>> : inconvenient. The next day, the mayor says, 'Come down and shop; it will
>> be

>> : just fine.' He didn't have a clue."
>> :
>> : Reichert, who broke ranks with top brass in publicly criticizing Schell,
>> : promised to address deeper concerns about planning -- or lack of it --
>> next
>> : week. "I intend to say a little more about some of the frustrations we
>> : experienced with WTO," said Reichert, who placed 300 of his officers under
>> : Seattle's command.
>> :
>> : King County police then and now had a supporting role with the city, who
>> : held the ultimate command, and Reichert indicated he wasn't pleased with
>> the
>> : leadership of Schell.
>> :
>> : Schell denied that he had turned down offers of help and that he had
>> ignored
>> : early warnings that the city was not prepared.
>> :
>> : The city eventually accepted the offer of aid from Locke. But that didn't
>> : happen until Tuesday afternoon and the 200 unarmed National Guard members
>> : did not show up on the streets of Seattle until Wednesday morning.
>> :
>> : The attorney general's offer of assistance was never accepted, law
>> : enforcement sources said.
>> :
>> : Schell disputed those accounts last night. "I doubt we would have turned
>> : down help from anybody," he said.
>> :
>> : He also defended the city's planning and defended the officers on the
>> : streets.
>> :
>> : "I've been out there talking to them," he said. "They feel abused by the
>> : media, not supported by the mayor or their chief.
>> :
>> : "I expressed my regrets (to) people here in our city who were innocently
>> : involved and suffered from the use of tear gas, pepper spray and other
>> : necessary measures. People may have taken my apology as a statement that
>> : police overreacted and that is not the case. These tactics were
>> unavoidable
>> : and appropriate," he said.
>> :
>> : Schell also said the department was well-prepared and well-equipped from
>> the
>> : outset.
>> :
>> : "We've given them 'robo-cop' material. We've spent considerable time
>> : training them to expect violence," the mayor said.
>> :
>> : "Everybody, including the King County sheriff, was involved in the
>> planning

>> : with the FBI, Secret Service and state police. There was extensive
>> planning
>> : for all contingencies and possibilities."
>> :
>> : But for many law enforcement sources and officers who worked the front
>> : lines, plans seemed in disarray from the very beginning Tuesday.
>> :
>> : What was perceived as a hands-off police approach as protesters began
>> : gathering around the Washington State Convention and Trade Center Tuesday
>> : morning was actually an unprepared department watching Schell's gamble
>> fail,
>> : law enforcement sources said.
>> :
>> : Police were unable to form safe-passage corridors for dignitaries or even
>> to
>> : physically protect them from heckling crowds. It frustrated and alarmed
>> the
>> : Secret Service and other agents protecting the foreign ministers,
>> : ambassadors and other diplomats among the WTO representatives here.
>> :
>> : The level of preparedness was so flawed that when police decided to use
>> : pepper gas and rubber bullets to compensate for their small undermanned
>> : numbers, they had to beg and borrow.
>> :
>> : Law enforcement sources said a policy decision had been made to
>> dramatically
>> : cut the supplies of pepper gas recommended by a consultant advising the
>> : department how to prepare for the WTO conference.
>> :
>> : Some sources said the consultant's recommendation for $100,000 of pepper
>> gas
>> : was cut to $20,000.
>> :
>> : Police officers who were on the front lines of the melee ran out of
>> : department-issued pepper spray and tear gas midafternoon Tuesday.
>> :
>> : A handful of officers took matters into their own hands, getting
>> permission
>> : to empty the munitions stores of police departments in Auburn, Renton and
>> : Tukwila, the King County Jail and the Department of Corrections. In
>> : addition, some drove around in a sport-utility vehicle to buy chemical
>> : agents from a local law enforcement supply business.
>> :
>> : Meanwhile, a police captain flew to Casper, Wyo., to pick up a stock of
>> gas
>> : from federal agents.
>> :
>> : Once officers had collected several hundred canisters of pepper spray and
>> : tear gas, they drove the supplies as close to downtown as they could get.
>> :

>> : Plainclothes officers then loaded the non-lethal munitions into gym bags
>> and
>> : knapsacks and ran through the crowds to deliver them to waiting uniformed
>> : officers barricading protesters outside the Sheraton Seattle Hotel &
>> Towers
>> : at Sixth Avenue and Pike Street.
>> :
>> : "Those protesters could have stormed any location while we were out of
>> : supplies," one officer, who declined to be named, said in disgust
>> yesterday.
>> :
>> : "We just didn't have the resources we needed when the time came," another
>> : officer said.
>> :
>> : Lisa Ross, a spokesman for the Police Department, acknowledged that "we
>> were
>> : running out of OC."
>> :
>> : Stamper declined to be interviewed about criticisms of his role in the
>> : events.
>> :
>> : Ross said the chief expected detractors, but that he has supported his
>> : officer's efforts all along.
>> :
>> : Several police officials and rank-and-file officers say Schell ignored
>> their
>> : requests for more equipment as far back as September. When officers voiced
>> : concern, Schell berated them, telling them to look elsewhere for
>> employment
>> : if they couldn't do it "his way," said several sources who were there.
>> : "Months ago they said they were going to shut down the city, not just the
>> : WTO, but the city," said an angry Seattle police officer who declined to
>> be
>> : named. "Lots of warnings were there."
>> :
>> : But by the time police finally could act with all their officer-safety
>> : precautions in place, it was too late. Outnumbered officers said they were
>> : faced with an uphill, confrontational battle later in the day, when parts
>> of
>> : the demonstration lost its focus on WTO and turned to vandalism and
>> : confrontations downtown. In violation of police procedures, few slept or
>> : ate.
>> :
>> : "I was so tired I was nauseous," said a Seattle officer who spent nearly
>> 20
>> : hours on the streets.
>> :
>> : Those working close to them, who were also suddenly pressed into service,
>> : saw the strain on the faces of officers pushed to incredible limits and
>> felt

>> : it themselves. Joan, a 55-year-old Metro bus driver, who declined to give
>> : her last name because she had been threatened by anarchists, saw her bus
>> : suddenly pressed into service as a 40-foot patrol car.
>> :
>> : All day Wednesday, she ferried 30 tired King County sheriff's tactical
>> team
>> : members, 26 men and four women, from one trouble spot to another.
>> :
>> : "I wasn't prepared for it, but I wound up feeling like their den mother,"
>> : she said. "You could hear the exhaustion in their voices. They had been up
>> : for 36 out of 48 hours. They had eaten once Tuesday and nothing at all
>> : Wednesday."
>> :
>> : Police sources said keeping officers on the lines for so long put everyone
>> : at risk, because tired officers are either more prone to being harmed or
>> : losing patience with protesters.
>> :
>> : --------------
>> :
>> :
>> :
>> : Schell and Stamper can expect to be severely criticized
>> :
>> :
>> : Saturday, December 4, 1999
>> :
>> : By HEATH FOSTER and KERY MURAKAMI
>> : SEATTLE POST-INTELLIGENCER REPORTERS
>> :
>> :
>> :
>> :
>> :
>> : It's unlikely the wishes of protesters who waved "RECALL SCHELL" signs at
>> : yesterday's peaceful labor march will come true.
>> :
>> : But the beleaguered and disillusioned Seattle mayor is headed for tense
>> : times in the months to come.
>> :
>> : The World Trade Organization conference and resulting "Battle in Seattle"
>> : has seriously shaken confidence in Schell and his strategist, Police Chief
>> : Norm Stamper.
>> :
>> : For more coverage, see our WTO index.
>> : Also see our WTO photo galleries.
>> :
>> : --
>> --
>> : ----
>> :

>> : Ask the citizens who watched the havoc from their living rooms. Poll
>> : downtown business owners who lost as much as $22 million in sales. Or talk
>> : to the labor and environmental groups whose protest messages were drowned
>> : out by concussion bombs. The universal response: this week was an
>> : unmitigated disaster.
>> :
>> : Schell last night stood by the decisions he's made, but said he knows he's
>> : likely to see missteps more clearly once he gets some perspective on the
>> : week's events.
>> :
>> : "I'm sick about it," he said in an obviously pained voice. "But I'm doing
>> : the absolutely best I can."
>> :
>> : But Schell's repeated apologies this week to business owners, WTO
>> delegates
>> : and innocent bystanders won't likely dampen the criticism.
>> :
>> : The City Council has already scheduled the first hearing to investigate
>> the
>> : way Schell and Stamper planned for the protests and how police conducted
>> : themselves during the week. Public comments will be taken at 4 p.m.
>> : Wednesday at City Hall.
>> :
>> : Schell is likely to come under intense pressure to fire Stamper, who many
>> : blame for underestimating the risk of violence, which may have fueled
>> chaos
>> : on the streets.
>> :
>> : Former Mayor Wes Uhlman, who weathered Vietnam War demonstrations during
>> his
>> : eight years in office, said Schell was right to rely on Stamper for
>> tactical
>> : planning, but that Stamper made huge errors in judgment and Schell has no
>> : choice.
>> :
>> : "The police officials have admitted publicly that they screwed up," Uhlman
>> : said. "If this happened in a company, they would get rid of the CEO. In th
>> is
>> : case that's Stamper."
>> :
>> : But if Schell manages the crisis well, restoring order downtown and
>> building
>> : faith in the Police Department, he's likely to weather the crisis.
>> :
>> : And as for the Emerald City, political scientists agree the city's
>> : reputation as one of the nation's most livable metropolises can withstand
>> : the beating. They say the Battle in Seattle will, like the General Strike
>> of
>> : 1919, become an important and even proud part of Seattle history,
>> especially

>> : because more than 50,000 people poured into Seattle's streets and not one
>> : was killed or seriously injured.
>> :
>> : "Seattle is one of the great American cities, and the events of the last
>> : week have not in any way diminished that," said Rep. Dennis Kucinich,
>> : D-Ohio. The former Cleveland mayor watched police manhandle Seattle City
>> : Councilman Richard McIver as he was trying to attend a WTO function (see
>> : related story).
>> :
>> : "You had 100,000 people come to Seattle and a few of them were violent,"
>> : Kucinich said. "Seattle came out as the city that was at the forefront of
>> a
>> : new social movement concerned with lifting the economic condition of
>> people
>> : around the world."
>> :
>> : Kucinich points out that the despite the violent riots that rocked Chicago
>> : during the Democratic Convention in 1968, the world still considers it a
>> : great city. Chicago voters overwhelmingly re-elected Mayor Richard Daley.
>> :
>> : "Seattle should stop beating up on itself," he said.
>> :
>> : Added Bob Watt, director of the Greater Seattle Chamber of Commerce: "A
>> lot
>> : of the 2,700 members of the Greater Chamber are feeling shock, anger,
>> fear,
>> : economic worry. But they're also feeling grateful . . . that with the
>> level
>> : of violence, no one got killed."
>> :
>> : Seattle figured it was ready for the WTO conference -- until the second
>> day
>> : of meetings. Early in the day, demonstrators were happy, even celebrating.
>> : But they far outnumbered police, and they blocked the Washington Trade and
>> : Convention Center in an effort to shut down the WTO.
>> :
>> : Delegates couldn't get into the Paramount, and opening ceremonies were
>> : canceled.
>> :
>> : Authorities decided they were too short-handed to protect the street and
>> : also arrest hundreds of protesters. When protesters refused to disperse,
>> : police moved in. With the nation watching, police fired tear gas and
>> rubber
>> : pellets.
>> :
>> : A roving band of self-styled anarchists rampaged through downtown,
>> smashing
>> : windows.
>> :
>> : Late Tuesday, police cracked down, using tear gas, concussion grenades and

>> : rubber pellets in a series of ugly confrontations. Schell declared a civil
>> : emergency and ordered the first curfew since World War II. He asked for
>> : additional state and federal help, and on Wednesday morning about 200
>> : National Guard troops and 300 additional Washington State Patrol troopers
>> : arrived in Seattle.
>> :
>> : On Wednesday, President Clinton came to a locked-down city with a 46-block
>> : downtown "no protest" zone where police waded into crowds, arresting more
>> : than 500.
>> :
>> : Peaceful protests returned Thursday, and Schell trimmed back the
>> no-protest
>> : zone and ended the curfew.
>> :
>> : The dramatic events have left Schell and Stamper wounded in the eyes of
>> the
>> : public, and a surprising number of people are willing to pummel them.
>> :
>> : "They should resign," said Moti Swissa, the owner of the jewelry store
>> : Swissa Inc. on Fifth Avenue. "They screwed up big time."
>> :
>> : Jim Kneeland, a Democratic political consultant and Schell supporter, said
>> : working at his office near the convention center gave him "new sympathy
>> for
>> : the people in Sarajevo."
>> :
>> : Kneeland said he was frustrated that Schell seems out of touch with those
>> : who paid the most for the WTO chaos -- thousands of low-wage workers in
>> : downtown stores and restaurants who won't get paid for this week.
>> :
>> : Yet, Kneeland predicted Schell will survive if he brings business back
>> : downtown and demonstrates that he's learned from the mistakes of his
>> Police
>> : Department.
>> :
>> : But so far, Schell has shown no willingness to criticize Stamper or his
>> : officers. "Yesterday, I expressed my regrets that people here in our city
>> : were innocently involved and suffered from the use of tear gas, pepper
>> : spray, and other necessary measures," Schell said. "People may have taken
>> my
>> : apology as a statement that police overreacted and that is not the case .
>> .
>> : . Those tactics were unavoidable and appropriate."
>> :
>> : And then there's what's being called "the McIver incident." When McIver
>> : attempted to enter a WTO event Wednesday night, he was told to get out of
>> : his car and was handcuffed by police. Council President Sue Donaldson said
>> : the incident wouldn't have happened had Schell bothered to get WTO
>> : credentials for council members.
>> :

>> : Yesterday, the National Association for the Advancment of Colored People
>> and
>> : Seattle Urban League called for an investigation of the incident,
>> believing
>> : McIver may have targeted because he is black, or because of past criticism
>> : of police treatment of minorities.
>> :
>> :
>> :
>> :
>> :
>> :
The Democratic party is the only party that even makes a decent
attempt at anything democratic in this country. Like the needed
redistribution of wealth and nationalization of all natural resources
instead of allowing the a..holes over at Oil company X to rape the
people in the pocket book. Both partys took a crap on scanning
however!

> >> : with the FBI, Secret Service and state police. There was extensive
> >> planning
> >> : for all contingencies and possibilities."
> >> :
> >> : But for many law enforcement sources and officers who worked the front
> >> : lines, plans seemed in disarray from the very beginning Tuesday.
> >> :
> >> : What was perceived as a hands-off police approach as protesters began
> >> : gathering around the Washington State Convention and Trade Center Tuesday
> >> : morning was actually an unprepared department watching Schell's gamble
> >> fail,
> >> : law enforcement sources said.
> >> :
> >> : Police were unable to form safe-passage corridors for dignitaries or even
> >> to
> >> : physically protect them from heckling crowds. It frustrated and alarmed
> >> the
> >> : Secret Service and other agents protecting the foreign ministers,
> >> : ambassadors and other diplomats among the WTO representatives here.
> >> :
> >> : The level of preparedness was so flawed that when police decided to use
> >> : pepper gas and rubber bullets to compensate for their small undermanned
> >> : numbers, they had to beg and borrow.
> >> :
> >> : Law enforcement sources said a policy decision had been made to
> >> dramatically
> >> : cut the supplies of pepper gas recommended by a consultant advising the
> >> : department how to prepare for the WTO conference.
> >> :
> >> : Some sources said the consultant's recommendation for $100,000 of pepper
> >> gas
> >> : was cut to $20,000.
> >> :
> >> : Police officers who were on the front lines of the melee ran out of
> >> : department-issued pepper spray and tear gas midafternoon Tuesday.
> >> :
> >> : A handful of officers took matters into their own hands, getting
> >> permission
> >> : to empty the munitions stores of police departments in Auburn, Renton and
> >> : Tukwila, the King County Jail and the Department of Corrections. In
> >> : addition, some drove around in a sport-utility vehicle to buy chemical
> >> : agents from a local law enforcement supply business.
> >> :
> >> : Meanwhile, a police captain flew to Casper, Wyo., to pick up a stock of
> >> gas
> >> : from federal agents.
> >> :
> >> : Once officers had collected several hundred canisters of pepper spray and

> >> : tear gas, they drove the supplies as close to downtown as they could get.
> >> :
> >> : Plainclothes officers then loaded the non-lethal munitions into gym bags
> >> and
> >> : knapsacks and ran through the crowds to deliver them to waiting uniformed
> >> : officers barricading protesters outside the Sheraton Seattle Hotel &
> >> Towers
> >> : at Sixth Avenue and Pike Street.
> >> :
> >> : "Those protesters could have stormed any location while we were out of
> >> : supplies," one officer, who declined to be named, said in disgust
> >> yesterday.
> >> :
> >> : "We just didn't have the resources we needed when the time came," another
> >> : officer said.
> >> :
> >> : Lisa Ross, a spokesman for the Police Department, acknowledged that "we
> >> were
> >> : running out of OC."
> >> :
> >> : Stamper declined to be interviewed about criticisms of his role in the
> >> : events.
> >> :
> >> : Ross said the chief expected detractors, but that he has supported his
> >> : officer's efforts all along.
> >> :
> >> : Several police officials and rank-and-file officers say Schell ignored
> >> their
> >> : requests for more equipment as far back as September. When officers voiced
> >> : concern, Schell berated them, telling them to look elsewhere for
> >> employment
> >> : if they couldn't do it "his way," said several sources who were there.
> >> : "Months ago they said they were going to shut down the city, not just the
> >> : WTO, but the city," said an angry Seattle police officer who declined to
> >> be
> >> : named. "Lots of warnings were there."
> >> :
> >> : But by the time police finally could act with all their officer-safety
> >> : precautions in place, it was too late. Outnumbered officers said they were
> >> : faced with an uphill, confrontational battle later in the day, when parts
> >> of
> >> : the demonstration lost its focus on WTO and turned to vandalism and
> >> : confrontations downtown. In violation of police procedures, few slept or
> >> : ate.
> >> :
> >> : "I was so tired I was nauseous," said a Seattle officer who spent nearly
> >> 20
> >> : hours on the streets.
> >> :
> >> : Those working close to them, who were also suddenly pressed into service,

> >> : saw the strain on the faces of officers pushed to incredible limits and
> >> felt
> >> : it themselves. Joan, a 55-year-old Metro bus driver, who declined to give
> >> : her last name because she had been threatened by anarchists, saw her bus
> >> : suddenly pressed into service as a 40-foot patrol car.
> >> :
> >> : All day Wednesday, she ferried 30 tired King County sheriff's tactical
> >> team
> >> : members, 26 men and four women, from one trouble spot to another.
> >> :
> >> : "I wasn't prepared for it, but I wound up feeling like their den mother,"
> >> : she said. "You could hear the exhaustion in their voices. They had been up
> >> : for 36 out of 48 hours. They had eaten once Tuesday and nothing at all
> >> : Wednesday."

> >> :
> >> :
> >> :
> >> :
> >> :
> >> : It's unlikely the wishes of protesters who waved "RECALL SCHELL" signs at
> >> : yesterday's peaceful labor march will come true.
> >> :
> >> : But the beleaguered and disillusioned Seattle mayor is headed for tense
> >> : times in the months to come.
> >> :
> >> : The World Trade Organization conference and resulting "Battle in Seattle"
> >> : has seriously shaken confidence in Schell and his strategist, Police Chief
> >> : Norm Stamper.
> >> :
> >> : For more coverage, see our WTO index.
> >> : Also see our WTO photo galleries.
> >> :
> >> : --
> >> --

> >> : ----
> >> :
> >> : Ask the citizens who watched the havoc from their living rooms. Poll
> >> : downtown business owners who lost as much as $22 million in sales. Or talk
> >> : to the labor and environmental groups whose protest messages were drowned
> >> : out by concussion bombs. The universal response: this week was an
> >> : unmitigated disaster.
> >> :
> >> : Schell last night stood by the decisions he's made, but said he knows he's
> >> : likely to see missteps more clearly once he gets some perspective on the
> >> : week's events.
> >> :
> >> : "I'm sick about it," he said in an obviously pained voice. "But I'm doing
> >> : the absolutely best I can."
> >> :
> >> : But Schell's repeated apologies this week to business owners, WTO
> >> delegates
> >> : and innocent bystanders won't likely dampen the criticism.
> >> :
> >> : The City Council has already scheduled the first hearing to investigate
> >> the
> >> : way Schell and Stamper planned for the protests and how police conducted
> >> : themselves during the week. Public comments will be taken at 4 p.m.
> >> : Wednesday at City Hall.
> >> :
> >> : Schell is likely to come under intense pressure to fire Stamper, who many
> >> : blame for underestimating the risk of violence, which may have fueled
> >> chaos
> >> : on the streets.
> >> :
> >> : Former Mayor Wes Uhlman, who weathered Vietnam War demonstrations during
> >> his
> >> : eight years in office, said Schell was right to rely on Stamper for
> >> tactical
> >> : planning, but that Stamper made huge errors in judgment and Schell has no
> >> : choice.
> >> :
> >> : "The police officials have admitted publicly that they screwed up," Uhlman
> >> : said. "If this happened in a company, they would get rid of the CEO. In th
> >> is
> >> : case that's Stamper."
> >> :
> >> : But if Schell manages the crisis well, restoring order downtown and
> >> building
> >> : faith in the Police Department, he's likely to weather the crisis.
> >> :
> >> : And as for the Emerald City, political scientists agree the city's
> >> : reputation as one of the nation's most livable metropolises can withstand
> >> : the beating. They say the Battle in Seattle will, like the General Strike
> >> of

> >> : 1919, become an important and even proud part of Seattle history,
> >> especially
> >> : because more than 50,000 people poured into Seattle's streets and not one
> >> : was killed or seriously injured.
> >> :
> >> : "Seattle is one of the great American cities, and the events of the last
> >> : week have not in any way diminished that," said Rep. Dennis Kucinich,
> >> : D-Ohio. The former Cleveland mayor watched police manhandle Seattle City
> >> : Councilman Richard McIver as he was trying to attend a WTO function (see
> >> : related story).
> >> :
> >> : "You had 100,000 people come to Seattle and a few of them were violent,"
> >> : Kucinich said. "Seattle came out as the city that was at the forefront of
> >> a
> >> : new social movement concerned with lifting the economic condition of
> >> people
> >> : around the world."
> >> :
> >> : Kucinich points out that the despite the violent riots that rocked Chicago
> >> : during the Democratic Convention in 1968, the world still considers it a
> >> : great city. Chicago voters overwhelmingly re-elected Mayor Richard Daley.
> >> :
> >> : "Seattle should stop beating up on itself," he said.
> >> :
> >> : Added Bob Watt, director of the Greater Seattle Chamber of Commerce: "A
> >> lot
> >> : of the 2,700 members of the Greater Chamber are feeling shock, anger,
> >> fear,
> >> : economic worry. But they're also feeling grateful . . . that with the
> >> level
> >> : of violence, no one got killed."
> >> :
> >> : Seattle figured it was ready for the WTO conference -- until the second
> >> day
> >> : of meetings. Early in the day, demonstrators were happy, even celebrating.
> >> : But they far outnumbered police, and they blocked the Washington Trade and
> >> : Convention Center in an effort to shut down the WTO.
> >> :
> >> : Delegates couldn't get into the Paramount, and opening ceremonies were
> >> : canceled.
> >> :
> >> : Authorities decided they were too short-handed to protect the street and
> >> : also arrest hundreds of protesters. When protesters refused to disperse,
> >> : police moved in. With the nation watching, police fired tear gas and
> >> rubber
> >> : pellets.
> >> :
> >> : A roving band of self-styled anarchists rampaged through downtown,
> >> smashing
> >> : windows.

> >> :
> >> : Late Tuesday, police cracked down, using tear gas, concussion grenades and
> >> : rubber pellets in a series of ugly confrontations. Schell declared a civil
> >> : emergency and ordered the first curfew since World War II. He asked for
> >> : additional state and federal help, and on Wednesday morning about 200
> >> : National Guard troops and 300 additional Washington State Patrol troopers
> >> : arrived in Seattle.
> >> :
> >> : On Wednesday, President Clinton came to a locked-down city with a 46-block
> >> : downtown "no protest" zone where police waded into crowds, arresting more
> >> : than 500.
> >> :

> >> :
> >> :
> >> :
> >> :
> >> :
> The Democratic party is the only party that even makes a decent
> attempt at anything democratic in this country. Like the needed

DEMOCRACY is an abomination. Nothing more than institutionalized
MOB RULE.

democracy is 3 wolves and a sheep voting on what to have for dinner.

> redistribution of wealth and nationalization of all natural resources

REDISTRIBUTION IS THEFT, ASSHOLE!!!!!!!

> instead of allowing the a..holes over at Oil company X to rape the
> people in the pocket book. Both partys took a crap on scanning
> however!

You really are STUPID, aren't you?

LOOK at every country on earth that has "redistributed" the wealth.
It all get's "redistributed" right into the hands of whatever band
of murderers took over the country.

Look at Russia. Moscow has more billionaires than any other city
on the face of the earth, INCLUDING NEW YORK AND L.A.

How did they get all of those riches...through "redistribution" of
the wealth...RIGHT INTO THE HANDS OF THE COMMUNIST PARTY MASTERS.

In fact, the only thing different now from 20 years ago was that
NOW their individual names are on the assets, whereas before, the
assets were merely nominally under the control of individual
chief thieves in the communist party. But, hey, if one or another
sufficiently upsets the ruling oligarchy, that person WILL find
all of his assets seized, and redistributed among the other oligarchs,
that is ... if he lives that long.

DEMOCRACY is an abomination. Nothing more than institutionalized
MOB RULE.

democracy is 3 wolves and a sheep voting on what to have for dinner.

> redistribution of wealth and nationalization of all natural resources

REDISTRIBUTION IS THEFT, ASSHOLE!!!!!!!

> instead of allowing the a..holes over at Oil company X to rape the
> people in the pocket book. Both partys took a crap on scanning
> however!

You really are STUPID, aren't you?

LOOK at every country on earth that has "redistributed" the wealth.
It all get's "redistributed" right into the hands of whatever band
of murderers took over the country.

Look at Russia. Moscow has more billionaires than any other city
on the face of the earth, INCLUDING NEW YORK AND L.A.

How did they get all of those riches...through "redistribution" of
the wealth...RIGHT INTO THE HANDS OF THE COMMUNIST PARTY MASTERS.

In fact, the only thing different now from 20 years ago was that
NOW their individual names are on the assets, whereas before, the
assets were merely nominally under the control of individual
chief thieves in the communist party. But, hey, if one or another
sufficiently upsets the ruling oligarchy, that person WILL find
all of his assets seized, and redistributed among the other oligarchs,
that is ... if he lives that long.

By the way, All of what you are proposing is UNCONSTITUTIONAL.

Therefore, what you are saying is that what you REAAAAALLLLLY ADMIRE
about the Democrats is that they are a bunch of lawless thugs.

Thank you for clarifying that, ASSHOLE.

Hello,

I am looking for pictures of
the Yupteru MVT 3000/4000/5000/
6000 and 7000 scanners.

Pleas send them to
cpootjes@kembit.nl

Thanks !

Sent via Deja.com http://www.deja.com/
Before you buy.

I too want to buy a handheld for very infrequent and casual use
(mainly to use just in emergencies). I'd like to monitor police, fire,
ambulance, FEMA, sheriff, etc.

Do I need the trunked radios (which cost from about $160 and higher),
or will the lower cost scanners do the job?

Thanks.

Bob

Very interesting reading the book "Trial by Fire" by Page Smith
concerning the Civil War. An element of the Democratic party was
actively engaged in treason. So apparently Bubber believes in
carrying on the tradition.

The Seattle debacle was caused by a Liberal mayor who didn't want
to take advice and face reality. He expected fellow Liberals to
be leading the protesters and thought he could "reason" with
them. Chances are he still hasn't learned his lesson though.

Use the appropriate BC895 RS232 commands on the Uniden website in a text file and send the file to the radio using Hyperterminal. It takes about 5 minutes to load my BC245 with 300 channels using Hyperterminal.

Deal fell through so here it is again

I have a completely VIRGIN Uniden Bearcat BC200XLT scanner for sale
this radio HAS NOT BEEN MODIFIED in any way
but CAN be modified to pick up those freqs you are not supposed to
listen too ;)
I have the manual,antenna,ear plug,DC car adapter
Wall wart charger,Three(3) batts,this AWESOME
leather swivel case that looks new and is very well built kinda like a
Motorola portable
case, and a Motorola converted spkrmic/speaker which comes in really
handy
This is one NICE radio but I have no use for it as I am trunked here ;{
It is in really good shape with no severe gouges or scratches and all
printing on the keys is 100%
I would like $150 for the radio
For Pictures or more info
please contact
2nzster@netscape.net

Thanks Tiny

YES!
I was scanning 42.42/42.84 the other day i had 5 different dispatchers on the same frequencies, some with southern accents, some with a central us accent, 1 with a new england accent, and my local dispatch.
I also noticed that the signal was affecting the reception for our local dispatch...he was having trouble hearing his units and the southern accent dispatcher on the frequency was coming in stronger??

Gee... My Sony STR-AV1020 AV receiver died and it cost me a flat rate $100 for the Sony depot to replace a $0.50 transistor. I guess we wouldn't want our local government doing business with big bad Sony either.

If you think the Motorola depot repair rates are too high, Motorola will sell you the manuals, test equipment and parts and you are free to fix them yourself. Additionally, there are many private operations that will do depot level rapair on Motorola equipment. Many large Motorola customers are self maintained.

6175. Icom R2 Prority Channels in Bank scan mode? How

Newsgroup: rec.radio.scanner
Date: 1999-12-15 00:00:00 UTC
From: Soy Bomb II <mm11720@navix.net>
Message-ID: <839g8knla1@iac5.navix.net>
Source record: 99791

I've read the manual and can not seem to get a priority channel in a programmed bank to work while I scan the channel. Basically I can't seem to assign a priority channel to any channel in a scan bank (0-49). Is this even possible or can I only program a priority channel on a random frequency and then have it check it while I do something like and edge scan?

What I want to do is assign a priority channel to one in a bank and then scan all banks but when this channel lights up it jumps to this channel regardless of activity on other programmed channels.

Please if the is possible walk me through the set up to set a channel to priority in a bank then do a programmed channel scan. Thanks.

Dex

From: n7qyk@axtek.com
Message-ID: <839qcd$7g7$1@nnrp1.deja.com>
Source record: 99605

Has anyone out there come up with a modification that would bring the Scan & manual keys of the Bearcat 9000 out of the scanner to a remote location?

I am working with an application that places a BC-9000 between the front seats of a news helicopter and it is not easy for the pilot or the cameraman to get to the front panel to hit manual when something interesting hits. The ideal solution is some sort of large switch that could be routed to a foot switch for the cameraman and maybe something on
the cyclic for the pilot.

I know there was a project that brought the entire front panel off the BC-9000 for an easier to mount unit as well.

Any ideas???

I haven't bought a scanner yet, but want to do so before year's end.
Why does the BC245 have less wide coverage than others? I guess I
naiively thought all scanners would scan almost all frequencies.

Since the BC245 appears to have large gaps in its coverage...can
anyone tell me what is ordinarily in those gaps?

Thanks.

Bob

That's a broad, idiotic statement. The poster said "police," not
"street cop."

Your statement about intel personnel is also broad & I think erroneous
as
relating to this thread.

Intelligence is a force-multiplier, and tactical field intelligence
can & is
performed by all varieties of law enforcement agencies, without having
to rely
on dedicated intercept operators & analysts. For obvious reasons
they're
usually discrete about it, and information is often used 'for
intelligence
value only' (read: not presented in court) despite it being legally
obtained. I
do think though that --in my experiences-- many municipal law
enforcement
agencies don't practice basic intelligence craft as well or as
frequently as
they could, most because of complacency due to the majority of criminals
they
deal with being very stupid.

> > : Understanding the fervor that could be raised if the police start or there

> >
> > They would shit their pants if they knew how many agencies do
> > listen in. Often for practice.

Huh? Your first paragraph seems to express the opinion that it's NOT done... Some PDs have gotten into trouble because moronic officers have bragged around about tuning in cellular, and even used illegal cellular intercepts as sole probable cause to make contact with a suspect.

> > : As for the protest,

That's BS.

> > If the police want to buy it, the Guard can provide personnel
> > to operate it. But they can not execute a wiretap or a warrent.

Training is often provided by the manufacturer/systems integrator, and there are business that specilize in training LE personnel in operating technical surveillance gear. The Guard has to be concerned with Posse Comitatus & other administrative/budgetary concerns with impact their availability too.

6189. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.scanner
Date: 1999-12-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <83a43m$73p$1@news.hawaii.edu>
Source record: 99614
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

You most likely have it set to receive emergency weather transmissions or you have a weather channel marked as a priority channel. Consult your owners manual to correct the problem.

The "NEW" PRO-94 Owners Board,is "Alive" and "Growing"! As of this
"POST" there are 50 Members! There is:
1. A e-mail Digest to "post" to and Ask questions,share thoughts and
ideas.
2. A "Active" Archive of "past post"(must be a member to read).
3. "Link's" to other "Scanner sites" and "Trunking Info".
(17 so far)some "posted" by Members.
4. A "Survey" that will "change" Bi-monthly to Monthly.
5. A "win zipped file" of the PRO-94 Manual(From RS Product Support).
6. A "Great PRO-94 Radio community" to "Get" involved with!

Qualifications: Own a PRO-94(age group)17 and UP.

Come join us at: http://www.onelist.com/community/pro94owners

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS

(Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to

use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association

(RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne National Labs Picnic Pavilion, Cass Avenue, south of I-55 in or around Darien or Lemont. The picnic will start whenever someone arrives. The regular meeting will be in the Pavilion at 1:00 PM. If the weather is totally frightful we also have a room inside the Laboratory building available for us.

The Picnic is BYOE (Bring your own everything) If you want
to eat or drink, bring it with you, as well as your BBQ or
six pack.

Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by Electra Company, a division of Masco Corp of Indiana. In the mid 1980s, Uniden, a Japanese company, bought out the Bearcat scanner line and Uniden's first Bearcat scanner was the BC800XLT model.

Most of the models discussed in this article are base/mobile units made by Electra during the 1970s and 1980s although some of the capacitor failures occur in the Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing date code on the rear of the cabinet. The code is comprised of a single character (C = Cumberland, Indiana, P = Puerto Rico), followed by four digits denoting year and week the radio was built. For example, "P8422" denotes the radio was made in the Puerto Rico factory during the 22nd week of 1984.

One way to roughly estimate a radio's age is to examine the 4 digit date codes often stamped on the integrated circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and

2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://dune.globe-net.net/~rc123/Robert/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the

squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042
Mar 1996 - Tips for Fixing Bearcat Scanners
May 1996 - Compendium of Scanner IFs
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Aug 1996 - BMI Nitelogger II tape recorder activator
Sep 1996 - PRO-2022 modifications
PRO-2042 baseband audio tap
Oct 1996 - Radio Shack PRO-2046 mobile
Nov 1996 - Build a wooden mobile radio mount
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jun 1997 - Innovative Scanner Patents of the 1970s
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Jan 1998 - Test Equipment Bargains
Feb 1998 - Innovative Scanner Patents of the 1980s and Beyond
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Jul 1998 - Stub and Par Electronics intermod rejection filters
Aug 1998 - Sony SC1PC portable
Sep 1998 - Orange Book of Scanner Repair
Tone Out Testing (2-tone generators)
Monitoring ACSB (amplitude compandored side band)

Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500
Apr 1999 - ICOM IC-R2 portable scanner
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter
Jul 1999 - Racing Electronics RE2000 portable
Aug 1999 - AOR AR16 portable
Sep 1999 - Uniden Bearcat BC245XLT portable
Oct 1999 - Plectron R700 series monitor receivers
Nov 1999 - Uniden Bearcat BC278CLT clock radio scanner
Dec 1999 - Uniden Bearcat BC248CLT clock radio scanner
Jan 2000 - Radio Shack PRO-92 portable scanner |
Jan 2000 - Stridsberg Engineering FLT201A FM Notch Filter and |
MCA-204 Receiver Multicoupler |

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back. Multimode frequency coverage 0.1 to 2000 MHz (minus cellular bands). 20 selectable step sizes from 0.05 to 500 kHz. Knob atop the radio clicks when rotated and serves as a VFO knob, channel selector, and menu navigation control. Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels.

We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory

channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative

test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks.

Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics).

The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has

already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high

pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but

very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-

2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The

most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked

out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken

around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet

available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are

provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-

channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are

unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit

diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

What pisses those of us who are scanner hobbyists
is that they banned manufacture of scanners that can
receive Cel-Tels yet they do not enforce the law against
liberals who violate it.

What is with Americans that we will ban technology
instead of holding people accountable to a standard?

Bob

A lower cost scanner will do the job providing the Police, etc,etc are not
on a trunked system. If your not sure about this you can get the Police
Call plus Police call beyond book from Radio Shack. also check out
http://www.policecall.com
the book cost about 15$...and believe me it's worth the money. Good luck

John

Before blaming others of having poor memories, you'd better refresh your own recollections guys.

See the Justice Department press release at

http://www.usdoj.gov/criminal/cybercrime/177crm.htm

which begins:

"WASHINGTON, D.C. -- Charles R. Wilson, United States Attorney for the Middle District of Florida, and Scott Charney, Chief of the Computer Crime and Intellectual Property Section of the Justice Department's Criminal Division, jointly announced that John and Alice Martin of Columbia County, Florida, today pleaded guilty to intentionally intercepting the radio portion of a cellular telephone call, in violation of Title 18, United States Code, Section 2511(1)(a) and 2511(4)(b)(ii). United States District Court Judge Harvey Schlesinger in Jacksonville, Florida accepted their pleas and sentenced them to a fine of $500 each. The statute does not provide for a term of imprisonment, and the maximum fine permitted under the statute is $5,000.

The communication that was illegally intercepted took place on December 21, 1996, and was a conference call among Speaker of the U.S. House of Representatives Newt Gingrich and others.

..."

Please respect the facts,
Charley, N8MQL

This scanner is in very good condition,
Here are the specs;
BC178XLT
-11 Bands with Aircraft
-100 channels
-Twin Turbo Scan and Search Modes
-Weather Scan & Alert
-Manual Channel Access
-Service Search Feature
-Data Skip

FREQUENCY RANGE;
29-54 MHz
108-174 MHz
406-512 MHz

This scanner is in 100% working condition except for the frequency back
light is burned out. I rate it a "9" out of 10.
The price is $65.00 + $7.50 for priority shipping to any address in the
U.S.
Comes with box and manual, antenna, and power pack.

sorry no C.O.D.`s or personal checks,
U.S. Postal money order only.
If interested please contact me by email;
max_it_out@webtv.net
regards
Bob Balent

and Intellectual Property Section of the Justice Department's Criminal
Division, jointly announced that John and Alice Martin of Columbia County,
Florida, today pleaded guilty to intentionally intercepting the radio
portion of a cellular telephone call, in violation of Title 18, United
States Code, Section 2511(1)(a) and 2511(4)(b)(ii). United States District
Court Judge Harvey Schlesinger in Jacksonville, Florida accepted their pleas
and sentenced them to a fine of $500 each. The statute does not provide for
a term of imprisonment, and the maximum fine permitted under the statute is
$5,000.

The communication that was illegally intercepted took place on December
21, 1996, and was a conference call among Speaker of the U.S. House of
Representatives Newt Gingrich and others.

..."
:
:Please respect the facts,
:Charley, N8MQL

And that is a fine? A mere $500? For that I have to
put up with complex receivers that have all sorts of
unnecessary control functions to prevent me from
doing what they did? That adds cost to the radio.

I want these democrats punished. I want them to
pay for creating a bullshit law that is mostly symbolism.

Message-ID: <3788-385983E9-42@storefull-623.iap.bryant.webtv.net>
Source record: 99653

What I have for sale is a real nice base scanner that has 400 channels,
and covers a WIDE range of frequencies.
25 MHz -- 1300 MHz

Its an older unit, but it works very good, it covers all of the 800 MHz
band, and for those interested it does pick up cellular, but this is
ILLEGAL, so you shouldn`t listen to cellular phones, its AGAINST THE LAW
!!!

From what people tell me , this scanner was built back when it was
legal to listen to cell.

It has some normal wear, but not much.
It also has; AM, FM, WFM modes, and the steps are 5 kHz, 12 kHz, 50 kHz.
There`s no box or manual.

The BOTTOM LINE is this scanner covers a lot.
I MUST BE NUTS for selling this one, but Christmas is here and I could
use the extra cash.

The Price is $245.00 + $15.00 for priority shipping (Postal insurance
included) to any address in the U.S.
sorry no C.O.D.`s or personal checks.
I only accept a U.S. Postal money order.
Shipping usually takes 3-4 days after I receive your money order.

If interested please contact me by email;
max_it_out@webtv.net
Hurry while I still got it, because I saw this same scanner sell for a
lot more than I`m asking for.

HAPPY HOLIDAYS
regards,
Bob Balent

> over regular scanners? Can anyone recommend a good trunk scanner?

Yes, you can monitor a trunked system with a conventional scanner, but it's really not much fun. I did this for a while when monitoring our local system, and it inspired me to buy a TrunkTracker the first chance I got. :-)

With a conventional scanner you have to lock out the control channel whenever they change it (and unlock the previously used frequency). You then have to scan through the entire range of the trunked system's frequencies until you hear something interesting. Then when the radio system switches frequencies halfway through the conversation you have to scan over and over to work your way through the other extranous traffic on the system and pray that you can find and recognize the same channel before you miss too much. Rinse, lather, repeat. It can be done, but unless you can't afford trunking scanner I can see no reason to reccomend it.

Buy a Uniden BC245XLT and you won't be sorry. The Pro-92 appears to be a pretty nice conventional scanner, but pretty much a washout when it comes to trunking performance. The Pro-94 is a better performer, but in many ways a watered-down version of the BC245 that lacks many features you'll probably wish you had in a few weeks--and it really doesn't cost much less than the BC245.

-Bryan

6231. Winradio trunk tracking question

> listening to the events here in Seattle I can hear officers asking each
> other "does anyone have me on camera?...reply: yes, alot of them..."

The best reasons, technical limitations and mutual aid, have already been mentioned by other folks here. The police and fire departments have to coordinate all the time, which would mean that both would either need encryption or that they'd have to constantly switch in and out, which seems like it would be a potentially dangerous nuisance.But another reason that comes to mind is the ability of other off-duty officers to listen in on the communications so that they can assist if necessary. I'm sure we've all heard instances of off-duty officers aiding or assisting in various ways. It's possible that they had all their police radios with them, I don't know, but it's a good bet that lots of officers use scanners to maintain their situational awareness, so to speak.

I've been following auctions on EBay for Yaesu FRG-9600s. The last four I've seen have call been canceled by EBay before they were completed. I can only assume this is because these radios are capable of receiving the cellular freqs. Does anyone know if this has become a general policy of EBay recently? I say recently since I _have_ seen auctions for the 9600 go off before. It's only within about the last 3-4 weeks I've seen them being cancelled.

Yes it is a policy of Ebay although it is very inconsistently enforced.
The Ebay powers that be must have figured out that 9600's are cell
capable and cancel every one they catch. As of late I have also seen an
AOR 2002 and a cell capable Win Radio cancelled. The 200x series of RS
scanners seems to hold on.

From: Soy Bomb II <mm11720@navix.net>
Message-ID: <83cafb$i10$1@iac5.navix.net>
Source record: 99664

(Icom R2) I have been told by Icom that a priority channel can not be set and used while in a programmed bank scanning mode. In other words I want to flag a frequency as priority and have it check it and skip back to it if there is any activity while doing a scan of my own programmed in channels (0-49).

They say you can only do a frequency scan (such as an edge scan) the mark a priority frequency. No ability to mark anything priority if you are doing a scan of channels you programmed into the unit.

Have any of you owners of the ICOM R2 been able to set your scanner to do this?

Thanks, Experts,

Dex

I have seen the setups using Trunker and ETrunker with two scanners to allow scanning of trunked systems. Is there some reason you couldn't use a single computer controlled scanner to do this? I'm thinking of an arrangement where you decode the data channel, use the computer control to tune the scanner to the appropriate channel to follow a conversation, then go back to monitoring the data channel when a transmission is completed. Would require two serial ports, but it would be easier for me to get another serial port than another scanner.

Source record: 99445

$10 includes postage.
Inexpensive gift for fellow scannists.

Fits the Pro-43, 39, 60, and 64 models. Leather with
belt clip and a perfect rectangular cut out to expose both
AC and charging jacks on the side of the aforementioned
models. In the original Tandy wrapper, including
silica package to remove moisture. Tandy introduced leather
scanner cases in its 1997 catalog, which left the 43 and the

39 out.

For an "In Action" photo of these leather cases, see
http://rampages.onramp.net/~peabody/scancase3.htm

6246. Ft Gordon, GA Freqs ?

Newsgroup: rec.radio.scanner
Date: 1999-12-17 00:00:00 UTC
From: smokedtofu@aol.com
Message-ID: <19991217162129.14652.00000145@ng-cj1.aol.com>
Source record: 99447

Im looking for frequencies for Ft Gordon, GA. Does anybody know if they are on one of the 400mhz trunked systems, or are they using lowband. I've searched and found the freqs for the trunked system that Augusta and Richmond County use but have not found any "for sure" frequencies in use at Ft Gordon.

Any help would be greatly appreciated. Thanks

Monty

Pozilla's WinScan is very popular. Easy to use and very nice
feature set. I recently posted a review of it on my site. By
using it, you'll be able to turn your first generation TrunkTracker
into a second generation (can scan multiple trunked and conventional
systems simultaneously!)

Try National Electronics web site for good price on it.

>a lil.
>Adam

Actually its not eBay's fault. eBay will only cancel an illegal item when it is brought to their attention by another user. eBay doesn't (one their own) monitor each listing placed on their site. So, if you put a radio capaible of receiving Cell or "Full 800MHz" and it gets cancelled, this means SOMEONE SNITCHED ON YOU! Probably someone who doesn't have anything better to do then look over the eBay listings all day long and getting a POWER kick out of turning in someone trying to make a buck.

There's a Snitch amoung us!

George
http://www.flash.net/~av8tor/radios <-RadiosOnLine eZine for the RadioHobbiest
PS: Read my editoral at RadiosOnLine on eBay for more info. eBay's not the one to blame, its people in general....

Message-ID: <12421-385A4FFF-99@storefull-628.iap.bryant.webtv.net>
Source record: 99551

Here is a real nice base scanner that has 400 channels, and covers a
WIDE range of frequencies.
25 MHz -- 1300 MHz
Its an older unit, but it works very good,

it covers all of the 800 MHz band, and for those interested, it does
pick up a lot of cellular, but this is ILLEGAL, so you shouldn`t listen
to cellular phones, its AGAINST THE LAW.

From what people tell me , this scanner was built back when it was
legal to listen to cell.
It has some normal wear, but not much.
It also has; AM, FM, WFM modes, and the steps are 5 kHz, 12 kHz, 30 kHz,
50 kHz. There`s no box or manual.

The BOTTOM LINE is this scanner covers a lot. I MUST BE NUTS for selling
this one.
The Price is $200.00 + $15.00 for priority shipping (Postal insurance
included) to any address in the U.S.
sorry no C.O.D.`s or personal checks.
I only accept a U.S. Postal money order. Shipping usually takes 3-4 days
to your door after I receive your money order.

If interested please contact me by email; max_it_out@webtv.net
Hurry while I still got it, because I saw this same scanner sell for a
lot more than I`m asking for.
HAPPY HOLIDAYS
regards,
Bob Balent

The new RS scanner that is replacing the Pro 90 is capable of handling both 'Motorola and GE/Ericcson systems'. This is the information that is on the box and also in the manual that comes with it. I have seen the 94 but since the area I live in doesn't have trunking I am sticking with my 90 in conventional mode.

Source record: 99566

Are cars or motorcycles ever auctioned on Ebay? It doesn't even have to be a 'high-performance' motor vehicle to be able to exceed what for most states is the maximum speed limit of 70MPH. Therefore, following the Ebay 'logic' as applied to some scanner auctions, the car or motorcycle auctions should also be questionable. Since some streets have speed limits of 25MPH or less, mopeds & bicycles should also be verboten, and a committee should be formed to research max speeds of skateboards & inline-skates.

Ebay seems to dare get involved with anticipating illegal use of a legal product... Let's ensure that they either cease their selective enforcement of this haphazard policy, or demand they expend the resources to pose/enforce similar regulations universally. If they have a precedent of taking such action, then it seems to increase the possibility that they could & should be held civilly & criminally liable for failing to act in a similar fashion for anything auctioned off on Ebay which is misused. For example, me winning an EBay auction for an antique butter knife (legal to own/sell, just like my FRG-9600), and subsequently murdering someone (illegal to do) with that same butter knife. If EBay anticipates someone might inappropriately use a radio receiver, they should also anticipate someone might use the butter knife illegally.

Or, we in rec.radio.scanner can agree on some sort of special code phrase to denote that the product happens to cover certain spectrum which is perfectly legal for the device to do so, yet is illegal in the United States for an individual to intercept a certain type of communication which uses that spectrum.

I propose that if we want to auction a receiver capable of receiving all of 800MHz on EBay, we simply include the phrase "I LOVE JESUS!" in the EBay posting.

Follow-ups with prospective buyers can be full of euphemisms such as "Yes Fred, I can confirm to you that this radio I'm auctioning has been blessed of the love of Jesus!"

Hi Tim!

The difference would be the feds don't limit horsepower or speeds at the manufacturing end of cars but they do limit frequency coverage in radios being sold here. The legalities of selling cell capable scanners is enough to make any corporate lawyer nervous. Might it be E-bay isn't concerned about your use or illegal use of it but instead they fear being the middle man in the sale of a dreaded and evil cell capable scanner. They may be anticipating the feds going after them as an accessory in an illegal sale or something on that line. Who really knows what the feds could try but I wouldn't want my business to be the test case here and venture to guess many other businesses won't care to go that route either. E-bay wants to make money not legal history for the scanner hobby. Can't really blame them even if they are wimps.

Merry Holidays!

Glenn

Joseph,

I would doubt that EBay knows or cares about the laws in place
regarding cell capable receivers. Most likely the sellers back
out because they like to publish No Reserve auctions -- but if they
find the bidding isn't going high enough, they drop out, and wait
a few weeks, and put it back out there.

If it was cancelled due to EBay(and the resulting message says so) then
it's most likely something like wrong information provided, like the newer
credit card requirement. If the credit card info is bad, Ebay will cancel
the auction.

Ebay definitely does not have the time or staff to monitor all the
items for every possible goofy ass law that some politician came up with.

OK, so I want to monitor the MDT (police cruiser screen). My
understanding is that I need to mod the radio so it has disciminator
output, I need a 2 or 4 level FSK, and I need some software program.
Is this correct and what frequencies are the MDT transmitted on?

Thanks.

There is a fundamental distinction that has been lost here . It is NOT
illegal to sell a vehicle in this country that is capable of speeds
fare in excess of the legal limit, as are Porsche 911 and 928's etc.
IN the case of the vehicle, the way the laws is written it is only
illegal if you operate it in excess of the posted speed limit.

The current law however forbids both the operation AND SALE of
receivers that can receive in the cell phone bands. Consequently Ebay
is protecting itself from potential liability by not permitting a sale
which is per se illegal.

I won't debate the logic in the law, or the rationality.

Yes Ebay pulls ads blatantly advertising cell capable scanners. You can post a cell capable scanner with a picture of the frequency displaying a cell frequency and they don't pull the ad, but if you blantantly state "Cellular Unblocked", "Cell modified", "Unblocked", "Cell capable", etc. then there is a very good chance that sometime before the end of the auction it will be pulled. Benefits: If you advertise a cell capable scanner on ebay and blatantly state that and get 5 or 6 bids and then they pull the ad, well too bad for ebay! You just contact the interested bidders who bid on it and find one who wants to buy it, negotiate a price and bingo its sold and you don't have to pay the Ebay fees cause THEY PULLED the AUCTION! This happens all the time! So if you bid on something that might be pulled then print out a copy and if they pull the ad then contact the seller and see if you can't make a deal without having to compete with others! Take care and Happy Holidays. Wayne.

Consider the new Yaesu VR-500. It provides similar functionality
to the DJ-X10 and IC-R10, but is smaller and requires a lot
less current. Ergo, the VR-500 runs twice as long between recharges.

In the VR-500, the frequency and text label are both visible at the same
time.
It can scan combinations of memory banks.

Actually Norm it is a crime to listen to certain things, cell phones being one of them. You don't have to pass information on to be on the wrong side of the radio law anymore. I am sure the confusion is many of the legal things one can tune into are a no no to talk about or use the information for gain.

Norm,
Your information is incorrect. It is illegal in the United States to monitor cellular telephone calls whether or not you divulge anything heard to anyone. It is even illegal to conspire to listen to cellular telephone calls. It is also illegal to listen to cordless phone calls.

I was hoping that once a transmission was ended it would be possible
to go back to the data channel fast enough to catch the information
telling what channel the next transmission would be on, so it
wouldn't be monitoring only the voice channel, but continually
switching back and forth between the data and voice channels.

Trunker is meant to monitor the entire system and does a wonderful
job at doing it. There is no way for a single scanner to monitor the
entire system and an audio channel at the same time. Doing so would
require that the scanner monitor 2 frequencies simultaneously.

Having said that, the situation you describe is how Uniden scanners
decode trunked systems. There is no reason why Trunker could not
do this other than that it was not written for that purpose. All it would
take is for someone to write the software.

Source record: 99592

I just picked up a Pro-94 for $199. It's my first scanner. Now I'm wondering if the BC245XL2 is a better device. There's no PC interface on the Pro-94, and there is on the BC. Advice/thoughts on the two models would be greatly appreciated.

AOR sells the OS8200 option cable. Plug itself is hard to get and not a standard plug. Looks alot like the PC USB port.
HP uses the same type of cable for the Jornada palmtops..but they also only sell the cable..

yasmin2:

But Rep Jim McDermott received NO punishment for accepting & making
it public. He KNEW it was illegally obtained & used it for political
purposes to try to further damage Gingrich.

And now we know that Gingrich broke no law & the IRS
has exonerated him. And yet his reputation was damaged by
people like McDermott who received NOTHING.

I think thant it was unfair.

I think there's a certain poetic resonance that the only person to face jail as a result of Clinton's crimes against humanity is his accuser, Tripp.

The picture would be full and complete if only a way were found to imprison Wiley, the woman he sexually assaulted the day her husband died, and that woman he raped earlier on.

Except for that, I think this is all just about perfect.

6300. Radio Shack 900mhz Cordless Phone Model ET-1108 Question ?

Hi,

I have a 900mhz RS phone model # ET-1108which is not a spread spectrum phone.
The phone has 40 channels.

My question is does any body know what the 40 frequencies are for this phone ?
Can I listen to the duplex transmission (both ways) from the base frequency ?

Any help would be appreciated.

Please email responses to joegizjr@aol.com

Happy Holidays !!!

As long as the auctioneer does not mention any cell capability, or "Full 800", or modified, or modifiable, eBay won't ususally do anything. According to eBay's statements, they make no attempt to monitor auctions and rely on tips for "questionable" items.

Does anyone out there know the frequency band in which motorsports teams in the UK and Europe communicate with their drivers? I want to get a scanner for my son who is a TOCA fan.

Thanks

Peter Quinn

Appears to be... if you click on the links below, it will take you to a picture... one vertical element, and three ground radials, like a mini-ground plane... very mini! I guess you could look at it as a 800MHz vertical dipole too.

I had a idiot tell me they never have had infrared leds, I picked one off the shelf after looking 5 minutes. There shitty return attitude really ticked me off on one of their junky scanners once. I paid cash so If it did not work properly I would not have to wait on the credit to post on my bank card. I had to go to three locations before they had enough cash to pay up. This is retarded not to have 300.00 cash on hand!

You can also use the BC245 Interface software for free. I downloaded it a while back and it was quite primitive, but I downloaded the most recent version this evening and it is much more refined. In fact I am very impressed with this freeware program. You can download it at http://www.iquebec.com/senss/

I hadn't lost that distinction. I know it's
illegal to monitor cellular, but I didn't/don't think it is illegal to
sell
a used, unmodified scanner which happens to receive all of 800MHz! I
know
it is certainly not illegal for me (as the original owner) to own the 4
or 5
I have which do receive full 800MHz.

> I won't debate the logic in the law, or the rationality.

Understood, but please cite the federal law which makes it illegal to
sell a receiver (not a 'modified' one, but for example, an older
FRG-9600
or PRO-2004) which was manufactured with the capability to receive all
of
800MHz.

Just because it "performs," doesn't mean it isn't a
gimmick. Likewise, if you recently replaced a 1954 Edsel & replaced it
with
a 1974 Pinto, you'd be singing praise for the Pinto & consider it a
technological marvel just like you're doing for the MAX 800. Meanwhile,
those of us with 1990s era vehicles will think you're rather silly.

If you stop to take a look at that antenna, you're realize it is a
well-built,
very primitive & simple design that's extremely inexpensive & easy to
construct.

The Grove Web ad --in typical fashion-- is full of puffery to fool
fools, but
devoid of hard, technical specs. Why don't you email Grove or MAX
Systems
& ask them what the gain (in dBi or dBd) is for the $40.90 antenna, and
how much effect the
ground plane elements have for receiving 800MHz signals...

For all of about $16, I had an 800MHz antenna from Centurion
(http://www.centurion.com) custom made, and centered on 850MHz.
Using it on my BC-235, AR-8200, Opto Scout, et al, it works just as well
as the
MAX 800 which I also have. It is a lot cheaper, and is a heck of a lot
less obnoxious
looking.

For base applications, a 3dB-gain or 5dB gain cellular antenna
(preferrably with better coax) will outperform the MAX 800, as
would a 7 or 8dB gain cellular antenna made for marine applications,
and only the 7 or 8dB gain marine cellular might be more expensive
than the MAX-800!

I'm not saying the MAX-800 is junk, but I am saying that Bill's
'high recommendation' is...a crock! ;)

> insulator.

That white PVC pipe end-cap ain't there as an insulator, Bill. It
provides
a little bit of weather proofing for the $2.00 SO-239 and the steel rods
which are
simply soldered onto it. It also assists in mounting the antenna on a
mast, and
tends to obscure how incredibly basic & inexpensive the design is.
Sorry, no
low-noise amp or pixie dust hidden under the PVC cap!

> How does your homebrew one work?

Assuming he knows how to solder & measure the lengths of the
elements, his homebrew works at least as well as the MAX-800.

Excerpt from the FCC fact sheet, June 1999

Of those statutes that may govern interception of radio
communications, the FCC only has the authority to interpret
Section 705 of the Communications Act, 47 U.S.C. Section
605,
"Unauthorized Publication of Communications." Section 705 of
the
Communications Act generally does not prohibit the mere
interception of radio communications, although mere
interception
of radio communications may violate other Federal or State
statutes. In other words, if you happen to over hear your
neighbor's cordless telephone, you do not violate the
Communications Act. Similarly, if you listen to radio
transmissions on your scanner, such as emergency service
reports,
you are not in violation of Section 705. However, a
violation of
Section 705 would occur if you divulge or publish what you
hear
or use it for your own or someone else's benefit. An example
of
using an intercepted call for a beneficial use in violation
of
Section 705 would be someone listening to accident reports
on a
police channel and then sending his or her tow truck to the
reported accident scene in order to obtain business.

One important thing to keep in mind is that you *do not* have to have two high dollar scanners to do this. The scanner that monitors the data channel can be any "old" scanner that does 800, and can be modified to include a discriminator tap. I use my old Pro-34 for computer monitoring... the *only* use it gets these days.

Dewey

From: petrow@my-deja.com
Message-ID: <83gl2d$sg9$1@nnrp1.deja.com>
Source record: 99480

I have a BC895 with discriminator tap and was curious how Etrunk would behave if only the one scanner was used. Initially the BC895 was manually set to the control channel to start things off in the right place. Then the radio was put in remote mode and Etrunk was started. It decoded the first call and sent the BC895 to the correct voice frequency. After the transmission was over, nothing happened. The program had no way to return the radio to the control channel so there it stuck. I did have trackscanpark set to the control channel frequency, but without a disconnect signal from the control channel, the radio never made it back to the park frequency. As David noted, the program could be written to behave as you wanted, but it presently is not. To do so would throw away much of the power of the program - the ability to see total system activity real time and to respond to a multi-level priority scheme instantly.

EFJohnson Multi-Net trunked systems are popping up all over the place for Public Safety. Sooner or later someone will think about adding that technology to their scanner or computer/receiver setup...

6358. FS: JIL SX100 scanner

Newsgroup: rec.radio.scanner
Date: 1999-12-18 00:00:00 UTC
From: John Black <jmblack@compuserve.com>
Message-ID: <385BC5C1.F339AA4D@compuserve.com>
Source record: 99483

This JIL scanner covers the usual VHF-LO, VHF-HI, UHF bands. Has 16 channels, 2 weather band channels, search, clock, fluorescent display. Not many of these around! Nice all metal construction, good intermod rejection, excellent audio. This one is in great condition. I have the screw in antenna for it, works on 12v.

Pictures available by e-mail. Asking $50.

Greetings,

Is it possible to restore the "lost frequencies" in my 1500i Winradio?
If so could someone point me in the right direction?

Thanks and 73,
Clarke

This is a 16 channel base unit, with the usual Bearcat features. Green fluorescent display. Works fine, cosmetics are fair, good backup scanner. I don't have the little screw-in antenna or the 12v AC adapter, but will throw in a telescopic Radio Shack scanner antenna that

plugs in the back of the radio.
Asking $40.

Please e-mail if interested.

Well, I can tell you this... compared to the stock telescoping whip antenna that comes with the BC895-XLT, or a Diamond Wide-Band rubber ducky, or mag-mount 36" dual loading coil, wide band mobile antenna, the MAX Systems antenna provided the clearest, signal, with full quieting! That being said, I still highly recommend it! And don't knock "crocks"... that's what beers made in!

Date: 1999-12-18 00:00:00 UTC
From: hobjr@vol.com
Message-ID: <385BE3D9.AAC7B1D@vol.com>
Source record: 99497

I own a AR8000 scanner and just bought 4 AA Ni-MH batteries for it because my Ni-Cd's crapped out. These new batteries are 1500 mAh! The supplied charger seems to supply about 100ma to the new batteries (measured from battery to post inside scanner) at 6.2 volts. How long should these charge for???

I do not want to toast the batteries...they were expensive!! I have read about charging them to long and the heat will kill them. Do I need an electronic charger...can I build one from a kit?

I just plug my BNC RG-58 cable from my Inverted Vee into the jack on the top.

For SSB - it seems to work fairly well, although it doesn't sound the same as a Kenwood R-5000!

I found that I had to turn ON the attenuator to hear the SSB signals - that made a BIG difference.

Almost any short-wave receiver - even a little Sony 7600D will be more
sensitive.
However if you can connect a big antenna and manage to avoid overloading you
will get pleasing results.

If Tandy/Radio Shack and Uniden Bearcat perceive a public demand for a product then you can expect it to be developed and sold. Let the scanner manufacturers know what you want to see...I have. The response will usually be something like 'we don't offer something like that for sale at this time but keep looking.' If everyone keeps asking and enough people inquire about an item, say an ASTRO (digital trunking) capable scanner, then you can expect to see one for sale. So let the manufacturers know what you want.

Probably reasonably well if you give it a respectable antenna. The
9000 is one of the few scanners with an AM bandwidth narrow enough to
be almost useful on the HF bands, it is still a bit wide, but the
narrow AM is a whole lot better than the 12-16Khz on AOR8000, ICOMS's
etc.

6400. Re: Ignition noise, Dodge Caravan 99

Newsgroup: rec.radio.scanner
Date: 1999-12-18 00:00:00 UTC
From: John Trevor Harris <wb6sub@earthlink.net>
Message-ID: <385C8246.B8EA091B@earthlink.net>
Source record: 99525

I have found also that there are screw on caps on your spark plugs. If one of these is loose or the cap that clips on to it is loose..i creates a great deal of noise of hf. So i changed my spark plugs and when installing the new ones...i got a pair of pliars and tightened down each screw on head and before re-installing the spark plug wires on the spark plug i took that same pair of pliars and squeezed on the clip that clips onto the spark plug and made the circular area a little smaller. That took care of my ignition noise.

Can anyone tell me if Sams made a series of photofacts on scanners? If so what was the name of this series and how many volumes (books) were in it. If someone has any for sale please let me know. I am looking for a service manual on Electra Bearcat 210 and 220 scanners but would also like the entire Sams set if it was ever made.

I do not get to this group much so please respond via email.
Thanks!

>Mvg, Peter van Bommel

Here you go:

Shuttle Frequencies
==========
The Space Shuttle transmits on three frequency bands: UHF, S-Band, and
Ku-Band.
The UHF frequencies are simple AM voice and are very easy to copy.
These
frequencies are used for launch and landing operations, EVA
operations, and as
an additional voice downlink when other channels are in use for the
current
ground station has no S-Band capability.

The frequencies in use are:
296.800 MHz : Air-to-ground, or Orbiter to suit
259.700 MHz : Air-to-ground, or suit to Orbiter
279.000 MHz : Suit-to-Orbiter, or suit-to-suit
243.000 MHz : Standard military aircraft emergency frequency

The S-Band system is one of the primary Orbiter downlink bands. The
voice
channels are digital slope delta modulated and are multiplexed in with
the rest
of the Orbiter telemetry and is very difficult to copy. Much of the
downlink
TV is on S-Band also, but is wideband FM and should be easy to copy.

The
frequencies are:

2287.500 MHz - Primary digital downlink
2250.000 MHz - Wideband FM with either main engine analog telemetry
during
launch, or TV during orbit operations.

The Ku-Band system is used in conjunction with the tracking and data
relay
satellites and is used much more heavily in Spacelab flights than in
others.
The data rate is very high (50 Mbit/s). These transmissions are
directed
to TDRS satellites in geostationary orbit on a frequency of 15.003
GHz.

(Information via WA3NAN, and WA4SIR)

Shuttle Audio Retransmissions
==========
Excerpt from the Goddard Amateur Radio Club (GARC) Shuttle
Retransmission Fact
Sheet (from Jim Blackwell, N3KWU, HRSBLACKWELL@deblur.gsfc.nasa.gov)

Retransmission of Shuttle air-to-ground audio from the GARC (WA3NAN)
may be
heard on the following frequencies:

Frequency Mode Antennas
(MHz)
3.860 SSB LSB N-S/E-W Dipoles
7.185 SSB LSB N-S/E-W Dipoles
14.295 SSB USB 3-element Yagi
21.395 SSB USB 5-element Yagi
28.650 SSB USB 4-element Yagi
147.45 FM Simplex Phased vertical

Where SSB is Single-Side-Band and LSB, USB indicate either Lower and
Upper Side
Band. A short-wave receiver possessing a Beat Frequency Oscillator
(BFO) is
needed to receive these transmissions.

New Dutch Software for FREE

Look on http://www.scanner.webfreak.nl/ for Frequentie-base software for scannerlisteners.

The program Frequenty-base was made by Bert. This program is made for keeping your frequenties updated and correct, specially for computer-scanners.
Scanner-base is a handy database, already containing over 12.000 frequenties, that you can
expand as far as you wish. Install notes: Run Setup.
The program is FREEWARE and is FREE to copy and/or distribute.
This means that NOBODY MAY CHARGE ANY FEE, EXCEPT HIS/HER USED MATERIALS.
For suggestions, remarks or questions you can contact Bert > bvdkamp@hetnet.nl

Eric &#65533;

http://www.scanner.webfreak.nl/
le-baron@multiweb.nl

Program too small to fit into memory.

Here's a good one! Last week I went into a RadioShack in Lancaster, PA. I bought $15.97 worth of stuff. I hand the man a $20.00 bill, then I said "oh, wait a second, I've got 2 pennies". He looked confused (very young kid working). So, he looks at the receipt, then hands me $15.97! Instead of giving me my change of $4.05, he hands me the total of the reciept which was $15.97!!! He then looks at me and says "Have a nice day". I in return say, "Thank you and I will!".

I bought $15.97 worth of stuff for only $4.05, now you tell me how does Radio Shaft stay in business???

I bought my PRO-92 last week, programmed in the Hillsborough County system, placed it side by side with my BC-245 XLT, and returned it 3 hours later.

The PRO-92 has some excellent features (Alpha Tags, WX S.A.M.E., CTCSS,) but the overall performance was less than to be desired for me. It was having trouble holding onto the control channel while the BC-245 XLT had no problem whatsoever. Missed many calls and replies. It has the potential to be a great scanner but needs some fine tuning.

I did purchase the PRO-94 as a secondary EDACS capable trunktracker and have been happy with its performance. While still not as versatile as the BC-245 XLT it does the job and the price is considerably less than the PRO-92 ($199 vs $349). It also has the WX S.A.M.E. capability that I like. 1000 Channels (But only 500 at a time can be scanned in two seperate master banks) and you can scan multiple trunked systems at the same time or conventional, but not conventional and trunked at the same time. I basically just wanted a second scanner capable of EDACS monitoring and it suits my needs just fine.

Some people have had good luck with their PRO-92 but from what I have read it appears that the majority have not.

Good Luck with yours.

The 3000XLT is a 12-volt DC radio, regardless of version. You'll need to buy a 110V wall wart to power your UBC model, but that's all. Cost should be $15 or less.

Source record: 99315

What he said, but you have to add about 40% because of charging losses. I reckon your 1500mah batteries would take 1500 x 1.4 = 2100 / 100ma = 21 hrs. It's also seems to be the concensus that charging at any rate lower than 1/10 the maH rating of the battery constitutes trickle charging, and it won't overcharge your batteries to leave them on longer. Wouldn't do it indefinitely, though.

I believe it was 1934, but, more importantly, this law is broken every day by THOUSANDS of people, and the violations are heard by millions of people, however, nothing is done about it. That's right. Every time a traffic reporter broadcasts information over the broadcast radio or TV that he has learned by _monitoring police radio_ he is breaking the law.

Hold on, now. I'm not saying that they shouldn't do this. What I _am_ saying is that they shouldn't be breaking the law. If what they're doing is a good thing, then the law should be changed, NOT ignored.

BTW, there is another law, just passed a few years ago, that DOES make it illegal to even LISTEN to cellular calls, let alone devulge them, or record them. (This law apparently does NOT apply to retirees who listen to Republican cellular converstations and turn the recordings over to Democratic Congressmen...)

The VICTIM'S fault???? What's wrong with you? If your daughter gets raped,
is it HER fault for not being "rape proof?" Or, is it your fault for not
making her "rape proof?"

No, the criminal is responsible for his actions, and, until society holds
him to that responsibility, will continue to abuse society.

And, YOU, sir, are part of the society that is to blame, since you would
make the victim responsible for the crime, rather than the criminal!

6431. ISO: Fast Food Frequency Pairs

Newsgroup: rec.radio.scanner
Date: 1999-12-19 00:00:00 UTC
From: "Robert H. Eisner" <rheisner@pacbell.net>
Message-ID: <385D1AEC.7E2D@pacbell.net>
Source record: 99322

Hi All,

I'm currently in the process of updating my Fast Food Frequency List for the USA and would like very much to fill in some of the gaps and missing pairs of frequencies that have been outstanding the past few years. I've managed to match up about 90 percent of the frequencies that have been reported since 1991. The 4 frequency pairs that I've been unable match up are 31.240, 35.120, 35.880 and 35.960. I'm also pretty sure that the 4 VHF-low frequencies are each paired with one of the following 151.745, 151.775, 151.805 and 151.835. I think one of these (31.240) is pretty active in the San Diego area a couple of mile from Fisherman's Landing on the main drag towards Point Loma.

Anyway, I would be very interested in hearing from anyone that may have some additional information on the missing frequencies. I'm also interested in the any URLs that point to other Fast Food List on the WEB.

For those of you wondering "Why would anyone want to listen to Fast Food Drive Thrus?" please review the following answer which has been posted numerous times to Usenet and this mailing list.

http://www.deja.com/[ST_rn=ps]/getdoc.xp?AN=548568676&fmt=text

ps: A fairly current list of Fast Food Frequencies can be viewed at the following URL http://pages.prodigy.net/hounddog/fastfood.txt

T.I.A.

Bob

==========

The frequency pairs marked with an "*" are either odd or missing.

Headset/Speaker frequency pairing for VHF-low / VHF-high band:

Speaker Headset

For Sale: Bianchi Leather Swivel Radio Case - NEW!!!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=220108952

Only 2 months old!
Leather w/swivel attachment
Designed to fit any medium to large radio. Was used previously with a Motorola Saber but can be used by any Vertex, Maxon, GE, etc. portable radio, and it has a stretching strap to accomodate just about any radio
No scratches or other cosmetic defects

This unit is in excellent shape (10 out of 10 cosmetically). I bought it only 2 months ago and have only used it once! Selling because I no longer need it (have a different radio now). Please email with any questions. Good luck, and thanks for looking!

Hi Bill,

MVT-9000 work quite well in HF band (when remember fact, its scanner) if
you use enough "small" antenna to avoid front end overload.
or use adjustable attenuator (can be found in TV shop's) or fixed
6db/9db attenuator... that attenuate incoming signals enough to get it
in AGC working area...
Also somekind preselector made big difference...

i've use it as portable HF receiver and it work for me in that use...

Feel free to ask more!

Mika

There are some misconceptions in this message. The first one is that
reporters generally just go ahead and broadcast whatever they hear on the
scanner. Having been a dispatcher in a
9-1-1 center, I can tell you that they call first. In fact, they don't
broadcast tips or anything else without contacting someone first for
confirmation, which also gets them off the Section 705 hook.

> BTW, there is another law, just passed a few years ago, that DOES make it
> illegal to even LISTEN to cellular calls, let alone devulge them, or
record
> them. (This law apparently does NOT apply to retirees who listen to

> Democratic Congressmen...)

Another misconception. Those people were prosecuted and convicted, although
it didn't get a lot of mainstream media attention.

Furball - here is a serious answer below.

Subject: FAQ - Who is Bill Cheek was:Re: BILL CHEEK INDICTED 9/30/99
Date: 10/06/1999
Author: J o h n M a c k e y <jmackey@usa.net>

This same question was asked a few months ago & I gave this anser
at the time. It is still correct. Perhaps I should make a regular FAQ to
post on this NG to answer the question you pose

Bill Cheek is a man who lives near San Diego. He used
to be active on Fidonet but then had to leave due to reasons
we won't speak of now. He then became active on this NG & the
internet but was again the cause of much trouble. Various problems
with Mr. Cheek's action's resulted in Peter Laws kicking him off of
the "Scan-L" mailing list. More similar problems with Mr. Cheek
caused him to have his internet access revoked by his
Cable company ISP last summer. Recently he was briefly held by
federal authorities and has been charged in federal courts with
various illegal actions in regards to the use of scanners. He is the
owner & operator of a company called "Comtronics" & has produced
a few books based on information he has complied
from various sources.

Note et el - Mr. Cheek has stated he is several different types of
"Engineer"
but has never been able to produce any Engineer credentials from any type of
public or private body issuing such credentials. The most recent news has
been
reported that on SEPTEMBER 30, 1999,
A FEDERAL GRAND JURY IN THE EASTERN DISTRICT OF
NEW YORK INDICTED WILLIAM CHEEK ON ONE COUNT OF
18 USC 2512 (1) (A), (SENDING THROUGH THE MAIL OR
CARRYING IN INTERSTATE OR FOREIGN COMMERCE, ANY
ELECTRONIC, MECHANICAL, OR OTHER DEVICE, KNOWING
OR HAVING REASON TO KNOW THAT THE DESIGN OF SUCH
DEVICE RENDERS IT PRIMARILY USEFUL FOR THE PURPOSE
OF THE SURREPTITIOUS INTERCEPTION OF WIRE, ORAL, OR
ELECTRONIC COMMUNICATIONS.).

Note et el #2 - Recently there have been un-confirmed rumors that Mr. Cheek has lung cancer (he has smoked for many years) and does not have any health insurance.

I hope this has been of help.

Bill

I use an old Yaesu FRT-7700 passive tuner (ATU) between the antenna and the MVT 9000. You can peak the signals up on the band of interest and apply up to 60db of attenuation. Using this I can hook up to just about any antenna without worrying about overloading the set.
These tuners are frequently found at radio rallies and junk sales and after fitting bnc plugs to the leads will work with just about any scanner. Probably cost about 20 GBP.

Mike

As a person who has owned a MAX 800 for years(mine is so old, it's the
original design with FOUR radials), I can say several things about it...
1.I KNOW that the price was less than $40.00($30 or so maybe).
2.it IS a bit overpriced.
3.it works quite well on 800/900-surprisingly, it does a pretty good job
on 400-500 as well.
4.the antenna, at least the version I have is constructed quite well, and
has stood up to much abuse with no problems.
5.indeed, it's just a simple ground plane, using a inverted SO-239 coax
connector and pieces of what appear to be welding rod for elements.

6451. BC245 Computer control

Newsgroup: rec.radio.scanner
Date: 1999-12-19 00:00:00 UTC
From: Brian Trotta <btrotta@hotmail.com>
Message-ID: <5kxdOI+1v+4ArxE5NS27MyeRIL90@4ax.com>
Source record: 99342

I've been trying to use the computer control feature with my new BC245, but I keep getting error messages saying that the program can't find the radio.

I've got the right comm port selected so that's not the problem.

One problem I do have is that when I try to hit ``E/remote'' after selecting the baud rate for the radio, it won't accept the entry -- I don't get the two beeps the manual says I should.

Could this be the problem? How do I overcome it?

Any help would be appreciated.

Source record: 99393

Here is a real nice base scanner that has 400 channels, and covers
a WIDE range of frequencies.
25 MHz -- 1300 MHz
Its an older unit, but it works very good,
The 800 MHz band is WIDE OPEN and picks up cellular. (thats the
way I bought it)
From what people tell me , this scanner was built back in the late
80`s before the government started to order the cell block.

It has some normal wear, but not much.
It also has; AM, FM, WFM modes, and the steps are 5 kHz, 12 kHz, 30 kHz,
50 kHz. There`s no box or manual.

The BOTTOM LINE is if your looking for a scanner that covers a LOT more
than the "Dailey Specials" that you see for sale everywhere, then this
is it !

The Price is $200.00. FREE priority shipping (Postal insurance is $3.00
extra) to any address in the U.S.
sorry no C.O.D.`s or personal checks.
I only accept a U.S. Postal money order.

Shipping usually takes 3-4 days to your door after I receive your money
order.
If interested please contact me by email; max_it_out@webtv.net
Hurry while I still got it, because I saw this same scanner sell for a
lot more than I`m asking for.
HAPPY HOLIDAYS
regards,
Bob Balent

Hi,

I track county services on VHF and UHF, state police on VHF, and
trunked city services. The 94 can't do trunked and conventional
simultaneously which unsold it for me, after I had it home and
programmed. The BC245XLT does this, and can also trunk both EDACS
and Motorola systems at once. Computer control/setup is a nice
added feature.

Cheers,
Peter

6458. Need help with Uniden MR-8100

Newsgroup: rec.radio.scanner
Date: 1999-12-19 00:00:00 UTC
From: ·TechnoDragon· <tdragonn@blarg.net>
Message-ID: <385D86A5.C9348211@blarg.net>
Source record: 99399

I picked up a usiden MR-8100 a while back and foiund it to be a nice
little scanner. However, I have found it seems to open the quelch and
stop scanning on half the frequencies I entered, even when there's no
activity on that freq.
Now, I understand birdies, but I doubt that exactly half the
frequencies I entered are birdies by coidince.
I'm guessing all I have to do is re-tune it. Has anyone else had this
problem with this radio and been unbale to fix it? Has anyone
successfully fixed this problem if you've had it? Will the service
manual explain re-tuning? Is the service manual still availiable from
Uniden?

Any help anyone can provide would be greatly appreciated.

Hi, Brian,

After you set it up for PCCON and the desired baud rate, I think
you have to turn it off, then back on normally. Then you and hit
E and get the desired 2 beeps. Worked for me without a hiccup.

Cheers,
Peter

This seems to be the general consensus. Actually, no one has stood up for the Pro-94 in this thread. This is my first scanner (except for the Allied Patrolman Pro VHF-7 that that my mom listened to when I was a kid). and I didn't do quite enough research before I bought it. I don't dislike it, but I like the additional features of the BC245XL2. I'll be taking the Pro94 back to RadioShack tomorrow.

cheers,

Come, now. When the "traffic chopper" hears the dispatch to the traffic
accident, you're not trying to say that they call the 911 center for
confirmation? No, they put it out over the radio station, then fly over to
take a look and confirm the length of the backup, which they also broadcast
over the air. Again, I'm not saying this is a bad thing, but that it IS
against the law. So, either they should stop what they're doing, or,
better, the law should be changed. That's the REAL problem. Laws are only
enforced when the government feels like it.

Ah... unlike the Linda Tripp case, where it's making national headlines
before anything even happens? Where could one go to get more information on
the scanner case? I'd like to find out how bad the old folks got their
hands slapped.

Of course, nothing happened to the Democratic Congressman who accepted the
tape and withheld the information from the authorities.

6468. Johnson Trunking Scanner

Newsgroup: rec.radio.scanner
Date: 1999-12-19 00:00:00 UTC
From: Weasel <bkhymer@earthlink.net>
Message-ID: <83k51p$nh2$1@fir.prod.itd.earthlink.net>
Source record: 99409

Is the Pro-92 the only scanner that will track the EF Johnson Multi-Net II Analog system?

I hate to shell out 349.00 for the Pro-92.

Thanks in Advance.

6469. The PRO-92 in the St. Petersburg/Clearwater area

I just bought my PRO-92. This is my first trunking scanner.
Seems kind of tricky to use. Has anyone had any experience trying to
use this scanner to pick up GE/erickson systems (Clearwater PD)?

Has anybody experimented with the cloning function?

Any 3rd party software for computer controll of this scanner in
production yet?

Any feedback appreciated.

Sent via Deja.com http://www.deja.com/
Before you buy.

To stabilize things, it would probably be a good idea to review the actual laws and regulations (there is a difference). The "FCC Fact Sheet" posted here is technically correct, but it's a bit disingenuous. The FCC carrys out communications laws. The ban on listening to cell and cordless is part of the criminal laws, the province of the Justice Department. The possesion and private sale of a cellular-capable scanner is not illegal. Its use, for other than monitoring banned communications, is likewise legal. The commercial modification of scanners to unblock cell frequencies has recently been construed as 'manufacture' and several of the more flagrant firms have been prosecuted. Private modification of one's own scanner appears to be a gray area - there has been no official notice taken.

The following is a re-post of a short disertation on the various laws and their effect.

The laws of the United States, passed by Congress, are codified as the United States Code (USC). It is divided into titles covering various subjects. Title 18 includes the criminal laws and penalties; Title 47 covers telecommunications. A law can be refered to by its original name (i.e. "The Communication Act of 1934") or its entry in the USC. A specific section would be refered to by title/USC/part/section, i.e. 47 USC 605.
To carry out the law, the various government agencies create regulations, which are codified as the Code of Federal Regulations (CFR). It is likewise divided into titles, with the FCC's rules in 47 CFR.

18 USC 119 bars the disclosure of any electronic communications to which you are not a party (with certain legal exceptions), and sets the penalties. 47 USC 605 (the Communications Act of 1934) also bans the disclosure or use of third-party communications. With minor changes, this has been the law for 60 years.

In 1986 Congress passed the Electronic Communications Privacy Act (the ECPA), which added definitions to the law that banned listening to cellular telephones. It also banned the monitoring of broadcast auxiliary, SCA and scrambled signals.

In 1992 Congress passed the Telephone Disclosure and Dispute Resolution Act (TDDRA), which instructed the FCC to ban the manufacture or import of scanners capable of receiving cellular. In accordance with this law, the FCC modified 47 CFR Parts 2 & 15, effective 26 April 1993. Note that this does not affect the sale of such scanners, so long as they were made or imported before the cutoff date. It also does not bar individuals from modifying their receivers.

On 25 Oct 94, the Digital Telephony act was signed. Buried in one of the additional sections was a change to 18 USC 2510 & 2511 that added cordless phones to the original ECPA ban on receiving cellular.

In short:
It is illegal to manufacture or import cellular-capable scanners.
It is illegal to listen to cellular (and cordless) transmissions.
It is illegal to divulge any communication to which you are not a party.

I fully realize that this has been kicked around a time or two,
but I did want to remind everyone that Bill's lung cancer, nor
it's associated bills, certainly won't go away by themselves.

Anything anyone could do in terms of send a few dollars
or whatever I'm sure would be greatly appreciated and most
certainly is greatly needed. The chemo treatments alone
are about $10,000 each time Bill receives them. These kinds
of financial liabilities certainly won't go away on their own.

The amunt of help and assistance he's provided the
scanner community in these past many years can probably
never be repaid. Including the excellent free advice that Bill
gave on almost a daily basis. He's been extraordinarily
generous to the scanner community. I'd like to believe
we can also be generous.

I'll be sending in a check within the next few days.

My wife and I keep Bill, Cindy and family in our daily prayers.

While I am disappointed in the style that Mr. Dorian used to express his thoughts, he certainly does bring up a very valid point. There are a significant number of people who in summary, to be frank, are not in total belief of this current issue for Bill. His sudden need for money due to health problems, very soon after being criminally charged in federal court does seem very coincidential to many, especially given his past history of shady actions or practices. Perhaps, if a independent & mutually trusted body could investigate this with the goal of establishing & proving the truth then this would help Bill & make others confident. Thus would result in contributers being more confident of the truth and others who are skeptical may lend support, both of which would result in benefit for Bill.

Some (but not all) of the questions the independent body should review would be as follows:

1. Is he indeed suffering from cancer?
2. Does he indeed NOT have any health insurance?
3. Does he qualify for any state insurance (medicaid or medicare) or could he soon?
4. Is the cancer indeed life threatening?
5. Is there any practical threatment for the cancer of which he is suffering?
6. Does he qualify for any VA benefits from any military service to assist with the needed treatments?
7. What procedures are set up so that those who donate to the medical cause are assured that their money is being used as directed & not shifted to assist in his legal defense on his current federal criminal charges? (Note - there should be a seperate accounting set up so people may contrubute to his legal defense if they desire. Thus - the two causes are not mixed)
8. If there are left over funds, what will those funds be used for?
9. Have arrangements been made so that the donations are tax deductable for those who desire such deducations?

10. What are the total estimated costs of the treatments?

There are probably other questions which should be pursued & added to the above list.

Radio Shaft stores start out with some minimal amount ($50?) in the
till. Most stores are hard pressed to get $300 in sales in a given
day, much less $300 in CASH sales.

Don't worry about the credit not posting on your credit card - it
posts just as quickly as the original charge did (unless, of course,
Radio Shaft personnel screw it up ;-)

That is correct. However, if you happen to overhear your neighbor's
cordless or cellular phone, you do violate Title 18 of the United States
Code (Sections 2510-2520), which is one of those "other Federal ...
statutes" the FCC Fact Sheet mentions above.

If you want to know current monitoring law in the United States, you can
read the web information at http://nf2g.com/scannist/usa_index.html
Click on the "Laws & Regs" link.

For Canadian monitoring law, try http://nf2g.com/scannist/canada_index.html
This also has the "Laws & Regs" link.

Hey :-)

Undocumented Features
Uniden 120-220xlt
Uniden SC150/SportCat Scanner

Hold down the following keys while turning the radio on
WX & L/O = shows battery voltage (1.72 while charging, 1.66 with full
battery, 1.45 needs recharging)
2, 9 & MAN = clears all memories
2, 9 & L/O = illumination diagnostic
2, 9 & PRI = puts test freqs in channels 1 - 21
2, 9 & SCAN = more test freqs

Have to back him up here. The rumors about Cassini perpetuated by the
public have blown way out of proportion. Read this:

http://www.jpl.nasa.gov/cassini/rtg/faqs.htm

To hear NASA's official take on it.

Of course, you could believe NASA is lying to you, which would be
perfectly reasonable. They did, after all, fake the moon landings.

Today I was listening to FBI ops in my area and heard all mobile units very well, but when they contacted "Control", which I guess is HQ, all I got was static. I'm guessing this was a scrambled com. Then I heard "Control" talking with a field op and as the transmission commenced, the "Control Operator" mentioned that they were "in the clear". I take it they have the ability to transmit either scrambled or unscrambled. Anyone else have any thoughts or like experiences? Marc

"Alex, I'll take 'scanners and interfaces for $1,000. Beeeep. What is 'This guy Walker doesn't know what he's talking about?'"

"Right you are Mambo Kid. Walker doesn't know what he's talking about. You now have the lead."

The OS535--Euro models and early US models--are capable of tuning cell phones even when installed in scanners like the PRO2035 and PRO2042 that are not capable of receiving cell freqs. Now, the current US versions of the interface do not receive cell freqs. Hence, he wishes to purchase a non-US or Euro model. Simple n'est pas?

It looks like at least the City of Macon and Bibb County have trunked
systems.
If you want to be able to follow police/sheriff and other city/county
services you
should seriously consider a trunking type scanners. From what I've seen you
might want to stay away from the PRO-92. While by many accounts it seems
a very good conventional scanner, I have not heard many good comments about
it's trunking capability. You should consider one of the Uniden scanners or
the
Radio Shack equivalents.

You should also take a look at Rich Wells site http://www.strongsignals.net/
.
Lots of good info there.

All it takes is the push of a button or flipping a switch to go from encrypted to clear transmissions. Usually, however, if you are using a given radio encrypted, you can't hear the in the clear transmissions and vice versa. In the clear does mean unencrypted. Many times federal agencies will operate in the clear on purpose for bait. Watch what you say and do with what you hear and never, never act on anything you might hear.

I do, better audio, larger display, than the 245xlt. Alpha tags are great, AA cell usage instead of a battery pack. Both radios have great features, unfortunately, the 92 doesn't trunk track very well, but it is a great conventional scanner.

>Just out of curiosity, does anyone actually like the PRO-92?
Gee, Dave -- I thought nobody would ever ask that question. Yep, even though the PRO-92 has MORE than its share of TrunkTracking faults and that RS is apparently going to take a 'corporate attitude' by ignoring any criticism about the unit...I still like the alpha tagging, the channel capacity, the PL decoding (have some FD channels that get obnoxious paging from distant FD's...and now it's gone because they have different PL tones). It is not a great trunktracker by any stretch...(I compare it to my BC235, BC895, and a PRO-2050)...but it has become my new "walkin' around" scanner for all the conventional channels in the area. That's where the alpha-tags are a blessing.

I would like to offer feedback about the PC interface but it is STILL conspicuously absent from my toy box.
I have to agree with the harsh stuff I've read from other users about the PRO-92's TT ability (or lack of) especially with Type-I Motorola systems. But they won't get mine...it's still a keeper.
Just my $.02 worth.

6511. Re: BC3500XLT? Worth the wait?

The US models are blocked because of US laws on the subject, but other posters
in the scanner groups have talked about the relative ease of obtaining
Winradios through Canadian outlets/sources which will ship to US addresses.

You can probably look up the posts in Deja News.

Someone might get a chuckle out of this...A week ago I went to the RadioShack in Belleville New Jersey. I was greeted at the door by a salesperson, a young girl all of 20 years old. I declined her over zealous offer of assistance since I basically knew what I was looking for. While comparing prices and design specifics and determining what I needed to accomplish my task, I was asked two more times by the same woman if I needed help. After again declining her offer, she gave me a loud "What-ever! Like I'm just trying to help, yo. You aint gotta be gettin' that way wif me, yo." (Up to this point I had been nice). I figured what the hell, it's playtime now. I told the girl that I had reconsidered and realized I did need her help. I told her what I was trying to do, what I thought I might need, and asked her to set me straight on how to accomplish my task. Her response: "Well, I don't know what to tell you, like, uh, I don't know nothin' about this stuff over here. Like, uh, I wasn't trained in this area." She tilted her head like the RCA dog and gave a confused look when I asked her "If you know nothing about this stuff over here, why were you so damned persistant about trying to help me? I am over here. You admit to knowing nothing. How were you going to help me?"

Ni-MH batterys are Very suceptable to Heat Damage. The best bet is to ONLY use a Charger specificly designed for Ni-MH batteries.
I don't know of any home buildable Kits like htere are fro the Ni-Cad's though. They are thouhg particualrly popular in the Ham Community and there are Several "AA" cell chargers avaialble and Universal "Pack Chargers. One supplier I can recomend is "MAHA". Their Web address is www.maha-comm.com. They sell both a very nice 4 slot "AA" charger Quick Charger(Model MH-C124S) and the Standard 4 "AA" charger (Model-C204F)but also and Almost Universal Charger Conditioner(Model MH-C777)
At most Ham Radio Stores the Quick Charging MH-C204F sells for $24.95
The Standard Charging MH-124S sells fro $9.95(IMHO more then adequate fro all but the Very Heavy duty user) and
The MH-C777 Universal Hand Held(Scanner/Ham Radio) goes for $49.95.
It is though designed for Contact type of Battery packs and not the Plug in kind like comes with the 245/Pro-90 Trunk Trackers.

I've been visiting the Sioux City, Iowa airport, home of the 185th Fighter Wing, and I'm looking for the milair freqs they might use.

I am also looking for frequencies for Sioux City and the outlying areas - would also like to meet with scanner nuts like myself in and around SC (I also get to Omaha often)

That reminds me! How about Offutt, down in Omaha? I'd love to find some milair freqs for Offutt, too.

THANK you in advance - and happiness for these holidays!

Having been in the private mobile radio business over
30 years I can assure you that this is not an uncommon problem.

As said elsewhere grounding the hood (or bonnet as
we say in the UK) is always a good start, preferably
direct to the battery -ve, assuming -ve ground.
Many modern vehicles have bolt on - we call them wings,
I don't know what you call them - and the sealant used
to cushion the joint forms a pretty good insulator:
the metalwork of the wing can thus radiate. Ground
this also, albeit discretely.

Also check where the ground connection is to the
engine: GM (Vauxhall over here) were always a

problem as they grounded the battery close to its tray, but the engine ground was a braid strap from chassis to block, often on the opposite side of the vehicle. If the braid gets damaged or loose not only will you get terrible RFI but you may also have starting difficulty.

The other problem is using a magmount. As the braid (outer) of the co-ax is not grounded at the antenna position, if there is any earth differential between the chassis at that point and the co-ax ground, then the chassis will radiate interference related to the current flowing through it. Remember that a 21W stop bulb drawing about 1.5A through a resistance of only 0.01 ohms will cause a voltage drop of 15mV, and even allowing for losses that still represents a *huge* signal to your radio.

Other ideas: if you do not already have them, fit resistored spark plugs - they usually have an R on the end of the number. A resistor in series with the inductance of the HT cable forms a damped circuit and will slow the leading edge of the spark, it being the leading edge of the rise of any waveform that generates the high number of harmonics that extend into the broadcast band.

I started with the ill fated Pro-92, and that didn't last long at all. It was a *great* conventional scanner, but my only trunker was the 235XLT, and I wanted multiple trunking capability. I turned the 92 in and got a 94. This radio is nice, but is easily overloaded with intermod, and is not quite as sensitive as my 235. As others have said, it will not do trunking and conventional at the same time... but it will do *all* trunking OR conventional (Moto AND Edacs). I put all my conventional freqs on the A side, and trunking systems on the B side, and was very happy with the arrangement. The 235 is the first of my many scanners that taught me that I do not have to tolerate intermod (and mine is the early version before the ATT switch), so the 94 will be going back for a 245. I'm looking forward to the computer control AND expanded trunked ID banks!

Hi

To each his own..

In the Netherlands these regulations are simpler. If you don' want to be
listened to, make sure they cannot receive/understand what you are
saying.

We don't have "frequency blocked" scanners and we can listen to anything
that's in the air-waves, however you cannot publish it. The police/Army
etc crypt their most important conversations. No, no speach inversion,

that would be too simple.

Our cel-freqs (GSM) can not be listened to because it is digital and I imaginge that you guys are using the same on the other side of the big pond.

It leaves me with a simple question: what the hell is it of your business to know what other people are saying over their celphone, an at the same time you are talking about freedom and violation of your rights: bull.

It is my opinion that YOU are violating their rights when you try to listen to their cel/conversation. It is none of your cotton p business.

Bye from the (beautifull) Netherlands.

73 73

Joost Dirven

A merry Xmass and a Happy New year to y'all.

Hey Henry,

Here's another one from the Netherlands and from who proudly knows/works with some of you military people.

Love it or leave it and don't even use Stalin's name in a country that has given and protected the FREEDOM of many nations in this world mine included.

You president was elected in a democratic way.. The fact that you can say these tings openly without being affraid oa the CIA of FBI arresting you should say a lot.

In the country where you mr Stalin once ruled, you would not even have come close to a keyboard, you already would have been shot.

I'm not a flag waving person at all but I'm sick an tired of hearing your bull about your own country; you should be proud of it, even if you don't like your president.Or is it because you social security check has not arrived yet?

Bye Americans and America we love you, we are proud of you and greatfull.

Joost Dirven

Not in my area, they don't. First, the traffic plane (in our case) is not monitoring the scanner. The assignment editor back in the control center is doing that. The local airborne traffic service is independent and has contracts with local stations. That person has the plane crew check reported incidents on major commuter routes. If traffic is backed up, they report THAT. Since they are onsite observing the traffic jam, there is no issue with broadcasting information gained over the scanner. Supplementary information, such as how long before the police expect to reopen the highway, is obtained by telephone call to the dispatch center (that information is almost never given out over the primary channels, anyway - the police already know what's going on).

> Of course, nothing happened to the Democratic Congressman who accepted the
> tape and withheld the information from the authorities.

Wrong again. He was sued by Newt Gingrich's office (ECPA allows for both civil and criminal sanctions and does not actually require that both be imposed).

What "authorities" are you talking about? The intercepted information had to do with a conspiracy to violate a congressional order. That was reported to the appropriate committee. And how do you think the Department of Justice found out where the recordings came from?

There are no scanners currently available that will track MultiNet. The
PRO-92 tracks LTR.

I use mine to trunktrack a GE/Ericsson EDACS system and it works just fine. The closest system to me is a 400 MHz system about 20 miles to the south. Clearwater is a but further away (I'm in Boulder, Colorado ;-).

I like mine. I *really* like the CTCSS decode & lock-out capability. CTCSS decode is fast and seems to be very accurate. It'll show the code even when the voice is barely legible.

It tracks GE/Ericcson pretty well and I haven't scanned enough Motorola systems to confirm or deny what others have said about it. Alpha tags are nice when out of my home area -- or even when I'm in it ;-).

Does seem to go through batteries, but maybe my NiCd's are getting old. I like the fact that I can interchange the battery pack with my Pro-39's.

Source record: 99437

Hello all,

Was wondering if anyone had any information on 800 and 900 MHz trunked systems, particularly the Commercial systems, here in the valley??

A while back, a few people pointed me to some of the trunktracker sites on the web. They are good, however focus primarily on public safety stuff that I already have information on.

If anyone has any information on the commercial systems, frequencies, and fleetmaps that would work with my BC-245, it would be VERY much appreciated.

***Please be sure to reply to my email address directly, as I don't view this group too often. E-Mail: GreyFox001@aol.com

Thanks in advance and Happy Holidays!!

Paul

This is how things used to be in the US also, as per the FCC act of
193x. But since liberals don't to force anybody to be careful or
actually LEARN how to use a new tool, they limit everybody else's
freedom.

Another question... how do you determine the appropriate charging voltage?
I have a friend who needs to charge a 12V "gel pack" sealed battery, but has
absolutely no idea how long to charge it and at what voltage. I believe the
battery is something like 7 amp hours???

So, there was no criminal prosecution, it took a civil court to get ANY justice at all, and that must not have been much, since, even in the Northwest, we never heard anything about it in the news. Just what WAS his "punishment?"

> What "authorities" are you talking about? The intercepted information had

Since nothing ever came of obvious criminal activity, I must conclude that it was not reported to the "appropriate" committee.

I'd still like to know what the EXACT punishment was for both the Congressman and the two retirees. Do you have that info, or do you know where I can find it?

Sorry to learn you returned the PRO-92, an excellent scanner.

You wrote that there's no trunking near you and you probably
wouldn't take a scanner out of your home.

Therefore, it would make little sense to buy
a portable BC245XLT -- a scanner which is less
capable than the PRO-92 for the type of scanning in your area and uses
a proprietary battery pack.

Sounds like a Uniden/Bearcat BC895XLT would suit your needs.
It is a base model with built-in CTCSS decoding squelch.
With a street price near $200, you'll have money left over
to spend on an outdoor antenna, coax, scanner magazines, scanner
software,
accessories, etc.

Happy monitoring!

Just to play devil's advocate for a second, also take into account any possibility of your locality moving to a trunked system in the near future. The Pro-92 in convential mode might work great for you right now, but if you end up buying yet another radio to handle the trunking in a year or two then perhaps you'd be better off saving your money and just getting that BC245XLT instead. (Especially considering that you could almost buy both the BC245 plus a less-sophisticated or used conventional scanner for about the same price as the Pro-92 alone.) As the gentleman above said, It all depends on what you need.

For the record I happen to _like_ Radio Shack. I own four Radio Shack scanners, including a Pro-90 which I bought in preference to the BC235XLT when they first came out. My first non-RS scanner was, in fact, my new BC245XLT, and I would have bought a Pro-92 instead if not for the sincere warnings that I read from people that I trust. You do have to be careful

sometimes, but I really don't think all of them are on some anti-RS vendetta this time. ;-)

What improvement if any, would I get using 2 loaded coil telescoping whip antennas (RS models) attached to a T BNC connector. To be used on a ICOM PCR100 attached directly to the back. Would this improve indoor reception dramatically. Would having one whip extended to the maximum, the other to minimum improve reception at both ends of the antenna frequency ranges. Simply put I suppose it would be a dipole antenna, but is it worth the trouble.

Ideas?

Most fed agencies are able to go encrypted. The static noice you heard
is DES encryption. If the receiving unit has the proper code it will
receive the audio encrypted or in the clear. If you have used a
digital phone you most likely have noticed that the audio gets hard to
understand sometime. The feds radios suffer as well. You'll hear them
in the clear for two reasons usually, the guy punched the wrong button
or it will not work well in encrypted mode. If your scanner will do
CTCSS decode you can tone squelch it so you'll only hear the clear
transmissions. FBI is 167.9 Hz usually.

Sorry to dispute you but the OS535 can be "unlocked" to receive the blocked frequencies. IT assumes control of the 2035/2042 receivers so it has the ability to restore full frequency coverage. Older pre-cell ban 535's will have this feature.

It is not a dipole antenna as both whips are conected to the center conductor. The only way this would be an improvement is for very short antennas at HF (say a loaded 6' whip for 40M) where the 2 antennas will provide a measurable increase in radiation resistance.

Bill

I have both and, despite the better spec of the 9000, I simply prefer the 7100.

In back-to-back tests on aviation band (with the same antennas) the 7100 consistently pulled in signals that the 9000 failed to 'catch'. I know that it's pretty unscientific - but that is my experience.

I prefer the sound quality of the 7100 too. My 9000 is up for sale, but I'm keeping the 7100. It's going off to Jonathan at Javiation for his two mods shortly.

Good luck

Robby

>

LA CITY fire uses MDC4800. I've monitored comm's on 506.3125, 507.1375,
and a couple others.. search the 506-508 band on your scanner and
you'll hit them.

Nothing fancy like GPS maps or anything. Most messages will look like
this:

ONS127ONS127ONS127ONS127ONS127ONS127ONS127ONS127

Meaning 127 is on scene. I'm not sure why they repeat the same message
over and over again, but they do.

A typical call looks something like this (bear with me, I'm doing this
from memory)

1800 1ST ST X WILSHIRE
STRUCTURE 1ST STREET BANK
SMOKE SEEN COMING FROM ROOF
TAC-12

plus info like what engines, time of the 911 call, etc.

It's cool to watch the info on the screen as the dispatcher is calling
it out.. plus if you miss an address, you can pull it up from the
messages recieved.

I recently took a tour of LA city communications, and learned that LA
city fire is upgrading this system to the new RD-LAP 19.2 bps datatac
network that is currently being used by LAPD. I was told they will also
soon be transmitting live video of incidents back to the EOC, to be
displayed on 4 large wall sized monitors. Did anyone see the movie
where a volcano erupts in west LA? Their mock up of the EOC was damn
close to what I saw. No kidding. I thought that was all movie nonsense,
but a good portion of what you see there is really in use. It was truly
fascinating.

But anyhow, these frequencies should be good ones to monitor until they
make the switch. As for LA county, I'd love to know just what kind of

equipment they use! It sounds almost like ordinary packet radio...that can't be... or can it? Might be worth a try with some of the packet decoder prog's out there...

Why? Why do you so suddenly care about "what's his name in San Diego"
as you so often refer to Bill? I can believe the government treating
Bill like a piece of toilet tissue. They do it to us, why not our
honored vets? How many homeless nam vets are there out there, huh? Wake
the hell up!

> Some (but not all) of the questions the independent body should
review would

> be as follows:
>
> 1. Is he indeed suffering from cancer?
No, he's making it up... good God in heaven...

> 2. Does he indeed NOT have any health insurance?
Do you ever READ anything you reply to?

> 3. Does he qualify for any state insurance (medicaid or medicare) or
could
> he soon?
No. He made too much money last year. (as would even any fast food
worker in California. The system sucks. Unless you're an unwed mother
with 6 kids and no job you can't expect much from the state.)

> 4. Is the cancer indeed life threatening?
What cancer isn't? All cancers can spread and kill you. Lung cancer
ain't something to dismiss, especially advanced lung cancer, which is
what he has. Or "supposedly has" in some people's myopic view.

> 5. Is there any practical threatment for the cancer of which he is
> suffering?
Yes. Expensive radical chemotherapy. Lots of it. there's a good chance
the practical treatment you refer to could kill him faster than the
cancer itself. Any more questions?

> 6. Does he qualify for any VA benefits from any military service to
assist
> with the needed treatments?
Probably, but they don't just automatically kick in, John. You have to
go thru miles of red tape to even apply. You should know, don't you
work for the state? You know full well what it takes to get any
government assistance these days.

> 7. What procedures are set up so that those who donate to the medical
cause

> contrubute to his legal defense if they desire. Thus - the two
causes are
> not mixed)

What difference does it make John? When you give a homeless guy a
quarter or a dollar how do you know what he spends it on? YOU DON'T!
When you send money to the Salvation Army, do you expect a detailed
report of what it's spent on? Come on!

> 8. If there are left over funds, what will those funds be used for?
What's to figure out here. Terminal lung cancer means any left over funds will go to his burial. They aren't free you know. Should he survive, he'll need to survive as he recovers. You can't just bounce back from radical chemotherapy sessions overnight. It takes up to a year to fully rehabilitate.

> 9. Have arrangements been made so that the donations are tax deductable for
> those who
> desire such deducations?

It's in a trust fund isn't it? That usually denotes that the proper steps have been taken by the bank.

> 10. What are the total estimated costs of the treatments?
Most insurance plans cap out at a million bucks. I've heard many cases where the treatment was just barely starting to do any good by then.

>
> There are probably other questions which should be pursued & added to the
> above list.

Yeah, like how low will John Mackey stoop to get a response in usenet? Jesus. Can't you just let it go? How down and out does Bill Cheek have to be before you show some class and back off?

Something Einstein forgot to think about in his list of questions is sure, VA and other sources can help pay for cancer treatment and other such things, but they only pay a portion of it. You're supposed to have your own medical insurance, they claim they can't help it if you can't afford it. And they pay nothing towards living expenses while you are out of work. If you're lucky, your company might let you retire. But Bill was self employed, so he gets squat.

Ask me how I know: A family member of mine had a heart attack that forced him to quit his job. Despite his multiple tours in Vietnam, unblemished service record and top secret government clearance, the VA hasn't paid him a penny. Social Security denied disability for him twice, despite his paying into the system for the past 30 friggin years. He's worked at the same job for 18 years and that was the only thing that saved his ass. Even still, his retirement barely covers the bills. Which leaves his wife to go work so they can eat. We try to help out when we can, but it isn't the same as having a full time 60K a year job + benefits. Merry Christmas...

John, just let it go. All you are doing is attracting the wrong type of attention to yourself, which seems to be your special talent in life.

Here's a novel idea. If you think Cheek helped this hobby and would like to help him out in his time of need then by all means do so. If you think he was/is scanning's version of pure evil then keep your wallet/checkbook closed.

Considering time of year, maybe we could forget whatever difference of opinion we have about the man and not chastise those who are trying to help him.

I hope you guys can sort out the cordless phones from mobile one.
The diffrence is important, a cordless is extremly easy to listen to
since most models doesn't use any encryption today. The phones rely
mostly on low-effect transmitters for security, that is; since the
signal is hard to detect far away you can't do much hamn anyway.
If you already are being suspect to an investigation of some sort,
then you have a problem. Usually the only thing one has to do; is
getting a similar cordless phone and listen through it's handset
or in some cases a scanner and a spec on the phone (for the tx/rx
freqs).

Mobile phones use higher effects on their transmitters and sigint
systems can (and does) scan this type of traffic in general.
When interesting signals is found these signals can be treated
by some special surveillance program, this way you can actually
use the sigint-system to detect malicous activity etc.

I have been hearing rumors that Uniden is about ready
to release a replacement for the BC-245. This is why
the price has dropped so much in the last few months.

Anyone else heard anything?
Or of other new scanners that
will track trunked systems or
digital trunked systems?

Hmm, my Yupi 9000 does really well across most of the spectrum... but for some reason from about 130-160 Mhz it is a bit less sensitive. I KNOW the 7100 won't beat it below 30Mhz.

I've got a Radio Shack Pro-2006 scanner in good condition (only thing wrong is that its missing the left-hand "stand up foot", but this doesent affect functionality). All popular modifications have been applied, and it works great - I just need to raise some cash.

$250 cash/check/MO/etc. I'm in Austin, Texas.

I've also got a Pro-2030 (non-modifyable) that has only seen about 2-3 days worth of use; I've still got all the original packing materials and box, etc. This was "new in box" until I opened it a couple of weeks ago, and have hardly used it since. $100.

Bill

6584. Returned Pro-92 creates dilemma

Newsgroup: rec.radio.scanner
Date: 1999-12-21 00:00:00 UTC
From: Chromed Invader <ChromedInvader@redoakhomes.com>
Message-ID: <oxT74.177$Za6.31963@typhoon3.rdc-detw.rr.com>
Source record: 99278

Newbie here.
I have always wanted a scanner and finally purchased one just less than one month ago. After some research, I went and picked up a Pro-92.
Not being a techie, I found the Pro-92 pretty easy to operate, and I really enjoyed listening to it. I don't have trunked systems in my area (as far as I know) but I bought the scanner with the thought that I would be prepared if communications around here went in that direction.
After more reading, the general consensus seems to be that the BC245XLT is a more desirable scanner - for a lot less money. I can afford the Pro-92, but a always felt guilty about how much I spent for it. (Never did tell my wife how much I spent!).
Today I returned the Pro-92 with the intention of picking up a 245. Back to the computer for shopping, and then I started to think. I only use this scanner at home, and I really can't see a time when I would take it with me. For the same amount of money I am planning to spend, would a base model give me better performance?
Hence my dilemma. I can see myself with a base model, which could perhaps give me better performance (bigger speakers, displays, etc) than a handheld. But I like the handhelds because they run on batteries, and I would like to be able to scan when the power goes out. Then there is the possibility of buying a small boat battery on hand to power the scanner in those circumstances, but I don't know how long they keep their charge and how disciplined I would be to trickle-charge it regularly.
Anyhow, the BC895 has caught my eye, as have a couple of radio shack base models.
Do any of you have any thoughts on this that you would kindly share? Perhaps there are issues I am not taking into account, or things I have overlooked.

Thanks in advance for all or any advice.

Tom

Source record: 99281

I want to buy a good overall scanner. I live in Canada. Somebody told me the Pro-26 would be a good choice, if I could find one... Actually, I found a few used ones at around 180 $ (CAN). Would that be a good choice? I want to spend 200 $ (250 $ US) at the most for a used or new scanner. What would be the best choice for that price? Thanks in advance!

I prefer handhelds because you can take them with you every where (even to bed) and you get more use out of them.

My main scanner now is a BC245 XLT which if I want more audio I hook up to amplified speakers.
Often I use it with earphones.
It easily hooks up to the PC (cable included) and there is some great Canadian FREEWARE for it that runs under both Windows 98 and Windows 2000.

You shouldn't let the opinions of people on the Internet overrule your own personal decision about what scanner is right for you. If you picked the PRO-92 after researching the issue, and you were satisfied with its performance, that should be enough.

There are a lot of people online, many of whom post extensively to this newsgroup, who seem to have a vested interest in driving Radio Shack out of business. If you are happy with your Radio Shack purchase - or a purchase from any other dealer (I got my PRO-92s from Grove) - then that should be all that matters.

The BC895-XLT would be a good choice, as would the BC245-XLT. I couldn't make up my mind, so I bought both... which you can do for about what you paid for the PRO-92 alone!

I think that's nothing but a rumor. Uniden most likely dropped the price of the BC245-XLT, on the heels of Radio Shack release their new GRE, PRO-92 scanner.

Guy,

Depends on what you want to listen to. I use my PRO-26 when I need a wide band scanner like at airshows to get military aircraft. It was my primary scanner until the trunk capable scanners came out. Now for normal everyday use
I mostly stick with the BC245XLT to listen to trunked systems. Most of the public service in the area is trunked. It also makes a very decent conventional
scanner. You can get the 245 for around $200.00 US. If you don't have any trunked systems in the area, the PRO-26 is probably a good deal if it's in good
shape. I believe I paid around $350.00 US for it new.

That is my opinion, others may vary.

I agree wholeheartedly with Dave. While the PRO-92 had serious (even fatal) deficiencies as a trunk tracking scanner, it was superb as a a general purpose unit. The PL features, alpha tags and all around performance endeared it to me. I did return mine because I couldn't justify another unit with features that duplicated (though it did many of them better than some of my other handhelds) but that didn't handle trunk tracking satisfactorily. There is a real cadre of folks who are gleeful of Radio Shack's failures and do all they can to poison the well. You'll sooner or later be able to identify them by the extreme rhetoric and constant drum beat of negativity. Were I you, I'd seriously reconsider the decision to return the PRO-92. While it is a very expensive general use handheld, it does those functions very well indeed. Bottom line is for you to decide what fits your needs, budget (and conscience). Those who want to make another person's minds up for them probably can't find enough of their own to make it a worthwhile exercise.

A safer neighborhood? What neighborhood do you move to with no crime
rate? In an era where supposedly "good kids" with no history of
problems, who come from a stable middle class neighborhood, plot and
execute school assaults, a safe neighborhood is a relative (and
fleeting?) thing.

Source record: 99364

I've been visiting the Sioux City, Iowa airport, home of the 185th Fighter Wing, and I'm looking for the milair freqs they might use.

I am also looking for frequencies for Sioux City and the outlying areas - would also like to meet with scanner nuts like myself in and around SC (I also get to Omaha often)

That reminds me! How about Offutt, down in Omaha? I'd love to find some milair freqs for Offutt, too.

THANK you in advance - and happiness for these holidays!

6605. Help..not programed

Newsgroup: rec.radio.scanner
Date: 1999-12-21 00:00:00 UTC
From: bossman@dol.net
Message-ID: <3861d50b.178983621@news.dol.net>
Source record: 99369

During past two weeks, I have been able to receive phone calls over my scanner (Radio Shack Pro- 91) from two different phones (I think) I do not have any phone frequencies programmed into scanner. Please note: I do know how to program the scanner to do this so I do know that I have not, by accident, etc., programed cordless phone freqs into scanner.
I have had this scanner for appox 6 months and this started to occur about two weeks ago. When the scanner receives the phone call, it takes over all freqs...scanner can not received any other calls (fire, etc.) and I am able to hear very clearly both sides of conversations.

I check with neighbors and no one has brought a new phone (.but some do have an older cordless phone, 800mh?). And all of them said that they have noticed being able to overhear other conversations during the past few days.

I called the phone company and they said it sounds more like a FCC problem.

If I wanted to overhear what my neighbors are going to do or what they have done, that's one thing, but I do not.

Any suggestions on what to do (giving up scanner not an option) would be helpful.

Thank you

bossman(NOT)@dol.net

Stephen -

I have lived most my life in beatiful SIOUX CITY!!!! (I'm from the
Morningside area)

I have never listened much to the 185th Air Guard so I am not up on thier
current freqs.

You mention you are also looking for Sioux City freqs & the outlying areas.
Sioux City
itself moved pretty much everything they have to an 800 Mhz trunked system
(GE)
about 3 years ago. However, Woodbury County, So. Sioux, & N. Sioux are
still on
VHF.

Perhaps if you have a meeting of scanner people in the Sioux City area
I might be able to attend with advance notice. (My work keeps me out of
town very frequently)

Clear voice comms come in fine for units set to transmit in the
'Private' mode,
by design.

Hi all,

HAMNET-KZN is South Africa's elite emergency communications website. On it you will find up-to-date bulletins, live streaming data, photo's and much much more. Also just recently Bradford Designs (HAMNET-KZN website sponsor) added an online chat room for visitors as people from all over the world access it regularly. HAMNET-KZN work closely with government agencies for back-up communications and are also standing-by for the Y2K situation. This website has also won afew awards for it's great content, navigation & service to the country and the world. Come visit the site now and don't forget to take a look at the chat room.

Plus there is much more to scanning than monitoring the police. I would
buy a scanner first, and see how you like the art of scanning before
coming to a final conclusion.

There are now many models with the 220-225MHz frequencies, programmable modes and step sizes although if you are after the MX-5000 for specific reasons the AOR AR2001 is the same receiver in the same "package" so that might be worth keeping an eye open for.

The MX-7000 was also in the same "package" with the membrane keypad but had 800-1300MHz coverage also.

>I have a friend who needs to charge a 12V "gel pack" sealed battery, but has
>absolutely no idea how long to charge it and at what voltage. I believe the
>battery is something like 7 amp hours???

For NiCd and NiMH, the charging voltage doesn't matter - set and measure
current and the voltage will take care of itself.

For gel cells and other lead-acid batteries, it's mostly the other way
around: control the voltage and the current will take care of itself.

If you want to charge a 12 V gel cell as fast as safely possible, use
a bench power supply set to about 14.4 V and a current limit set to
about 25% of the rated capacity - 1.75 A in the case of a 7 Ah battery.
A discharged battery will current limit the supply at first, with the
voltage rising as the current remains at the limit. After a while,
the voltage reaches 14.4 V and stays there (the supply is now in constant-
voltage mode) as the current drops. Within 24 hours, the current will
be very low (milliamps) and you can disconnect the supply. In fact,
you must disconnect the supply, because charging continuously at this
voltage will eventually cause electrolysis that will dry out the
battery.

On the other hand, if you just want to charge the battery with a "float"
supply that can safely remain connected forever, set the voltage to
13.6-13.8 V. It will take significantly longer to recharge the battery
at this setting, and it will never quite reach its maximum capacity,
but the charger can be left connected for years. There is also less
need for a current limit during charge, since the peak current will
be lower at this lower voltage.

(The "25% of capacity current limit mentioned above is a conservative
value. Some battery manufacturers specify 40% instead - but check the
data sheet before going above 25%).

You can also get "smart chargers" for lead-acid batteries that charge
in multiple phases. Typically, they start out current-limited as
the voltage rises, then constant-voltage as the current drops, and
then when the current has dropped low enough, the charge voltage is
reduced to a safe "float" charge level. These chargers give the fastest
safe charge and at the same time are safe if left connected.

Correct. Not a lot of difference but it is noticeable in spots.
But, the 9000 is also much more resistant to overload than the
7100. And the new 9000 Mk II is another notch up...a bit less
sensitive than the 9000 but much more immune to strong signal
overload. The Mk II also has much less internally generated
noise as well.

Happy holidays to all!

Chromed Invader wrote:
> After more reading, the general consensus seems to be that the
> BC245XLT is a more desirable scanner - for a lot less money.

For most people, probably. Not necessarily if you use it just for conventional scanning (no trunked scanning). The biggest drawbacks of the 245 to me are the use of a proprietary NiCd battery pack (I prefer the choice of alkalines, NiCd or NiMH cells allowing me to select which one depending on how and where I will be using the radio) and the 5 second Multi-Track delay (which Uniden is rumored to be tweaking for early next year).

> I can afford the Pro-92, but a always felt guilty about how much I
> spent for it.

So how would you feel if you bought a $600 MVT-9000, or $1500 IC-R8500? ;-)

> I only use this scanner at home, and I really can't see a time when
> I would take it with me.

I can think of many times! But if you never use a scanner as a portable, it will be one of those things you simply never become "enlightened" about. Sort of like having computer control option on a scanner but never using...you'll just never know what you're missing if you don't dive in and give it a whirl!

> For the same amount of money I am planning to spend, would a base
> model give me better performance?

It all depends on the particular model. Some handhelds outperform some base models, and vice versa. You have to read up on the models you are considering and how they will be used.

Do you live in an area where you'll need lots of sensitivity (if you live far away from transmitters) or lots of good interference filtering (for those that live in and around cities where strong signals can turn a scanner into a useless pile of electronics due to overload).

> Hence my dilemma. I can see myself with a base model, which could
> perhaps give me better performance (bigger speakers, displays, etc)

I wouldn't consider that better "performance"...better ergonomics, yes. A base will usually have larger keys which are more spread our, and an easier to read display. Almost any scanner can be

attached to an external speaker allowing it to project better
audio than the stock speaker. You can also get an amplified
unit which boosts overall power output.

Many of us run the audio output into our PCs allowing us to
boost the output power, have better fidelity, and record
audio into WAV files on the hard disk, if desired.

> But I like the handhelds because they run on batteries, and I would
> like to be able to scan when the power goes out.

An excellent option. Handhelds allows for use at home as a base
unit (hook them up to an external speaker and an external antenna
if they can handle it). They can be taken in the car (if that's
legal where you are). They can be carried around when walking,
camping, travelling in general, going to an air show, etc.

> Then there is the possibility of buying a small boat battery on
< hand to power the scanner in those circumstances, but I don't
> know how long they keep their charge and how disciplined I would
> be to trickle-charge it regularly.

Yes, that is an option, to use some form of gel-cell or sealed
lead acid battery (marine or motorcycle usually). You'll need
a dedicated charger to maintain peak voltage with a trickle
charger as you mentioned.

> Anyhow, the BC895 has caught my eye, as have a couple of radio shack
> base models.

Of these, the BC895 is probably the best fit for you for conventional
scanning. Has a lot of features, great performance, and computer
control.

Stop by my Picking A Scanner/Receiver page for some help with all
the options you should consider and take into account:

http://www.strongsignals.net/htm/pickrecv.htm

You should also have a look at all the models which are on the
current market:

http://www.strongsignals.net/htm/manufact.htm

as well as what I consider to be the "hottest" sellers:

http://www.strongsignals.net/htm/hottest.htm

Best of luck with your decision, and happy holidays!

If the scanner is, in fact, a BC235 as indicated in the header, the key symbol indicates that the keyboard is locked. You accidently pressed the "Lock" key (lower left corner of the keyboard). To release it, press & hold "Lock" until the key symbol turns off (see page 16 of the manual).
The "Lockout" function is enabled by the "L/O" key and is denoted by a "l/o" on the display.

Just so happens I know a partial answer to your question.

My brother-in-law is a deputy sheriff for Marshall Co. The entire staff
is
on duty over new year's. So is Tracy's friend who is an ambulance
driver.
The deputy also said that all 911 operators are also on duty. Those
three
would be a pretty good source. In big, metropolitan areas, I doubt the
scenario is much different. I am still trying to find the Civil Defense
frequencies (can't seem to locate them) - they might be on call as well.

Probably only the much larger cities would have an actual "specialized
force"
to take such calls. At least in Marshall Co, it is the local law
enforcement
and emergency personnel.

If your computer croaks, you might have to call Bill Gates on that one.
:)

Hi all, just wondering what everyone is using to program the bc245xlt...which software is the best to use..any if any in the new york city area if they could send what they have on any freqs..what so ever...these programs must make some kind of a text file or something like that .if you can just send that would be greatly appericated..

Thanks

Bill

Source record: 99108

You thought right - they don't. The only way it could receive cell calls is if it had a converter that allowed you to receive the 800 MHz band down in the 400 MHz band. By the way, if by chance the person offering you that scanner is selling it with a converter like that - TAKE IT. There would be NO blockage of cell freqs. I'm not even sure if anyone manufactures 800->400 MHz converters anymore.

My '7100 is probably 6 or so years old. It's missing a screw and the case is cracked around the battery area. In addition the battery connnector broke off. All fixed with duct tape and a paper clip. Bought mine from Canada and imported it to the USA. It has at least 3000 hours on it and well over 100,000 travel miles (foot, bicycle, horse, car, 4x4, canoe, boat, and various airplanes). I use my trunktracker for the locals which are trunked but my Yupi I prefer. Especially great for hiking since it picks up everything.

Best investment in a scanner I've ever made. Just wish I had a new case and screws to fix it up.

Make sure to buy the plastic cover. I had one from Yupi for a couple years but lost it somewhere in the Rocky Mountains (or maybe Europe?). The case does pretty scratch easy. I am pretty rough with my toys and it's withstood just about every form of abuse.

I have the following for sale.

Icom Modded IC-Q7A micro Dual Band HH amateur Radio with extended RX/TX.
RX from 30-1300MHz (lower with programming) and tx from 130-174 and
400-470MHz. Great little radio comes with box, batteries, sma to BNC
adapter, external mag mount mini antenna and 4' cord. Sell $175

2- Sony C-Mount CCTV Lenses for ccd cameras
12.5-75mm zoom with manual aperture. 1 with Lens cap included. Both
have sun shield
$125/each

1- CANON C-Mount CCTV Lenses for ccd cameras
12.5-75mm zoom with manual aperture. Both units have sun shields
$125

Advanced Modular Solutions Model # MS/16+ Portable 486dx50 computer.
Runs on 12VDC adapter (included), standard
PS2 keyboard and mouse. Runs a standard SVGA monitor also has 16MB
memory, Built in TCP/IP module via RG
connector on back. 1.2GB HD, very small unit, a bit bigger than
cigarette carton. O/S loaded are os/2 and W95...Great buy
for portable computer. 2 DB9 com ports and 1 DB25 port. No floppy.
Photo upon request
$200

Mobilcomm - Voice Organizer Pager. Model 9601 Voice recognition pager
stores numbers and appointments and IS A
PAGER ALSO ! Recognizes your voice to pull up telephone numbers or
dates. Runs on 3 AAA batteries, complete
instructions included. Paid well over $200 for it orig. Sell for $75

Misc

100+ pieces LM317t Positive adjustable voltage regulators, TO220 size,
NEW and unused make offers

Vicor VI-J52-IZ
DC-DC converter 150VDC input (@35W) output 15VDC @25 W

TV amps gain rolloff rapidly below 54 MHz. Most also have holes between
CH6 and CH7- wiping out all of VHF HI band.

Define Private Mode? If the unit is set up with DES it will not receive carrier or pl squelch transmissions and vice versa, unless you manually change it to operate in that mode and then it gives you a warning tone to remind you that you are no longer in secure mode.

As to part two, there are multiple opinions about everything.

As the other respondent stated, if conditions become marginal, an encrypted signal may loose its stability, making comms impossible, in which case you would change to carrier squelch operation.

Kurt

And then you sit this post right next to this one:

John (Looney Boy) Mackey also posted that same day:

>>Subject: Re: Monetary Help for Bill Cheek

>On Tue, 21 Dec 1999 <clint@clintbradford.com> wrote:
>>Bill Cheek has done more to make our hobby of scanning more enjoyable
>>than other individual on the planet.

>In your opinion.
>I believe he has done more harm to the hobby with his arrogant assholeish
>attitude. He is a self serving jerk IMHO.

To new readers, John might confuse you, but a little background on this internet cockroach might help:

He has an obsession with Bill Cheek that some have characterized as the result of some sort of psychological damage Mackey received from either lack of attention from a father figure, or denied sexual advances or a combination of both. Mackey's mission in life is to post as much derogatory material about Bill Cheek as he can on this or any other forum. The fact that Bill hasn't participated in this forum since '98 has not stopped looney boy from carrying on and on about his delusions regarding Mr. Cheek.

He's mentally defective and I say that without intent to hurt or insult. It's a fact that regular readers of this forum have had to accept for many years. He is unemployable on his own and has had to rely on his father's influence to secure a custodial job at an Oregon mental help facility at which his father has worked in for many years.

John has a problem that he refuses to address and the only solution is to keep abreast of his posting ID's and keeping adding him into newsgroup filters as you see fit.

Other than that, John is a harmless nobody and currently employed at an ideal place for his type of mental disorder. Regular readers have learned to ignore his rantings and focus on the scanner related contributors that frequent this group.

Merry Christmas and happy scanning to all!

> let the response be what it is?

There is an excellent reason why the better TV preamps have a hole between VHF LOW and VHF HI- and the answer is improved dynamic range and resistance to video intermod. Remember the IP3 figure of an amp is dependent on the NUMBER of strong signal sources within the passband AND their strength. So, by eliminating FM b'cast and VHF 2 way band (pagers etc.) the TV preamp can handle stronger TV signals w/o going into intermod or more likely cross mod distortion. The cheap Radio Shack preamps may not do band shaping (although I believe they do) but Winegard, Channel Master, Blonder Tongue and even Pico rolloff below 54, 88-108 (some have a switchable FM trap), 108-174 MHz.

Toilet-Boy, thanks for reading and endorsing the new:

--- Mackey FAQ----------

To new readers, John might confuse you, but a little background on this
internet
cockroach might help:

He has an obsession with Bill Cheek that some have characterized as the
result
of some sort of psychological damage Mackey received from either lack of

attention from a father figure, or denied sexual advances or a combination of
both. Mackey's mission in life is to post as much derogatory material about
Bill Cheek as he can on this or any other forum. The fact that Bill hasn't
participated in this forum since '98 has not stopped looney boy from carrying on
and on about his delusions regarding Mr. Cheek.

He's mentally defective and I say that without intent to hurt or insult. It's a
fact that regular readers of this forum have had to accept for many years. He
is unemployable on his own and has had to rely on his father's influence to
secure a custodial job at an Oregon mental help facility at which his father has
worked in for many years.

John has a problem that he refuses to address and the only solution is to keep
abreast of his posting ID's and keeping adding him into newsgroup filters as you
see fit.

Other than that, John is a harmless nobody and currently employed at an ideal
place for his type of mental disorder. Regular readers have learned to ignore
his rantings and focus on the scanner related contributors that frequent this
group.

You can always splurge a bit and buy a UPS (Uninterruptible Power
Supply) at a computer store. Good ones run for less than 100 bucks.
Plug it in, and it stays topped off until the power goes off. Then,
you'll have lots of time running off the UPS battery.

Of course, when asked, you can say that you are really worried about
power surges and brownouts frying your computer, and that is the real
reason you are getting it. Naturally, don't run your computer when
the power's out or the UPS will go fast... :)

James

> Are the Yupi's reliable? Thanks!

Yes!! I've had one since 1989 and another since 1993 from new. BOTH
are still fully operational. Build quality very good. Only problems
I've had are:-

Yup5000- Needed new battery hatch when locking tab broke.
Yup7100- Needed small piece of blu-tack to fix channel changing knob
on more securely and battery ejection strip now slightly split with
intensive use.

The 7100 is VERY sensitive and good for nightime monitoring with
illuminating keypad. Both are easy to use. I've thought about getting
a 9000 but the 5000 is perfectly good at the moment and I've heard the
9000 is not as sensitive as the 7100.

Date: 1999-12-22 00:00:00 UTC
From: joegizjr@aol.com
Message-ID: <19991221202707.23866.00000747@ng-cf1.aol.com>
Source record: 99207

Hi,

I just purchased and AOR8200. Can somebody tell me what type of cable do I need to connect this thing to my PC ?

Also, can someone advise on the best software to use for computer control of this unit ?

Please send responses to joegizjr@aol.com. What do you guys think of this scanner ?

Thanks,

Joe

Get a hand-held. You wont be sorry. I have several scanners, including
base models, and find that a hand-held is better, because you can take it
anywhere. I take one with me when I work around the house or yard, I also
take one in the car with me, and you can take it out of the car so you
don't have to worry about theft.

If you get a base model, you have to sit in one place to listen to it.

In my opinion the one to get is the BC 245. I have one, and am very happy
with it. The computer control works very nice with it.

The Pro 92 seems to have some really nice features, but I wuld be afraid to buy it as some people have reported problems with it.

I know what you mean about spending a lot of money. My first major scanner purchase was a Pro 43 that I paid $300.00 for (new). I felt very guilty about spending that much. However I have since spent much much more on radios. I still don't let my wife find out though. :) I work a lot of volentary overtime, and figure I provide well enough for my Wife, so I should be able to spend some on myself. My kids are at the age where they have moved out of the house (finally). My wife works, and I have no say about what she does with "her" money. "Her" money and "our" money, but no my money, you probably know how that goes.:)

Talk on the trunking message board at strongsignals.net says this is the 780XLT model, which is presumed to be ready for sale April 2000. I thought this would be the base version of the 245, with alpha-numerics and some other bells and whistles, but perhaps someone else out there has more information.

I thought the same way, bought a PRO-91 and played with it for about a week. Saw a BC895XLT for the same price on the internet and back went the PRO-91. The PRO-91 was a nice handheld but the 895 is 3 times the scanner, trunking, twice the channels, twice the audio and computer controlled, not to mention the CTCSS being built in. But even after a week of hauling the PRO-91 around and taking it back and purchasing the 895 I missed the fact that every where I went I could listen to the scanner, on walks, to and from work and even at work. I would never part with my 895, but now I own or have owned several a BC235XLT, PRO-2037 I just parted with these two. And now I have a BC245XLT, UBC3000XLT (one of these rides with me all the time) and am getting a ICOM-R2 for Christmas. If you watch the news groups and the "For Sale" board at http://www.strongsignals.net you can pick up some 3 to 6 month old scanners at great prices all the ones I have were purchased used except the 895. All the people on the news groups and Rich Wells "Strong Signals" are a bunch of stand up guys, I've never gotten a bad deal. Kind of like the Lays commercial "Ya can't listen to just one". My wife says I need scanners anonymous but now I catch her listening when I come home from work.

his
> "punishment?"

Remember OJ Simpson? Similar scenario. "Responsible" by a preponderance of the evidence in a civil court, but not "guilty" beyond a reasonable doubt in a criminal court.

> Since nothing ever came of obvious criminal activity, I must conclude that
> it was not reported to the "appropriate" committee.

Or that the Speaker of the House is essentially "untouchable" by his own chamber. That's pretty much how it played out, and has a lot to do with why Bill Clinton is still President. Money and power rule Washington, DC, not the law.

> I'd still like to know what the EXACT punishment was for both the
> Congressman and the two retirees. Do you have that info, or do you know
> where I can find it?

Court cases are public record once they've ended. There should be a record of the outcome somewhere. I know I saw news about it, but I don't have clippings handy.

I know I like to have my scanner (handheld) with me when I am running around town. I sure wouldn't want to meet up with a crazy pursuee and get t-boned (and see my family get injured in an otherwise preventable crash). Also nice not to walk into a store in the event the police are responding (but not yet at scene) of a robbery/person with a gun call (again my family means to much to me). Last but not least, I am a scanner enthusiast.

Hi,

I just bought a BC 245XLT scanner and have run into trouble. In trying to program some frequencies, I've seemed to made a mistake and now that lockout key is continually blinking in the lower right hand corner of the LCD display. I can't seem to stop it, even following the instructions in the manual and apparently can't do much else until this issue is resolved.

Do you have any tips on how to fix the problem?

Thanks,

David

Yah, shore (as they say in Holstein) - mostly PDs and state patrol lowband, but I do also have reams and reams and reams of biz freqs, if you'd like. Just email me at dejanews and I'll send 'em your way. Also, the Radio Scrap stores around here are pretty good at keeping a local freqs sheet around for your perusal - usually costs half a buck. (one of the few things Radio Scrap does well)

I have the Metrowest 1200 battery Pack for my Uniden BC200XLT. The other night it fell off the table with the power cord attached. The impact jammed the power receptacle up into the body of the battery case. Is there anyone to get inside the battery case, rather than cracking it with a hammer. As you know the OEM battery cases have screws. This Case does not. I know I could repair this expensive battery if I could just get inside it. I have tried prying around the body seams, but the thing seems to be made to darn tight. Anybody got any suggestions or has done this before.

Please return your response by posting in this board or email: TheWarns@AOL.com
I can also be contacted at ICQ#:33985226

Sounds like you're in the "Remote" mode (indicated by the flashing key in the lower right hand corner). After turning the scanner on and going through the initialization process, hold the "E" key down for approximately 2 seconds, you should then hear the scanner beep twice, and everything will be back to normal. While in remote mode, the "E" key is the only working key which is used to bring the scanner back out of remote.

They look just like the Uniden Sundowner 16 channel UHF CB.

Not true! I receive digital signals on my PCR1000 all the time by
piping the discriminator output from the radio into either a sound
card or a data slicer and running the appropriate software on my
computer.

This is a radio meant for licensed GMRS use, NOT for FRS use. A license
is needed for legal operation of this radio.

Regards,
Tony

6696. Pre Amp

Newsgroup: rec.radio.scanner

>QUOTE from Bryan"". I agree wholeheartedly with Dave. While the PRO-92 had serious
>(even fatal) deficiencies as a trunk tracking scanner, it was superb as a a general purpose unit. The PL features alpha tags an......I did return mine because I couldn't justify another unit with..."
Also to be a "devil's advocate" for a minute, I also own & like many RS scanners but they goofed big time w/ the pro-92. If you don't need trunking as you mentioned, one scanner worth looking at that no one has brought up yet is the new Bearcat SC-200, which has ALPHA numeric 200ch, PL & DPL with tone scan, comes with batteries, AC adptor/charger & the computer programming cable all in the box for under $220 delivered! Don't keep the pro 92 for over 150 bucks more just for the "aa" battery capability, & if you factor in the cost of an AC adaptor, computer cable & rechaRGEABLE "AA"S , IT'S CLOSER TO $200 MORE!!
And if Uniden, Radio Shack or whoever releases a scanner that has the major flaws of the pro-92 & then "denies" the existance any problem to anyone who calls or emails them, they deserve to be "blasted" by people without some "accusing" those of having some "vested interest in seeing that company fail"

6698. Radio Shack scanners

This is true.... it actually looks like some are "protecting" RS to me. The
least RS could do is stop calling the 92 a "Trunk Tracker"!!!

It depends Dave...some Radio Shack scanners are manufactured by GRE, and others by Uniden. Some are much better than others. They have a sale right now on the PRO-90, (hand-held trunktracker), and the PRO-2050, (base trunktracker), that are last years models, but very good scanners, at reasonable prices, if you do not require/desire a dual-trunktracker.

This would never work. You know all the people that call 911 because their
TV does not work! Those people should not have unfiltered
access to cops on the street.

One of the best sources that I can suggest for information would be listen to the freq. between 144-148 Mhz, starting at around 8:00 on the 31st, their you should fine a Amateur radio net that is in operation. You should also be listening to you local police and fire freq., although the good stuff will be from the amateur radio operators, which are normally ahead of the news with the information that they have.

John,
You may be wrong about those sites.
They probably don't own the 800 meg eqipment now.
I think they lease service from Racomm on their state-wide trunking system.
They probably still have vhf and uhf equipment at the sites you mention.

Message-ID: <hne56sgc86a46g3gr0mhoskibhd7i4qdll@4ax.com>
Source record: 99002

Guy:

I have a Pro-26 as my primary scanner. It is a very handy and easy to use radio. It has reasonable audio and makes a great portable receiver.

I had the European processor installed in mine giving me complete coverage 25-1300 MHz no gaps. I also installed an output for my tape recorder that remains at a constant level regardless of the volume control setting. Handy for monitoring while your busy.

For a general receiving antenna I use the Watson, model W801 (great at 800 MHz), and a Radio Shack catalogue sku 20-006 for VHF CB, monitoring. I also have a Nevada DD-1300 double discone on the tower for my "at home" listening. I also have a Radio Shack catalogue sku 20-032 magnetic mount for the mobile excursions.

I live near Toronto, and have never run out of new freqs to explore.

I would be willing to pay about $200.00-250.00 Canadian for a second hand unit with the European chip. I wouldn't even consider the US version after having mine even though I rarely listen to cellular.

Hope this helps in your search.

Jim Cordner

There is also voice activated (VOX) software floating around on the net, one is even freeware (I forget the name of it, but I'm sure someone will post a reply naming it). I prefer RecAll (www.sagebrush.com), $15. shareware VOX recorder that also *time and date stamps* each segment it records. It also supports various methods of compression. I'm using the GSM compression which gives me a little over 10 minutes per meg.... pretty good mileage!!!

Message-ID: <3862D936.45C9A06E@CelebrityLocators.com>
Source record: 99006

Has anyone ever actually DONE a cellphone mod for the Sportcat handheld scanner?

The radio does cover 800 mhz and of course is sold only has cell-blocked (although I do receive cell phones on some frequencies) but if anyone knows how to do it, I would like to restore it to full coverage (as God intended).

Scott

FWIW, the current issue of MT has a brief biography of Cheek written
by Cheek himself. He claims no formal education, not high school, not
college - nothing. His 'education' seems to be from his 12 years in
the military and the School of Hard Knocks.
Nothing wrong with that. Except -
His 'Engineer' claims can be taken with the same credence as the rest
his claims. His real 'expertise' seems to have been self-promotion,
self-aggrandizement, pontificating, etc.

6717. US source for Lowe Airmaster?

No, but the head tech at the radio station is a "Chief Engineer" and he doesn't have an engineering degree either. Again, this is very common in the communications field.

The profile........
Again, Toilet-Boy, thanks for reading and endorsing the new:

--- Toilet Boy Mackey FAQ (thanks to author AllSafe)

To new readers, John might confuse you, but a little background on this internetcockroach might help:

He has an obsession with Bill Cheek that some have characterized as the result of some sort of psychological damage Mackey received from either lack of attention from a father figure, or denied sexual advances or a combination of both. Mackey's mission in life is to post as much derogatory material about Bill Cheek as he can on this or any other forum. The fact that Bill hasn't participated in this forum since '98 has not stopped looney boy from carrying on and on about his delusions regarding Mr. Cheek.

He's mentally defective and I say that without intent to hurt or insult. It's a fact that regular readers of this forum have had to accept for many years.
He is unemployable on his own and has had to rely on his father's influence to secure a custodial job at an Oregon mental help facility at which his father has worked in for many years.

John has a problem that he refuses to address and the only solution is to keep abreast of his posting ID's and keeping adding him into newsgroup filters as you see fit.

Other than that, John is a harmless nobody and currently employed at an ideal place for his type of mental disorder. Regular readers have learned to ignore his rantings and focus on the scanner related contributors that frequent this group.

>
> You are exactly correct. I can't add anything to it.

Thanks again John-Bowl, knew you would agree.

>
> Bill K9KZ

Bill, I really hadn't planned on buying the UBC3000 but the price was right and the scanner was only a couple of months old and in immaculate condition. I was able to sell off a unused BC235 and RS PRO-2037 to fund the purchase and still have enough to get a second battery pack. The only thing I don't like about the 3000 is
the 2500 battery pack. I think the boys in Unidens battery engineering dept. are in a different time zone than the rest of the company (like 1968). They took a Cadillac and put wooden wheels on it. If I could have found a Yupi 7100 at the same price and age of the UBC3000 I probably would have purchased it. I like the freq. and band range of the Yupi, the step sizes and the fact it uses AA's instead of an antiquated, out of date, hard to carry a spare, cumbersome, can't walk into a convince store and purchase another when it goes dead nicad battery pack.....

6725. AOR 8K for SW listening

Newsgroup: rec.radio.scanner
Date: 1999-12-23 00:00:00 UTC
From: Jorge Morales <Sycho_Graphics@msn.com>
Message-ID: <O84aVeQT$GA.319@cpmsnbbsa03>
Source record: 99044

I am a newbie but I have been getting more involved in SW listening with my AOR 8000 (unblocked) is there anything I can do to improve reception with this scanner? A dedicated SW radio is not an option right now, just got AOR8K 3 months ago.

At present I am using just a long wire type antenna (about 25') from RS that clips onto my 20-006A antenna on scanner. It helps a lot, how about active antennas? I have seen a number of used MFJ and Vectronics active antennas fairly cheap available, A true LONG LINE type outside antenna is out of question (due to space an WIFE!) right now. I am looking into a "DX" board from Javation and I know there are several filter and crystal mods for this radio but to be honest I am just not sure what each one does. Also I am not sure if they are worth the effort.

Thank you for you help and Happy Holidays :)

I've always wondered about this part of the law. I understand that the intent is to prevent people like disreputatable tow-truck drivers and ambulance-chasing lawyers from traking advantage of emergency situations. However, it seems like a strict enforcement of the law (as if such a thing were even possible) would do far more harm than good.

For example, let's say that I am the operator of a delivery company. I know that one of my trucks is delivering stuff to Company X. I hear on my scanner that there has been an accident and the police have blocked off a major route to Company X. If my driver has to sit and wait it will cost me money and time, and if the goods are perishable it will cause even more problems. If I call the driver on my cell-phone and warn him to take another route, what harm have I done? Have I broken the law?

Or we can remove the whole money-making angle. Let's say a relative is potentially in the vicinity of an accident scene and we just want to keep them away from a potentially hazardous situation. I have a feeling that just

about every scanner owner has done something like that at some point.

-Bryan

For an experiment in HF direction finding, I need some good test cases:
HF stations with known loacation longitue/latitude. Preferably strong
stations which broadcast almost continuously: beacons, navigation
stations, TV/radio.
Does anyone have a list of such stations.
Thanks

Sorry but I strongly disagree with Richards comments

I have had the 7100 for 5 years then sold it.

Have had the 9000M3 for 1 year

The 9000 is more sensitive in all bands over the 7100,
to say otherwise is to be quite outrageous and plain wrong.

If you use the 9000 rubber ducky it is useless, turf it away and put
the 7100 telescopic in its place.

You will not believe the difference that this little change makes.

Extract from my notes:-----

I have now had a chance to compare the performance of the
MVT7100 as against the MVT9000.

Firstly the aerial on the 9000 is absolutely useless. The very
first time I turned it on -- to an Music station on 91.3 fm which
is 160 km distant i did not hear a signal at all.

I fitted the spare 7100 aerial and the music came in loudly.This
has happened numerous times over the reception range so i will
not use the 9000 aerial but use the spare 7100 one.

I brought a second 7100 aerial 3 months back because i had read
of the aerial deafness problem on the Internet -- Richard Wells
site i think. http://www.strongsignals.net

The 9000 aerial performs just as bad when on the 7100.

At a guess the 7100 aerial on the 9000 gives an improvement in
reception of about a factor of 2-2.5.

Reception on the 9000 is better all round, I have not noticed any
band that is worse than the 7100 on the 7100 aerial.In fact I use
the ATT much more than before.

Speech is much clearer and much, much louder, the 7100 has a low level
"squeal" on NZ cellphones. The 9000 is perfectly clear at all times.

The back of the 9000 gets very hot near to the serial no. label when
running on the mains power pack. Info From Bandercom is to keep to
a 12v dc supply, not ones at 13-15v.

The delay feature is flawless, I could never get perfect operation with the 7100. Some would work, others not at times.

Scanning Speeds M3

980 frequencies loaded into both models the same.

Scanning with fully loaded priority active
When 9000 is at memory no.1000, 7100 is still at 770.
31% faster.

with priority turned off
when 9000 is at memory no.1000, 7100 is still at 720
38% faster.

The 9000M3 scans 980 memories in 36 seconds with the aerial detached, this 27.22 per second.

Love the bandscope for searching, it shows activity 30 channels either side of centre. The same for the 200 'PGM' memories.

20 search bands and the ability to selectively cycle through them all is brilliant.

The lamp setup is much more convenient as well.

A large display is easier to read although the letter size is slightly smaller.

Some Frequencies on the 7100 seem 5khz off at times, really noticeable on the wfm band, the 9000 seems spot on all the time.

Surprised to see the 'pgm' memories are sorted in number order each time, on the 7100 they appear in the order as loaded in.

The dual vfo set up makes loading in data much easier, I have one set on AM and the other on FM and switch between with 1 keystroke.

Being able to "Name tag" each frequency and Band means that I do not have to carry around my notebook any more.

The centre pin of the dc jack is more robust joy,joy,oh joy, no more breaking it off.

I have only come across about 5 birdies so far, much better than anticipated.

I am very happy owner so far. The final account with a leather case was a few 10`s below $1000 from http://www.bander.com

ALWAYS USE VISA OR SIMILAR FOR YOUR COMPLETE PROTECTION AGAINST NON DELIVERY.

I am really happy as the 9000 has received a "best handheld scanner" award" on site http://www.strongsignals.net

It's what they often call DES & DVP -- a carryover from the old days
when a lot of the gear (& thus switch markings) was known as voice
privacy systems.

> If the unit is set up with DES it will not receive
> carrier or pl squelch transmissions and vice versa, unless you manually
> change it to operate in that mode and then it gives you a warning tone to
> remind you that you are no longer in secure mode.

Wrong. A long-time feature of Motorola & I assume other DVP/DES LMR
systems is clear-voice override. It's a safety & convenience issue.
The exception lies with the relatively few agencies which have some
channels programmed as being 100% 'secure.'

> As to part two, there are multiple opinions about everything.

Really?

> As the other respondent stated, if conditions become marginal, an encrypted
> signal may loose its stability, making comms impossible, in which case you
> would change to carrier squelch operation.

Well then, comms wouldn't be "impossible," would they! DES-XL &
other
modern systems have pretty much mitigated the range issue.

Had 7100 for 5 years

Broke the centre pin off of the DC jack 5 times
Resoldered the BNC centre conductor onto the main board twice
snapped the security clip off the battery cover
need paper under all knobs eventually as they got so loose and the securing
rings regularly loosened off, the aerial one as well.
wore the lettering of 3 keys through to much use
No leather case at all, so needed a new case before selling second hand because
it had small cracks around the side case screw holes

Considering the electronics packed into it and that it was hardly off at all for
5 years I do consider this package highly reliable all the same.

After 1 year of high usage the 9000 has needed no repairs as yet.

Those who like to demean Cheek either have a chip on their shoulder for seome reason or other, or have not been scanning enthusiasts for more than a year or so.

Back with the advent of the Radio Shack Pro 2004/5/6, Bill Cheek was the ONLY credible source for first-hand information on these units. He might not have a formal "Engineering" degree, but his understanding and explanation of the intricacies of scanner circuity - and his ability to share that knowledge with us "lay" scanner enthusiasts - was unparallelled.

This is common knowledge for anyone who has been interested in scanning for more than a couple of years.

No one can HONESTLY or OBJECTIVELY declare that Cheek's accomplishments FOR THE SCANNING COMMUNITY are minimal, and can be dismissed.

Attention, Attention....

Any scanner enthusiasts looking for a scanner for Xmas, be advised, there is one day left, and we at the XYZ scanner company have imposed new anti-terrorist packaging for our shipments.

Yes, for a mere $39.00 per order, we will not only gaurantee the scanner in time for Xmas, but will deliver it to your door via US Special Forces Delta Team, hermetically sealed in it's own bomb proof chamber.

Whats more....yes , there's more....

We will also gaurantee that NONE of our scanners will fall into the hands of any terrorists, kooks, wackos, or neo-nazis.

Also, for an additional $25.00, we will ensure that your scanner is Y2K compliant for the new millenium.

Hurry, order now, supplies are going fast.

Happy holidays to all...

> were even possible) would do far more harm than good.

Agreed. Unfortunately, the current trend in law enforcement policy (meaning the government's policy about enforcing laws, not necessarily that of the police) is "zero tolerance" of anything that might be remotely harmful or unpopular.

It makes me reluctant to identify myself as "conservative" when these ultra-right people come up with idiotic zero-tolerance one-size-fits-all solutions to quality of life problems. I believe in personal responsibility, not government-as-nanny.

> If I call the driver on my cell-phone and warn him to take another route,
> what harm have I done? Have I broken the law?

Technically, yes. You've done no harm, and possibly even some good (the police have one fewer truck to reroute), but in today's (American) society it is possible to violate the law without doing any harm.

Now, as to whether the law is strictly enforceable as a practical matter, I would say not. People who brag about listening to scanner traffic (especially the "banned" bands), or who post MDT traffic on their websites, or who otherwise cannot keep quiet about borderline activities get what's coming to them. It is unlikely that the average discreet scanner user will be targeted for enforcement unless the government decides, based on a media-whipped outcry over cases of the above-mentioned scanning loudmouths, that scanners should be banned altogether.

Well, I also have a wide band scanner, my Alinco, and I have used it with the SONY AN-LP1, with mixed results. (I live in a apartment) This scanner is somewhat ok, on SW, but better off to get a dedicated SW radio instead. I have both the '2010 and the ATS-909, and they beat out the Alinco hands down. Even some of the cheaper receivers that I have seem to out-do the Alinco in the SW bands. They just haven't made a Wideband receiver that can handle both Scanning and SW... I got the Alinco because I have read some reviews that claim it does ok on SW, but again, its disappointing. The best overall active antenna by far is the Sony AN-LP1. Good Luck! Hope you listen to all the Y2K stuff.. I am...

Of course our local Police would be one.

I read that Ham's are going to have a network for New Years. Does anyone know what freq they will use around Northen Ca.?

Is there a web site that has some of the freqs all these command centers will be using?

Is the OES going to be a good service to listen too?

Re-mote Broadcasts from TV and Radio mite be a good idea.

Or military? I have never seen to many feqs for the National Guard on websites.

Any how just thought I would get some input so we could all output to our repectable web sites.

Good suggestion! Also I recived and e-mail saying the live scanners on the net are going to be a good source for those not in Big Cities. Not as much local but I bet it will be interesting. Asumming the Net is still up.

R10 Reference page "NEW" URL

Hello,

The R10 reference page first created by Joost van Stuyvenberg has moved to its new location on The ScanShack.

http://members.aol.com/scanshack/r10/index.htm
or via the selection on
http://www.ScanShack.com

Joost began the R10 reference page more than a year ago but due to other commitments he was unable to continue. Joost put out the word of his intentions and asked if anyone desired to continue his efforts. I answered his request and he was kind enough to accept my offer. I hope that I am able to do justice to this effort and continue in Joosts foot steps. He has given me his original html files to tailor as needed. The look and content will remain much the same.ï¿½ï¿½Thank you to Joost for your trust and for allowing me to continue this effort !

I'd like to wish all a very Happy Holiday !

Have a GREAT one !

6764. CHP Blue-1 039.140

Newsgroup: rec.radio.scanner
Date: 1999-12-23 00:00:00 UTC
From: dtork@my-deja.com
Message-ID: <83u7e5$4oq$1@nnrp1.deja.com>
Source record: 99083

Does anyone know the tone for the CHP Blue-1, 039.140? As I understand the "Blue" it's used as a secondary, tac. and statewide common frequency. So does the pl tone change from one CHP division to another? If it doesn't change from one area to another, it would seem there would be a lot of inference, too much traffic, etc.

I would be specifically interested in the tone for 39.140 in San Diego county.

Thanks for any help and happy scanning.

One of Bill Cheeks books has a circuit you can build for a scanner that will activate a "remote mic" switch to start recording when an incoming signal is received. After the signal stops, the recorder will stop. I built one of these and installed it in my PRO-2005 at least 8 years ago and it has worked great. The benefit to a VOX unit is the scanner volume can be all the way down and you still record without disturbing others in the house. I set my scanner to the state police "talk around" frequency where the troopers chat as if it were a telephone. I can leave it run for 24 hours and then play it back, listening to what went on all hours of the night.

6767. Re: Pre Amp

Newsgroup: rec.radio.scanner
Date: 1999-12-23 00:00:00 UTC
From: joe Cool <jdn74@yahoo.com>
Message-ID: <s64uhnohrg354@corp.supernews.com>
Source record: 99086

Something no one else has thought of... a scanner's antenna input has an impedance of 50 ohms. A TV amplifier has an impedance of 75 ohms. You will end up having an antenna mismatch which would totally defeat the purpose of having an amp - GAIN. You are better off getting an amp designed for scanners with an impedance of 50 ohms and a good discone antenna both available from www.radioshack.com or somewhere else if you don't like Radio Shack.

6768. Need Info/Software for Bearcat CompuScan CP-2100

The impedance difference is not a problem. One would be better off using RG-6 (75 ohm) with the amp. I used a TV amp (rs variety) and RG-6 with my R7000 and was able to receive MILSats, something the deaf 7000 could not hear without the pre-amp.

BTW, look at the impedance of your discone across a few hundred mhzs, you rarely will see 50 ohms. It constantly changes with the frequency.

Good listening......Glenn

> Who is this Bill Cheek that everyone loves so much? Just curious.

This same question was asked a few months ago & I gave this anser
at the time. It is still correct.

Subject: FAQ - Who is Bill Cheek was:Re: BILL CHEEK INDICTED 9/30/99
Date: 10/06/1999
Author: J o h n M a c k e y <jmackey@usa.net>
Bill Cheek is a man who lives near San Diego. He used
to be active on Fidonet but then had to leave due to reasons
we won't speak of now. He then became active on this NG & the
internet but was again the cause of much trouble. Various problems
with Mr. Cheek's action's resulted in Peter Laws kicking him off of
the "Scan-L" mailing list. More similar problems with Mr. Cheek
caused him to have his internet access revoked by his
Cable company ISP last summer. Recently he was briefly held by
federal authorities and has been charged in federal courts with
various illegal actions in regards to the use of scanners. He is the
owner & operator of a company called "Comtronics" & has produced
a few books based on information he has complied
from various sources.

Note et el - Mr. Cheek has stated he is several different types of
"Engineer" but has never been able to produce any Engineer credentials
from any type of public or private body issuing such credentials. The most
recent news has been reported that on SEPTEMBER 30, 1999,
A FEDERAL GRAND JURY IN THE EASTERN DISTRICT OF
NEW YORK INDICTED WILLIAM CHEEK ON ONE COUNT OF
18 USC 2512 (1) (A), (SENDING THROUGH THE MAIL OR
CARRYING IN INTERSTATE OR FOREIGN COMMERCE, ANY
ELECTRONIC, MECHANICAL, OR OTHER DEVICE, KNOWING
OR HAVING REASON TO KNOW THAT THE DESIGN OF SUCH
DEVICE RENDERS IT PRIMARILY USEFUL FOR THE PURPOSE
OF THE SURREPTITIOUS INTERCEPTION OF WIRE, ORAL, OR
ELECTRONIC COMMUNICATIONS.).

Note et el #2 - Recently there have been un-confirmed rumors that Mr. Cheek
has lung cancer (he has smoked for many years) and does not have any health
insurance.

I hope this has been of help.

It's "possible" that it's receiving images of cell phone frequencies,
although it's more common to find them somewhere up above the 850MHz band.
The Icom IC-R2 has this characteristic between 490~515MHz.

CEI packaging service is complimentary. Even better than Ziplock bags,
we use Saran wrap so your scanners are not only factory fresh and warm from
the
oven, they are also delicious. -)

Have a great holiday.

Joe:

Radio Shack's Mag-Mount, wide-band mobile scanner antenna, #20-032, rated for 25~1,300MHz does as good, or better, than anything else I've seen. It's about three feet tall, with two loading coils, sells for around $30.00. I actually use one in my monitoring room, on top of a file cabinet. Even though it's a VHF/UHF antenna, I used to use it on a Icom PCR-1000 wide-band scanner, even with the HF frequencies, and it did a respectable job. Can't compare it to a long-wire, and dipole for HF, but on a car you don't have that option.

It would be very unlikely to work. The VHF lo band ends at 54mhz.
Another problem you are likely to encounter is overload. The
pre-amp I use has a gain adjustment on it and I've found from
experiance that unless the gain is carefully adusted it can swamp
out the scanners front end and you end up with no reception at all.
Try a "Jim" model M-75, it has band width adjustments and a gain
control as well as a GaAs Fet amplifier.

It wouldn't hurt anything to try! There is also a BNC device, that is
similar to a "Y", only straight, not at an angel, ie:

```
| |
------
|
```

So you could mount the adapter on the scanner, and have the two antennas
vertical, and parallel to one, and other. You wouldn't want to do this on a
transmitter, but with a receiver, it won't hurt anything. It may have some
directional characteristics, like a mini-beam.

Check out Viking Systems International...

100 North Hill Drive, #42
Brisband, CA 94005

(415) 467-1220 [voice]
(415) 467-1221 [fax]

www.vikingint.com

They sell professional 10, 12, 14, and 16 hour cassette recorders, starting at: $159.00, and free shipping in U.S. on prepaid orders. They're built very well too, and measure in at: 11.5" x 7.0" x 2.75".
They have all kinds of input, and output jacks, and an optional built-in VOX.

If you can find an April 1996 issue of Pop Comm, they did a very favorable review.

Actually that location in Morningside is for ALL city communications on the
800 MHz band.
They also have similar sites in So. Sioux, near West High School, downtown,
and the hill above
Riverside.

I have a amateur radio repeater in a nice spot in the Morningside area if
you are
interested in listening.

Just last week I was able to listen to the South Sioux City Fire Dept as
they were batteling a
small car fire on the highway 20 bypass!!!!!

If you have a Zip drive, then you already have the hardware
necessary... just download a freeware program call "RecordIt"

Here's the info from Iomega:

"Record live audio

This is great for dictation, recording lectures or conference
calls, or just recording a great idea you've had. And of
course you won't have to worry about space. Using
RecordIt's mono quality setting, you can record up
to ten hours on a Zip disk, or up to one hundred hours
on a Jaz disk. Create audio files to add to your presentations
or send over the internet."

You can download it from either of these two websites:

http://www.juip.com/
http://www.iomega.com/software/featured/recordit.html

>
>
>

I have been both worlds, i.e. Technician (19 years) and Engineer (7 years). This is an age old agruement of the practical world versus the professional, and has been around since the days when Maxwell presented his equations to the world.

Basically my observations come down to this:

In general most Technicians I known over the years, view Engineers as bumbling twits who because of social standing (i.e. They were born with a silver spoon in their mouths) got all the breaks. They went to college took a few tests and some classes in "basket weaving" got issued a degree. They went out into the world, became a supervisor, managing a group of technicians, issuing edicts without knowing what is going on. In turn the technicians did all the work and constantly were saving the Engineer from failure. They constantly had to "trained" them, all the time getting no credit nor pay raises like the Engineer.

On the other hand, Engineers, viewed the technicians as a surly group of individuals, whom one had to bribe with all kinds of personal rewards to get them to their jobs. When the job was completed it was usually not anything like what required according to the blue prints or test plan.

To answer the question above,

>True, but how many people working on scanners, two-way radios,
broadcasting,
> etc., have an engineering degree and are professional engineers? Not too
> many

I have know quite a few. However, not many of these people did this type of work due to the salaries being too low and opportunities for grow were nonexistant.

As an example, my old Professor and advisor grew up on "Radio Row" in NYC. This guy could fix anything you put in front of him, he had a PHd in Physics and MSEE. He wield a soldering iron as good as any technician but, the difference was he could see beyond the the physical world. If a problem existed that manifested itself in the form of new problem without prior history or a system that was out of the ordinary he could solve it ny himself. I once asked him why he did not stay in his Uncle's radio business, he said he wanted more opportunities than fixing radios day in and day out could provide. Just look at how much of "Radio Row" is still left, and the fact how many of the companies died since those days?

Today, I work as a technical manager in telecommunications industry, many of counter-parts are technicians who were promoted but of"glories of past kills". They were the honchos of yesterday, lead techs, super techs or whatever names they like to have bestowed upon them due to their past exploits. The big difference between them and guys like myself who went to college (and in the words of some of some of my co-worker "got dumb" with a college degree), is they cannot envision new technology. When a new system is in their knowledge base they fight back, saying it is too expensive, has too many un-needed features, the company is not AT&T quality, etc. In other words, rather trying adapt and understand they fight change by saying it wont work.

A better question is how many people "how many people working on scanners, two-way radios, broadcasting,
etc." have invented cutting technologies, like my old preofessor who was the co-inventor of the CO2 laser?

or maybe a more refined question is:

Do people excel in their careers field because of the learning experience and education, or because they held the same job for 30 years?

Merry Christmass all, just a little tip: DON'T SCAN AND DRIVE! there's enough tragedies happening on this special day, so make sure you use your head.

Perhaps drinking at the time felt right, but when u get behind the wheel, your a loaded weapon pointed to your head and to everyone around. Give the keys to a designated driver or a cab! christmas should eb a time of joy so all the best and hope this christmas is better than the last =)

Sour grapes? Jealousy?

I am scanning (sorry for the pun) about two years' worth of Bill Cheek's newsletter I subscribed to...scores of pages of incredible information on scanners...expanding memory channels on new units...the computerization of several models...innumerable hints and tips making scanning more enjoyable for me...

"Self-promotion, self-aggrandizement, pontificating?" You have no idea what you are talking about.

Don't jump on a bandwagon simply because one is offered to you. Try to perform a little research and engane in independent thinking before posting on this topic.

I don't know the man personally so I can't make any judgements as to his personality or charachter. I can only say that I have purchased a couple of his books and found them useful. That being said, why, if the man has not been on this NG since 1998, is this debate still raging? In the spirit of the holidays and considering the man's legal problems and illness, let's just leave him alone.

A personal note to John Mackey:

It's over. You won. Cheeck is off this NG, in trouble with the law, ill, and possibly dying. What more could you possibly want? Out of simple human decency, let it go.

No - I am stating that those who demean or dismiss Bill Cheek's accomplishments for the betterment of our hobby have no idea what they are talking about.

And these malcontents fall into the categories of:

- chips on their shoulders
- new folks to the hobby - who weren't around in the Pro 2004/5/6 days
- immature wannabes who see a derogatory bandwagon to jump on

Again, I state: No one can HONESTLY or OBJECTIVELY declare that Cheek's accomplishments FOR THE SCANNING COMMUNITY are trivial, and should be dismissed

> This was never about winning or losing. It was about truth.

Well here's some truth for you John-Bowl, post any corrections you want made.......

--- Toilet Boy Mackey FAQ (thanks to author AllSafe)

To new readers, John might confuse you, but a little background on this internetcockroach might help:

He has an obsession with Bill Cheek that some have characterized as the result of some sort of psychological damage Mackey received from either lack of
attention from a father figure, or denied sexual advances or a combination of both. Mackey's mission in life is to post as much derogatory material about
Bill Cheek as he can on this or any other forum. The fact that Bill hasn't participated in this forum since '98 has not stopped looney boy from carrying on and on about his delusions regarding Mr. Cheek.

He's mentally defective and I say that without intent to hurt or insult. It's a fact that regular readers of this forum have had to accept for many years.
He is unemployable on his own and has had to rely on his father's influence to
secure a custodial job at an Oregon mental help facility at which his father has worked in for many years.

John has a problem that he refuses to address and the only solution is to keep abreast of his posting ID's and keeping adding him into newsgroup filters as
you see fit.

Other than that, John is a harmless nobody and currently employed at an ideal place for his type of mental disorder. Regular readers have learned to
ignore his rantings and focus on the scanner related contributors that frequent
this group.

Nobody is saying that Bill Cheek has not contributed a bit to hobby scanning. I've never seen anyone say this, and I sure don't say it... I am talking about Bill Cheek the 'man'.... He is a coarse, un-feeling little boy who must demean others in order to make himself feel good about himself. His utter failure as a human has nothing to do with the fact that he has helped some scannists tinker with radios. His accomplishments pale in the dim light of his human qualities.

Steve
I have a repeater on 444.225 MHZ.
It is located in Brunsville which is just northwest of the Le Mars area.
The Call is KD0XD in 20wpm cw.
Try listening to 146.97 SARA repeater on the Nipco eastside tower.

HE'S AN ENGINEER!! Then I've got ocean front property in Arizona to sell!

Go read this link in dejanews, it is the FAMOUS message where
he defends his use of a metallic tuning tool in RF oscillator circuits
& at the END of the message signs his name "chemical engineer"!
http://x31.deja.com/[ST_rn=ps]/getdoc.xp?AN=180709613&CONTEXT=946060766.1754
071133&hitnum=6

Here he said he is a "logistics engineer"!!
http://x44.deja.com/[ST_rn=ps]/getdoc.xp?AN=181056342&CONTEXT=946061511.1975
844905&hitnum=2

Here he said he is a "process engineer"!!
http://x44.deja.com/[ST_rn=ps]/getdoc.xp?AN=180979200&CONTEXT=946061511.1975
844905&hitnum=3

Here he said he is a "telecommunications engineer"!!
http://x44.deja.com/[ST_rn=ps]/getdoc.xp?AN=180613199&CONTEXT=946061511.1975
844905&hitnum=6

Here he said "I am an engineer across a variety of disciplines, including
radio and telecommunications"!!!
http://x44.deja.com/[ST_rn=ps]/getdoc.xp?AN=181002380&CONTEXT=946061511.1975
844905&hitnum=4

Then read this link where he states the following:
"Yes, I am an engineer across several disciplines."
http://x31.deja.com/[ST_rn=ps]/getdoc.xp?AN=181539412&CONTEXT=946060766.1754
071133&hitnum=5

The only thing he didn't admit to was the truth, that being that
he is a liar!

Yo Bed-Pan Boy. When you want to run with the big dogs you gotta at least know how to spell. Between you and a fire hydrant, I'd pick the hydrant every time.

I don't celebrate Xmas, but if I did, I wouldn't be wasting time with crap like this in a newsgroup where losers like you spend their time. What's your excuse? You're without a real life, huh?

Hey come one over to my house. My toilets could use a good scrubbing. Bring your scanner. You can listen to the toilets flushing while you work.

I'm getting a BC245xlt for Christmas (I can't wait!!) and want to hook it up to my magnet mount scanner antenna on my car. I'm often out in severe weather and was just curious if there is anything I can get to protect my scanner in case the antenna gets hit by lightning. (I know I'd be pretty safe in the car, but my scanner prolly would get blown up by a direct hit, hehe). Is there anything like surge protector like APC makes for computers/telephone lines for a scanner/antenna? I've seen some for base antennas, but don't know how it would work with a car. Any ideas would be appreciated, thanks! Have a Merry Christmas and hope everyone gets a new scanner or related accessory!!

6826. John Mackey is a child buggerer!

Newsgroup: rec.radio.scanner
Date: 1999-12-24 00:00:00 UTC
From: Anon <anonymous@cotse.com>
Message-ID: <199912242012.PAA03840@cotse.com>
Source record: 98979

This message was posted anonymously:

John Mackey is a child molester, has a police record for molesting 8-12 year old boys and girls.
He's server 18 months in jail for this crime and has become more
of a danger to children since being released. He is required to register with the police whereever he lives.
During his trial his lawyer asked for mercy because John couldn't help what he did, his claim is that
his father molested him and that made him the child molester that he is today.
He's appears to be jelous of anyone who can have a normal relationship with a person of the opposite sex, as he either chooses not to or doesn't have normal
urges....for this, he punishes children.

Once my freedom of information request for his record is honored I will post it here
so you'll all know what John "toilet boy" Mackey is.
He got the nickname Toilet Boy because he tends to follow children into public rest rooms whenever he can catch one
that's unsupervised.....

6827. case for BC245xlt

I have to agree with both writers. I too dared to ask the subject a question about something ambiguous he wrote in a news letter. I received a Voluminous rant about how stupid I was and how he ' Quit giving free info a long time ago '. An answer would have taken about three words and would have been helpful to me, but that never came. Why would a 'Good Guy' go to so much effort to belittle and STILL not give an answer? This episode prompted me to get all his books(from the library, I would never contribute to his support in any way). Each is self published and absolutely RIFE with errors, redundancies, and ' This is Bill Cheek's life philosophy '. Only scant useable info. Ditto his writings in Monitoring Times (Do you know what UTP means in network media ? It does NOT

mean UNIVERSAL Twisted Pair. And this cannot be a letter transposition typo, just stupidity). Engineer ? NO WAY. And his masterpiece CE232. Did he design the hardware or write the software? Be serious. Cheek is nothing more than a hack (NOT a hacker, he hasn't the expertise). Some rave about his wonderful writing style and wit. Nothing I've seen would rate higher than a 'C' at a junior college. I am sorry that he, or anyone, is sick physically or mentally, much less both. I would not wish that for him. Cheek's minions, for whom he is an alter ego, may flame as they wish, but they can't make him or themselves something that they are not capable of being. You know, 'I'm drunk and you're stupid, but I will be sober tomorrow...' ;) Peace.

Thanks, Rick!
I've been considering getting back into amateur radio, and didn't know there were very many hams around. Have you been to Akron? there's a fellow there with a tribander, a couple of dishes, AND a 2 - meter EME array - he's found a way to cope with small - town life, I'd say!

Your repeater is now programmed into my 245.

73s, and happy Christmas!

Interesting!

I've driven to all of the obvious spots - the mall, Wal Mart, and over by the casino, and in the downtown area - how do you find the signal coverage? One afternoon, I was in Sgt. Bluff (where I work), and copied them full quieting. Have you noticed any weak spots, John?

73s, and Merry Christmas!

Message-ID: <%JR84.27$zf7.1911@reader1.interactive.net>
Source record: 98988

The magazine "Montioring Times" listed some excellent freqs to monitor during the New Year - both on shortwave, (HF) and FM.

Get the Decemeber 1999 issue for the list. If you don't have a bookstore nearby that carries it, you may still be able to get a copy from Grove Enterprises at:
http://www.grove-ent.com/MT.html

This will probably be far and away the best source for freqs, since they list known Federal agencey nets and military nets that have been testing and gearing up for Y2K.

Good luck!

John Porter

6836. Re: What kind of phone do I need...

There is no certain way to avoid interception of an RF signal. If you want to be reasonably sure that no one is listening, try a digital and/or spread spectrum phone.

Hey Guys,

I monitor air traffic freqs (118.00-135.00) and I'm having trouble bringing in signals from transmitters that are about 35 miles away from my location.

I have no problem hearing transmissions from aircraft on this specific freq but because the transmitter for the controller is about 35 miles away, I am unable to bring the signal in clearer. If I squelch down, I can hear the controller so I know I am receiving the freq, it's just weak.

I want to purchase an amplifier that will solve my problem. I don't know much about amplification so if you are an expert in this area, I would welcome your advice. Please be specific with manufacturer name and model number if possible. Cost really isn't a problem. I need a beefy amplifier that can pull the signal in and clean it up.

Thanks in advance for your opinion and your advice. I really appreciate all of you - I have learned so much from reading this newsgroup!

Happy Holidays!

Steve Davis

Yes, I have to agree with you on that one. Lately I've stopped being a
"conservative" and started being more of a pseudo-libertarian. I don't want
to digress into a political thread, but many conservative leaders have
lately become altogether too pandering and manipulative for my tastes. "Zero
tolerance" in particular seems to be a synonymous for "zero thought
required" and "zero common sense".

> It is unlikely that the average discreet scanner user will
> be targeted for enforcement unless the government decides, based on a
> media-whipped outcry over cases of the above-mentioned scanning
loudmouths,
> that scanners should be banned altogether.

Exactly, in fact I sometimes think public safety folks feel a little
flattered that we're so interested in what they do. There were two serious
fires just this week in Westminster, MD and a good friend of mine lived in
an apartment building that was effected both times. Listening to two police
agencies, 40 fire units from three counties, utility companies, and public
works officials all coordinate was pretty remarkable. I can honestly say
that my respect for the local law enforcement and fire companies has gone
way up since I started scanning--and it was pretty high in the first place.
:-) It's just amazing what these guys have to put up with every day, even
in my rural area.

It's irresponsible people who always ruin any hobby. They provide excuses for the demagogues with ulterior motives and it's very difficult to remove such a stigma once it sticks. Particularly when your typical ill-informed reporter seems so anxious to spin such stories in a negative way. Ask almost anyone "do you think the police should operate in complete secrecy" and they'll almost certainly oppose it. But that's the ultimate effect, intended or not, of cutting the public out of the loop.

I only wish there was some way that good-guy scannists could work against such negative portrayals. Any ideas out there?

-Bryan

Here are some possibilities:

Grove at: http://www.grove-ent.com/PREAMPLIFIERS.html , or Radio Shack also shows one in their new catalog, although it's special order, #RSU 10456143 @ $49.99. Some claim inexpensive T.V. amplifiers work well, and are less expensive.

An amplified antenna can produce more signal, and less noise, because it's at the source, rather than at the end of the cable. Check these out from Universal:
http://www.universal-radio.com/catalog/scanants/4064.html

You might want to start with a better antenna, (you didn't say what you're using?). Preamps tend to amplify noise, along with the signal. A good antenna, tuned for a particular band, with some gain, might be a better approach.

If it's a particular airport, (or air base), you're targeting, check out a beam (directional) antenna, such as the Grove Scanner Beam:
http://www.grove-ent.com/ANT1.html

A local dealer has a special discone, tuned for the aircraft band, made in Italy. I think it goes for around $90.00. It's at Michigan Radio, in Warren, MI @ 810-771-4711.

Hope this helps some!

Bill Crocker

Matter of fact, Rick, you're absolutely right - RACOM is leasing
service, now that you mention it. Apparently, RACOM is leasing biz
trunking over the same system, for what it's worth...

Clarification: John was right about the tower locations - they belong to Racom. Interesting detective work - I love the challenge of making my '245 work with EDACS - this is actually fun! FWIW category, I have heard a couple of trunked biz users in the same system (this was when RACOM was programming the system), back in Dubuque (another EDACS user) - and remember hearing the St. Paul ambulances on the new freqs (in Dubuque), as well as a ready - mix company or three.

Visit the *world's best* site for Northern Ireland scanner frequencies.
OK, it's the world's only site for Northern Ireland scanner frequencies,
but I can brag, can't I????

http://listen.to/northern_ireland/

And a BIG MERRY CHRISTMAS to everyone!

Happy scanning.

Stephen.

There are cordless phones that operate at 2.1 ghz I believe. Not all scanners can receive that high. Some can however. A few years ago 900 MHz wasn't found on a lot of scanners so that was the way to go.

Thanks for the clarification.
Taking info directly from Cheeks bio, the only
'job' he mentions having is the job with
the military for 12 years as
an "Electronics Technician".
Again, there's nothing wrong with that.
But he mentions no other position with any other
organization or company in his entire life, ever.
(We assume he went from the military to self-employment.)
So, I guess if the 'Electronics Technician' = 'Engineer' is an
appropriate and accepted analogy in the industry, Cheek
was right after all.

Petey Boe, Willi Arsch, John Henery and J. MacKenzie all whined about Bill Cheek's not having an engineering degree, in addition to their other weirdness.

Petey, I guess you're still sore that Cheek told you to take a hike when you came begging for free stuff. So now that he is in need, you've decided to return the favor.

Okay, I can dig it. Now shut up and go away.

?? What's it to you RG? You don't know me, nor I you. Courage is not the issue here, or you just being combative? If you wish to defend this person, do so. Gimmee some facts pro Cheek to consider. Has he done anything that anyone else, say you, couldn't have done if you didn't have, or choose, to work for a living? Giving you credit for at least an average intellect, I would say no. I've known some CB'ers that got pretty good with their toys but they didn't claim that they invented them. I didn't say anything that isn't true and objective. I simply don't think he's better than anyone else, as he does. And as to his mental condition, that's my ballpark. Tell me, do YOU consider his behavior normal? For all I know, you may have more true expertise than him OR me. Your point is??? Peace.

35 miles should be no trouble at all if you have line of sight. ATC to
Aircraft routinely go much much further than that, and you make clear
you can hear the aircraft. I suspect your line of sight to the tower
isn't all that good.

I suspect getting your antenna up about 10 more feet will solve the
problem. VHF used for Aircraft is pretty much line of sight, and
sounds to me like you are on the edge. Most respectable VHF receiver
are noise limited, so unless your feed from the antenna is fairly
long, an amplifier is not likely to help. The problem isn't signal as
much as signal to noise ratio. The best solution is more signal, and
my guess is getting the antenna a little higher is the best way to do
that.

I'm not an expert in this (or any other!) area, so I hope my opinions
will be at least helpful if not welcome. :-)

You can hear the transmissions from aircraft that are hundreds of miles
away because they are "line of sight" (no buildings or terrain between
them & you) with your location.

You don't say what kind of antenna setup you have, if it is indoor, get it outdoors and as high up as possible first.

If you still want to go the RF amplifier route, Ramsey Electronics at www.ramseyelectronics.com or 1-800-446-2295 has a broadband preamp 1-1000 mHz, model # PR-2 Broadband Preamp, assembled, for about $60 + s/h,
a kit model# AA7, case #CAA for a total of about $45 + s/h. Radio Shack item # 15-1607 (about $20 on sale) is a VHF/UHF amplified antenna for portable TV's, but works real well in most scanner ranges with the right adapters (mini to your receiver antenna in).

The bad news is no amp is going to "clean-up" the signal, and since the freq range you are interested in uses AM, any amp is going to increase background noise.

Hope this helps.

Happy Holidays to everybody!

Bill Crocker already addressed the mag-mount question, so... on the glass mount part, if you have tinted windows (most tints are metallic based) or if you would install it on a rear window with a defroster coil embedded in the glass, there would be some, maybe a lot, of signal attenuation.

Happy Holidays everybody!

I happended to look at the antenna you mentioned because I was interested in an amplified antenna. What a bummer (not a flame towards you)!!!! To spend over three hundred dollars on an antenna that comes with 40 feet of *RG-58*. Belden might be a little expensive, but at least RG-8 would be better.

Hi Steve,
Unless your coaxial cable run is so long and lossy I doubt an amp will be a cure. An amplifier can only help if you have a long lossy run (say 3dB or more) AND the amp is mounted at the antenna OR your receiver has such a poor noise figure that the NF of the preamp will appreciably reduce the system noise floor. More often than not, the preamp will overload and cause all kinds of IM and cross mod- I know because we sell thousands of filters each year to sort out these problems.
A much better solution would be a directional antenna with some gain and to reduce your feedline losses if they exceed 3dB. Remember, every amplifier adds its own noise to the system- it cannot dig signals out that are already in the noise

: In my opinion this concept would not work, Police dispatching has to be
: kep't organizized so that they can keep tracked of the officers in the
: field. If every "responsible?" adult had a transceiver I think it would
: be caos for the police. Even screening the idividuals who had transmit
: privelidges would not work, as anyone can buy a radio, and anyone who
: knows how to solder can equip it with the proper crystal to transmit on
: police frequencies. With the current system the police learn to
: recognize the dispatcher's voices, and would not be foolish eneogh to
: respond to a bogus call sending them all to the opposite end of town
: while the anonymous dispatcher robs a bank in an area that he has just
: cleared of all law enforcement.anyways wouldn't carrying a cell phone
: that is equiped with a 9 and a 1 button have the same effect?

First off, as any ham radio operator would know, it is illegal
to operate on police frequencies without the authority of the
chief of police. And that isn't going to happen.

Cell phones and scanners can do the job just as well.

THere is one flaw in all this, if all adults are given these radio's,
would not one think that the criminals would also end up with the same
radio's?

Well, Mr. Alexander, did you get enough stuffed - shirt responses yet ? Ha. Let`s see, I quit high school, and since then, I have learned Auto mechanics (Specializing in Carburetion, although I can do anything), C Programming, Visual Basic, Ham Radio, Carpentry, Plumbing, and am a computer service tech as well. So much for needing a "sheepskin" to "prove" you got a brain installed. I didn`t need any teacher standing over my shoulder to learn this stuff, either, as I can just get a few books on the subject, sit down and read them, and then just do it. What IS failing miserably in this country is the EDUCATIONAL SYSTEM , which doesn`t really provide an "education" at ALL. When you have to teach college students to read, you have a failure of the system ! I love to watch these "Jounalism Grads" on Television and in the newspapers, that can`t even spell, and use words in the wrong context all the time. some "education" they got ! You`ll have to excuse me, since I have my d son, and I wasn`t about to let HIM go the same route, so I home - educated him, and now he is going to get the MCSE. He has recieved a far better education here than he ever will in these public institutions ! HE can read and write, and spell as well ! More importantly, he knows how to LEARN something without having to have a "teacher" nursemaid him through it ! Your friend is a better engineer because he works harder at it, instead of sitting around on his "sheepskin". I`ll tell you, i have met a lot of "College Educated Idiots" in my time.....

6905. FRS Terrorism on Christmas Morning

Newsgroup: rec.radio.scanner
Date: 1999-12-25 00:00:00 UTC
From: rfenforcer@aol.com
Message-ID: <19991225122326.20436.00002042@nso-bh.aol.com>
Source record: 98860

Got up this morning and tuned the scanner to my bank of FRS frequencies. Since FRS radios have become the modern-day "walkie-talkies", I guessed plenty of kids would find them in their stockings come Christmas morning. My hunch was correct: several channels were active by 0900 hours, especially Channel 1.

After monitoring the action for about an hour, my attention focused on one particular conversation. A father was attempting to talk to his son on their new FRS radios, but was being maliciously interferred with by another adult. The second adult let loose with a tirade of obscenities, profanities, and threats which he directed towards the child. Upon hearing this, the child's father confronted this "radio terrorist" with a few choice words of his own. Within seconds, a free-for-all ensued, with the two adults threatening each other repeatedly and using language that would make a Mafia hit-man blush. This continued for several minutes. Wonderful! Looks like FRS gives us CB Channel 19 all over again, only this time the abuse is directed towards small children and on Christmas Day.

Just another example of how much we have deteoriated as a society here in America. After hearing crap like this, I almost hope the doomsdayers are correct in their predictions that the world will end one week from today.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

Guys thanks to everyone for the excellent advice!

To answer all of your questions..

My antenna is a Diamond D130J 60-1300 MHz. It is just below my roofline in my attic. Our lot sits on a hill so we have excellent elevation with no obstructions. My wire is a 40 foot run of Belden RG6 from attic to office basement in a traditional two story home. I realize the RG6 is traditional video wire but it's top of the line as far as Belden video is concerned and it works nicely for my scanning application so I use it (if you have better suggestion please let me know).

I don't know where the transmitter is so a directional antenna as someone suggested wouldn't be easy for me since I would be looking for a needle in the proverbial haystack. I am not familiar with how to "tune" a directional antenna although I have a feeling it comes down to alot of guesswork.

I have not tried amplifying the signal at the source but that is a really good idea so I am going to try that next. If it doesn't work I will look into an amplifier from a retailer that allows refunds! ;)

Thanks again to all of your advice!

Steve

Sad... we can always count on the adults(?) to screw it up for the kids.

There is hope however... a local community actually started a special class,
to teach adults how to conduct themselves, at their kids sporting events!

I, on the other hand, found it VERY funny! Who'd a' thunk "whack your
wombat?" Very original - and if this Colvin fellow is made of the
stout stuff most Kiwis are - he probably laughed his arse off, too.
Lighten up, folks - don't get your hackles up - usenet is *supposed* to
be enjoyable - and funny little jabs like these make it more so.

My three cents (I say that because surely it's worth more than two)

Hi,

I'm in Canada and looking to buy a Radio Shack scanner w/ 800mhz. I know it's illegal to monitor cell phone convos in the USA, and scanner manufacturers block out those frequencies just to be sure, but here in Canada, it's not illegal. So my question is, is a Radio Shack scanner bought in Canada different from one bought in the US? That is to say, does Radio Shack sell their cell-blocked scanners here too? Or are they altered to allow these frequencies?

Thanks!

6926. BC245xlt charging/battery issue

Newsgroup: rec.radio.scanner

Message-ID: <38652ebf@news.advancenet.net>
Source record: 98881

I just got the BC245xlt for Christmas (lucky me!) and I was curious about something on it. I've read some posts about not being able to leave the scanner plugged in to the AC adapter while having it on because it will hurt the battery. I have done this with scanners in the past and have had no problems with the batteries. Is there a reason that the BC245 won't let you keep it on / plugged in at the same time? It's just a habit for me I guess to leave the scanner plugged in while it is on (when i have it in the house). Any help/suggestions/ideas would be appreciated. Thanks again for everyone's help and enjoy the rest of Christmas day! :-)

Hmmm.... never heard of that one before. Every scanner I ever owned worked just fine with the adapter plugged in. My BC845XLT is no exception. So, I wouldn't worry! (Though it WOULD be nice to get a spare battery pack like the 835XLT!)

Frankly Tom there is entirely too much hype being put on a possible y2k disaster. Some want something to happen but the majority DO NOT.

I am the EMA Coordinator in the community where I reside and we have made no special operational provisions because the years is turning over too the new year "2000". Agencies that have not prepared ahead of time by re-programming there equipment are in sad shape. The only thing to be concerned about is the internal clocks making the trip to "2000" and the computer accepting it. Radio equipment does NOT have the year incorporated into there computers.

I find it very hard to listen to these conspiracy nuts.

So did I. :) As for the AC Adapter, that's news to me. The manual
says on page 12 that you can use the scanner while the battery charges
(ie. it is plugged into the wall). However, it also says to
disconnect the AC when the charging is complete. This tells me: 1)
You can have it plugged in while the radio is on, 2) You should unplug
it when you turn it off, since it will overcharge the batteries.

Cross-posted to: alt.radio.scanner.uk,rec.radio.scanner,alt.radio.scanner

Mmmmm Bill - I thought that you might go in this direction (Merry Christmas, by the way - and to all fellow N/G subscribers).

After much playing around with different handhelds, I sold my MVT9000, kept my old trusty 7100 and bought a Sangean ATS909 specifically for HF stuff. My reasoning? I'm delighted with the MVT7100 as a VHF/UHF portable, but it (or the 9000) just can not cut it with short wave stuff.

The arithmetic is simple (and appealing): (1 x MVT7100) + (1 x ATS909) = (1 x MVT9000)

The Sangean is beside me as we speak. I've copied hams from Colorado earlier today (5/9), Voice of America, Gander ATC on sideband, some military aviation stuff on sideband, 40m ham action from the Cayman Islands earlier etc. etc. My Yupi could not even touch that. Even if I had the Swiss curtain antenna on French Guiana!

Horses for courses - that's what I say. If you want a sports car and an estate wagon, buy both - don't look through Porsche catalogues searching for something that achieves everything.

Anyway - that's my experience. Hope that it helps. Others may disagree (and I look forward to their contributions so that we can all learn).

Happy New Year (when it comes)

Regards

Robby

I have a BC100XL which runs the batteries down when turned off. New batteries, old, no matter. Any ideas? Thanks, Homer.

6947. Re: Warren MI Police Helicopter Freq??

I might be going out on a limb here, but I think it might operate
on the Warren municipal 800MHz trunked radio system!

They probably have a 450/460MHz radio (perhaps just a handheld) for
mutual aid with other area departments, and maybe 155.865 (Michigan
Emergency Public Safety System channel). They'd also have a VHF
aircraft band radio which would be on the appropriate ATC channel and/or
123.025 or 123.050MHz AM.

And you're an even greater LOSER than the two adults arguing are.

I don't even want to know why you were so keen to
tune in on kids playing with new FRS radios...

WHy don't you stop by a Canadian Radio Shack & find out for
yourself?

My understanding is that Tandy sells the same versions in
Canada as they do in the USA -- no cellular.

By selling cell blocked scanners in Canada, Radio Shack is covering
their legal behinds. The US gov't would have banned scanners outright
if there had been a huge cross border trade in scanners from Canada
when the ECPA was enacted in 1986.

6953. Re: BC245xlt charging/battery issue

Newsgroup: rec.radio.scanner
Date: 1999-12-25 00:00:00 UTC
From: "D.R. Watkins" <drwatkins3@erols.com>
Message-ID: <843ucv$3h9$1@bob.news.rcn.net>
Source record: 98908

There is no problem in operating the 245 while plugged in. It only lengthens the required charge time. The concern about unplugging comes *after* receiving a full charge because the batteries can overheat, and damage them. (The wall wart is not a "smart charges", and provides a constant charge rate opposed to switching to trickle when the batteries are full).

Hello. I recieved an Optoelectronics MicroCounter for Christmas, and I
am debating weather to keep it or upgrade to something like the "cub".
I'm looking for comments from people that have had and used this unit,
if they liked it or not, how good or bad it is compared to nicer models,
any problems with units, etc... any and all comments, good and bad, are
welcome. e-mail replies would be great. thanks!

Very unfortunate situation, especially for the child to have to be part of, but why didn't the father just choose to switch to one of the other available channels & PL tones (14 channels & 38 available PL tones). Unless of course they were using one of the discounted models which only has Ch1 capabilities.

6958. Re: Frequency Question

Newsgroup: rec.radio.scanner
Date: 1999-12-25 00:00:00 UTC
From: Ian Fritzsche <abc@rose.net>
Message-ID: <38658F27.B50@rose.net>
Source record: 98913

Below is a large list of fast food frequencies. enjoy.

Ian
KF4AON
abc@rose.net
http://home.rose.net/~abc/

The most common frequency pairs to check are:

30.8400 --- 154.5700
31.0000 --- 170.3050
33.1600 --- 154.5100
33.4000 --- 154.5400
35.0200 --- 154.6000 *
154.5700 --- 170.2450 *
154.6000 --- 171.1050 *
457.5375 --- 468.3875
457.5500 --- 467.7750
457.6000 --- 467.8250
461.0375 --- 466.0375
460.8875 --- 465.8875
461.0875 --- 466.0875
469.0125 --- 464.0125 *

If they're using "3M" or "GM" headsets then you need to search
from 920-922 Mhz Wide FM for the speaker frequency and from
903-905 Mhz Wide FM for the headset frequency.

This list covers most Fast Food chains across the entire US.

FAST FOOD FREQUENCY PAIRING

I'm in south georgia, and I've been able to pick up the direct
communications from the shuttle during launch, for a few minutes, on
259.7 MHz.

6960. Bearcat Sportcat programming instructions?

I have not used my Sportcat in a while, and have forgotten
how to program it. Would someone with a manual send me a
copy of just the relevant pages? Happy to pay for postage,
just drop me an email. If the program instructions are just
a page or two, you can fax them to 1-520-222-5921.
Thanks for any help, much appreciated -

It would seem to me that if Canadian scanners were cellular-capable, there would be a tremendous secondary market for them that would be obvious in this newsgroup and auction houses like e-Bay and Yahoo! I've not heard of a Canadian scanner market.

Thanks in Advance

6964. Re: Warren MI Police Helicopter Freq??

Newsgroup: rec.radio.scanner
Date: 1999-12-25 00:00:00 UTC
From: "Rich Carlson, N9JIG" <n9jig@theramp.net>
Message-ID: <n9jig-F9B0BE.23522025121999@news.theramp.net>
Source record: 98919

155.370 is used as a "Point to Point" channel in MI, IN, OH, KY, MO, IL, WI, IA, and MN. While there is occasional mobile use on this, especially in WI, the vast majority of the traffic is limited to base stations only.

MI does not use the nationwide 155.475 N-LEF freq much, but the other states in the area do.

155.865 is a better bet. I would also look to the ITAC freqs of:

866.0125 Calling
866.5125 Tac 1
867.0125 Tac 2
867.5125 Tac 3
868.0125 Tac 4 (All PL 156.7)

It is also very possible that they have 800 MHz radios for the local and state systems. The state system is Astro.

Not much to really say. Twenty (20) channels is correct. Although it's
been about 17 years since it was first introduced, the large memory capacity
rom's and micros were still being developed for consumer use. AOR and J.I.L
both made excellent receivers with wide range capability, yet the prices
were $500.00-$1000.00 for these and similar radios. The AOR did AM,WFM and
NFM. Steps were 5, 12.5, 25, and 50Kc. Memory retention had started to
move away from batteries to capacitors. Beleive me, when I brought my AOR
2001 to the radio shop I worked in, the guys were blown away!!! I was in the
Army then, and word got around-people just couldn't believe the size and
features. Our S-3 (Operations) area still used a crystal controlled Regency
to monitor some other nets.

I know...I know...I know
I've had this scanner for a looong...time and i know it's time
to get out of the darkages but it still works pretty good.
i'm just asking if there are any mods that can be done to the
feq. range of this scanner? if any one knows of anything or
can maybe point me in the right direction I would be very grateful!

i've been looking for a new scanner any ideas?
i listen to police,fire,EMS but i might like one that will get
"ALL" the feqs. i know that to get this i'll probly have to buy
a "older" unit or one that can be modified for all feqs
any ideas or recomendations???

BTW the feq range on the regency unit is 30-50, 144-174, 440-512,
118-136.

Why can't you just accept there are the majority of people who dis-agree with you regarding the subjected person we have been discussing.

Here, read this impartial person's opinion from 3 years ago!!!!

****
Subject: Scanner FAQ from Bill Cheek
Date: 07/14/1996
Author: hduff <hduff@hcol.humberc.on.ca>

The following addresses Bill Cheek only;

Look what the wind blew in...

Whats the matter, is business getting slow back on Fido ? Finding that you need to diversify your ADVERTISING mediums or did you "drop by just to keep the boys inline" ? That was an excerp taken from a FIDO message (about 2 months ago) to a fellow who asks if you frequent the Internet ! Your typical pompus arrogant attitude...Must give you quite an ego trip eh Bill ? Running the show...laying the law and twisting the rules to suit your business back on FIDO. (My favorite..."Zero Tolerance" ! :) Pretty good number you have going over there but I'm sure it will fizzle !

Are you here to push "CHEEK-4...Regurgitated Material I -The Book" ? Don't bother answering that, things are nice and quiet with a good flow of intelligent traffic here on this newsgroup. Plenty of veteran scanner users and techies willing to offer their experience and knowledge for free. No underhanded advertising or book-pushing. No "FAQ" messages whos underlying agenda is to sucker someone into lining YOUR pocket.
Please don't spoil it by dragging your FIDO-boss attitude back here. Go enjoy your dictatorship world with the rest of your FIDO followers and leave well enough alone.

Hugh Duff VA3TO Toronto

I have not noticed any weak spots in the city with a mobile. However,
they are looking for weak sopts using hand-held radios inside
buildings possibly with the radio right next to their body using a
speaker-mike.

Yet one more list on the scanner list bandwagon :)

While outdated by the next gereration trunktrackers, the PRO-91 is an
inexpensive, easy to use... reliable Motorola-trunking scanner....
let's talk about it :)

Holy cow, Rick!

I am a ham - KA0PMD - but have gone way slack, never made it past
Novice, as I've been so busy, but am getting serious about upgrading my
license - that's the big idea for this year's new year's resolution...

'Tis a small small world!

Hey, John!

I've always wondered why Motorola doesn't make a mike with an antenna mounted on it, for 800 mhz....must be an issue with signal loss in the coax...to make a coax thin enough to be included in the mic cord, it'd be way too lossy...that's my best guess, at least...

THere is one flaw in all this, if all adults are given these radio's,
would not one think that the criminals would also end up with the same
radio's?

Let's see...a thread I know NOTHING about? Well let's correct that little mistaken factoid of yours. I have subscribed to alt.radio.scanner and rec.radio.scanner for at least three years now, so it's safe to say that I am well aware of the situation between you and Mr. Cheek. As usual Mr. Mackey you chose to read what wasn't there. I said I didn't know the man personally so I couldn't make any judgements as to his personality or charachter. The only assumptions I can make are those based on his work and his postings here. Up until now I CHOSE not to wade into the fray simply because I viewed it (as most people on this NG do) merely as a pissing contest between you and Mr. Cheek.

What I asked for was for you to back off given the circumstances the man finds himself in, whether it's his own doing or not. You know, show a little human decency and compassion? Be the bigger man? Apparently sir you are not capable of those qualities.

As far as this being about the truth, it stopped being about that a long time ago. This is all about your petty little vendetta against Mr. Cheek and his with you. I always gave you the benefit of the doubt and assumed there were two sides to this story. Now the truth is apparent. Even with Mr. Cheek no longer on this NG and apparently down and out in other ways, you still continue your actions.

You have a lot to offer this NG in terms of scanning knowledge Mr. Mackey. Why not focus your time and energies towards that rather than a pointless argument with someone who isn't even here anymore?

Hey all, i am wondering what are the local HAM and amuture radio freq in the Bay Area CA. I would like to gather as much information as possible before the New Year. Personally I know that ALL of the local police have almost everyone working on the new year, and that AMR our local ambulance company has on call operations lasting from 25 of december to the 1st, with an extra 10 units on the road. If anyone needs any information about Santa Clara dont hesitate to email.

That is about as libelous a statement as I ever heard. You or I may not like the man but there is no excuse for posting something like that on the NG unless you have proof. Figures that it came from an anonymous mail server. And patton, if you truly have figured out who posted that, the information should also be passed on to Mr. Mackey, like him or not, so that he may take any civil action he deems necessary.

Hi, Jammer, and welcome to scanning!

I recommend that you start with two online references. The first is Rich Wells' Strong Signals Resource Page at http://www.strongsignals.net/ That will lead you to a lot of other resources, like the PerCon Datafinder frequency database at http://www.perconcorp.com/datafinder/index.html. I took a quick look there under "US Frequencies" and found these:

```
FREQUENCY CALLSIGN COMPANY NAME RS CITY ST COUNTY
========== ======== ================ == ======= == ======
46.0600 KLB308 WATAUGA, CITY OF PF WATAUGA TX TARRANT
46.0800 KLB308 WATAUGA, CITY OF PF WATAUGA TX TARRANT
154.0550 KZE518 WATAUGA, CITY OF PL WATAUGA TX TARRANT
482.5625 KGA668 WATAUGA, CITY OF PW WATAUGA TX TARRANT
482.6625 KGA668 WATAUGA, CITY OF PW WATAUGA TX TARRANT
482.9625 KGA668 WATAUGA, CITY OF PW WATAUGA TX TARRANT
485.5625 KGA668 WATAUGA, CITY OF PW WATAUGA TX TARRANT
485.6625 KGA668 WATAUGA, CITY OF PW TX
485.9625 KGA668 WATAUGA, CITY OF PW WATAUGA TX TARRANT
154.9500 KLA996 WATAUGA, TOWN OF PP TX
155.3700 KLA996 WATAUGA, TOWN OF PP WATAUGA TX TARRANT
```

Good listening,
Charley_Harp@alum.calberkeley.org

Don't listen to those that will say use WD-40
I personally would not use any WD-40 as it will end up attracting the dirt
you try to remove.
Tuner cleaner is the best if it has some triclor base.
You may still need a new keypad.

Unless you plan on importing an unblocked scanner into the country, you're
best bet is to buy a modified(therefore used) scanner for the unblocked
access.

Probably some dirt buildup on the pad and/or circuit board surfaces. Get
some electronics cleaner and clean both and you should be back in business.

Tim, Santa brought you coal again this year didn't he? Cheer up pal, there's always next year!

I wish I had thought of listening to FRS. I can imagine beside the ignorant adults the kids (yes kids) who got new talkies would have been fun to listen to. When my son was quite young he received a set of walkie talkies. What fun listening to my son and his friends communications. I heard a number of battles of WWI and WWII replayed. most of the names were new to me, many of the weapons seemed not to fit the time period and I don't recall Darth Vader or Skeletor being part of the Allied forces but it was great drama and I don't think I would have wanted to miss it.

Happy New Year

Glenn

7024. Police Call on CD-ROM

Newsgroup: rec.radio.scanner
Date: 1999-12-26 00:00:00 UTC
From: Kevin Patterson <kandtp@fiai.net>
Message-ID: <s6du5t8ih4592@corp.supernews.com>
Source record: 98766

I would be interested to know what others think of the Police Call on CD. I had an older Percon Disk (maybe a 97) so that is all I have to compare it to. I must admit I was a bit disappointed with Police Call. The Percon disk had much more info. When I searched for local freqs, the Percon disc went down to 2-3 man contracting outfits, farmers and other small outfits. The Police Call disk listed only a few larger businesses. I admit I probably wouldn't monitor those anyway, but you never know.
The Percon disk also let you search by long. and lat. , also by county. If you can on Police Call, I have yet to find out how. At $34.99 it also seems a bit pricey.
It is easy to use and searches pretty fast. Gives trunking freqs and some ID's. It also covers the entire US, not just a few states.

Just an opinion . . .

>Thanks, Joe

Digital spread spectrum (DSS) cordless phones are non-monitorable by any available scanners. Anybody with the equipment, knowledge, and desire to be able to intercept and decode your conversations on a DSS phone wouldn't have much problem tapping your line, and it would likely be (federal) government level doing it, legally or otherwise.

DSS is available on phones in both the 900 mHz and 2.4 gHz frequencies. At least _some_ of the 2.4 gHz models use 900 mHz for the handset to base transmissions, and someone recently posted an article that one of the Panasonic® models of this type also transmit the handset signal in analog (very monitorable!) mode; so research before you buy, or at least make sure there is an easy to return/exchange policy. :-)

And, of course, if the person you are talking _to_ is using an analog cordless phone the entire conversation might be received by almost anyone!

Hope this helps.

Source record: 98794

I would like to add .csv files to my website. The files must be within the range of the IC-R-75 .500 mHz- 60 mHz. ***note these files will also work with the pcr100 and pcr1000. If you own these radios you can also send me files (just within the specified range only, please). After adding these files to my web site they will be available to all who want them free of charge. This is just a hobby for me, If as many people as possible will "chip in " then we will have files for everyone. I will post anything such as utility files, SW files, cordless phone files, CB files, WEFAX files, SSTV files, anything that falls witihn the above stated frequencies. if this turns out to be successful, in the future I will start posting PCR100 and 1000 files. the files will be posted on my shortwave web site at http://www.users.uswest.net/~lgrswold Also anyone knowing URLs to SW stations I do not have listed let me know and I will add them. Right now I am only doing True SW broadcasters, no pirate, no ham just legal licensed sites. Thanks for everyones support, I hope this will benefit all R-75, pcr100, pcr1000 owners. Lane Griswold

Why don't you little kiddies take your ball and go home. I thought this was a "SCANNER" newsgroup. Take that bull shit to the appropriate newsgroup or the telephone. Better yet, take to the street at high noon and settle it once and for all.

7052. Re: Canada Radio Shack?

Newsgroup: rec.radio.scanner
Date: 1999-12-26 00:00:00 UTC
From: Craig Fraser <cfraser@interlog.com>
Message-ID: <38664721.742B042A@interlog.com>
Source record: 98817
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Same as the US ones, but fewer new models and some US-discontinued models. Be a bit wary of the places that sell the non-cell-blocked scanners. Some are actually European models that have different frequency steps on some bands than are used in NA, and a few other differences that I forget. The dealers never mentioned this to me (hard to tell from the provided specs) but the manufacturers did. I can hear cell perfectly well (images) on my new US model scanner. You will probably get tired of listening to cell very quickly, though it can be amusing at times, but not too interesting. I think it's more the lure of the forbidden fruit to US listeners, like Cuban cigars to US smokers. They're really not missing that much.

Thanks. I just got this freq 502.5375MHz, PL 114.8Hz, and have heard activity on it already, though not much. It might be an alternate channel, like Bridgewater's channel 6. Also, I just got word that 502.5375MHz, PL 100.0Hz, is their main UHF freq. I just input that in and haven't heard anything yet.

Regards,
Tony

Hello Friends,

A friend of mine is a volunteer fireman, and he asked me to help find him a scanner. Our Borough still utilizes Lo, Hi, and Uhf public safety frequencies. So, I am looking for (ideally), a tri band scanner, remember ions ago Radio Shack had made a 8 (?) channel model, but if not, one covering Lo and Hi bands would suffice. No problem if it's broken, I'm a radio tech with my own shop and can handle repairs. Any models appreciated. Thank you very much for your help!

Glenn,

They operate on the Warren TRS system. They are known at "VICTOR" units, most likely 103 or 102.
They operate in the evening hours and fly for about 2 hours at a time.
They currently keep the choppers at Berz-Macomb Airport.
The will assist other communities from time to time and the patch on the trunk system is usually the lein channel and it is patched into 460.150mhz. No clue as to why they use lein for the patch as they have talk groups for mutual aid and don't use that for the patch!!!
Now why in the hell the 3rd largest city does not have a UHF & VHF radio with all the area freq's in it so they can talk direct is beyond me! But then again we have some pretty good cops and many that I have great friendships with, but there has not been one person in charge of the communications in this city that new how to properly operate any kind of radio system.
If you need any more help let me directly by e-mail,. I monitor Warren & Center Line around the clock

In the UK it is not illegal to buy or sell a scanner that will work at
any frequency, but it is illegal to listen to anything other than hams
or broadcast :-(
I own 6 scanners and 4 of them have cellular coverage (UK and US), but
have found cell phone listening to be very uninteresting, and agree with
the bit about 'forbidden fruit', with me it is a case of it's here if I
need it..

First - I have never blown up a repeater.

Second - The person you mention made MANY blunders of competence, the suggesting of using a mettalic tuning tool to adjust RF oscillator circuits is an excellent & well documented example.

Third - The person you mention did blow up a SAT dish when he allowed it to connect with high power wires which landed him in the hospital when he lived in Colorado about 15 years ago.

Watch the PL's. While you're searching for new frequencies it may
pay to use carrier squelch initially. From what I've found, the sheriff
uses 114.8 Hz for VHF-low and UHF-T. See my response to your post on
alt.radio.scanner for more.

Radio-Shack Realistic PRO-37 Scanner For Sale.

It's a Top of the Line Portable Scanner that covers UHF and VHF Bands from 30-54 MHz and 108-174 MHz and 380-512 MHz and Cellular 806-960 MHz.

You can program 200 channels into it, and it has direct-entry of frequencies.

It can scan 10 groups of frequencies, one or all, as you wish, or you can enter the frequency manually if you prefer, or choose the frequency you want to hear from the 200 you have entered into it.

It measures 6.5 inches high by 2.75 inches wide by 1.75 inches deep.

It is in As New Perfect Condition, no scratches, and was used only one year.

$199.00 plus shipping.

Contact: bellavance@videotron.ca

I've got an MVT9000 (3.3 as modified by the super folks at Bandercom) and while it doesn't match my R5000 Kenwood or 2010 Sony, for a portable 'brick' it does a most effective job for me. I listen to 20M SSB and 40M CW and it comes through nicely given the restrictions. Yes, I do have to turn on the attenuator with my G5RV at home, and a dipole up 50' at work, but it does pull in the stations on shortwave. I especially like the fact that there are two VFO's, and a quick button punch for entering in new freqs.

Again, I don't disagree, but for me, the Yupi 9K fits my bill. It's small,
listens on EVERYTHING from DC-to-Light (100Khz-2G), portable and above all,
works all the time.

If you re-read his original message he said he turned on his scanner and listened to the FRS freqs. He never said that he did it to listen to kids. You insinuate that he his some kind of kiddie toucher. You must be the one with a sick mind to even suggest that. People listen to all sorts of freqs for various reasons. I.E. fast food, military etc. Are these pepole hungry? Or are they planning a terrorist act? Probally not.

You're right, I overlooked that part of his question. Warren's police chopper does use the 800MHz trunked system "within" Warren... on 851.4875, 852.4875, 853.4875, 854.4875, 855.4875, and 856.0875 (not a typo). However, I'm not sure how, or if, they can talk directly to surrounding cities police departments, as the other cities do not appear to have access to Warren's trunked frequencies. The frequency that appears to be used for mutual aid, (155.3700), is only assigned to one base unit in Warren. It's possible the chopper uses the phone patch available through Warren's 800MHz trunked system. Warren's police helicopter unit is referred to as "Victor" on the air.

So after charging has completed, open the battery compartment and unplug the battery pack. The scanner will function normally with no damage to the unit. Check out a Maha MH-C777 conditioner, recharger, well worth the money if you've got any investment in Nicads or NiMH batteries and it charges just about any kind of rechargeable battery.
Check out these sites for more info...

Radio Shack PRO 26 Hand Held Scanner For Sale. Covers 25 MHz - 1.3 GHz. No mods have been performed on this scanner. Comes with owner's manual, box, charger, and batteries. It would make a really nice Christmas present. $200. Buyer will send either a Money Order or Cashier's Check to me. Upon receiving it, I will then send out the scanner using UPS Ground. The Tracking Number will be e-mailed to the buyer. E-mail BTJustice@cloudmaster.com and don't reply to me here as I edited my return address to cut out spam.

Nah, you can use it while plugged in and charging if you want. It will take longer to charge, is all. If you want to use it on AC power only for an extended period of time you may want to pop out the battery pack until you need it again.

It's always best to be careful, I suppose, but to be honest I gave up worrying about the health of my batteries a long time ago. For all the cautions I've heard about unplugging the scanner when it's finished charging I've left mine plugged in accidenally for days at a time and nothing horrible ever happened.

Another frequent poster put it really well, to paraphrase: If you take care of your batteries and follow all the instructions they'll perfom optimally for about a year, but if you ignore the instructions they'll only last about 365 days. :-) That may be overstating it a little, but never let your charging cycles and stuff interfere with your use of the scanner when and where you want--that would defeat the purpose. :-)

-Bryan

Geesh, that sucks. I've never been stopped while I had a scanner in the car, but I think my local police would be more understanding. Of course, Maryland has no laws against scanners in vehicles, though nearby Washington DC does, I think, and it would be almost trivially easy to drive into DC jurisdiction without even realizing it. I always take the Metro into DC, myself.

I'm curious, what were the other ignored reasons given for having a scanner in the car, and were any of them applicable to you, strictly speaking? Sounds like the local law enforcment folks are a bit overzealous, and your representatives a little too lax. Good luck. :-(

The other night a hit-and-run was reported along the street where I live and I watched the road for a few minutes to see if the suspect vehicle came into sight. I didn't see it, but I did see the Sheriff's Department car responding to the call searching the area. I'm pretty sure if I'd seen something and called it in they wouldn't have been upset. In fact, I've often heard the dispatcher update cars on patrol with information called in by ctizens about suspicious activity or persons that they're looking for, and the only way I can think of for those people could have know about the incidents in question was via a scanner.

Well, if you have to defend yourself in court, GET A LAWYER.

Second, make sure he reads the law, and any previous decisions in your state -- precedents. Some statutes (no, I am NOT a lawyer, just cautious) apply to radios _installed_ in a car, not carried on one's person, and the statute YOU mention sounds as if it makes scanner possession unlawful ONLY when during commission of a crime. I don't know what your state's law IS, so... get an attorney. Fast!

Good luck,

Cortland

> and can not be momnitored by conventional analog scanners. They have told

Ericsson's trunking system is EDACS, which stands for Enhanced Digital Access Communication System. Unfortunately, Ericsson's salespeople often overstate the case regarding what "Digital Access" means. It only means that the system is computer controlled, not necessarily that the voice communications are digital. Ericsson's digital voice system is called AEGIS (as far as I know, this is not an acronym), and may or may not be used in conjunction with an EDACS network.

The best way to find out how to proceed with the new radio system is to program the frequencies into a regular scanner. If you can hear analog voice traffic, then you can move on to getting an EDACS-capable scanner. If all you hear is static-like noises, digital voice communications are in use and you are SOL as far as finding any scanner that will enable you to monitor the system. You'll have to buy actual Ericsson digital transceivers, then find a radio shop that isn't afraid to program them for you, especially if you can't get permission from the local authorities to have a radio set up.

It is possible that the newest digital voice systems are using a protocol that is compliant with APCO Project 25 for open architecture, and that eventually the major scanner manufacturers will be able to produce a scanner that demodulates their communications. You may have to wait a few years, though.

If it is indeed an EDACS system, then it is receivable by a properly programmed, properly operating trunk-tracking scanner. I suggest you look for such an instrument. There are at least two maufacturers of trunk-tracking scanners, and I believe Radio Shack sells some that WILL track EDACS. However, thisis new (from them, anyway) and I suggest you check out scanning Web Sites (Such as http://www.strongsignals.net) for more information.

Good luck!

What you are hearing is a rebrodcast of the shuttle over a ham radio
repeater. Not sure how that particular repeater is getting the audio
but is is probably being relayed in from a ham radio operator. There
are probably sevaral hundred repeaters on that frequency in the US and
probably only a handfull are doing this.
It may or may not be done for the next mission.

Doctor Gonzo wrote:

Ok I now want to get an EDACS capable scanner...

There is one system locally that I want to monitor and when the unit is at home it will sit on that system only as the other stuff I want to hear is already in the half dozen other scanners I use...

But since only handhelds are available,when I leave the house I might switch over to conventional scanning or a MOTOROLA system from time to time...

Which is the best??? RS or UNIDEN...on the shelf here are three of each, all base units and I love them all...

I've read the reviews to date, but someone who has used them to decipher them for me and recommend the best...

Pse e-mail me as I don't get to the newsgroups all that often...

many thanks...

But I suspect your input would be appreciated here also....

thanks...

cleve

Wrong John-Bowl. Being a janitor at the welfare office hasn't increased your
awareness of healthcare has it Toilet-King?. First, insurance is different
depending what on state you are in. Anyone with half a brain would quote
something a year and a half old Toilet-Boy. In the State of Washington the
last company offering individual policies is gone at the end of the year
John-bowl. If you aren't in a COBRA or in a group policy you are SOL. No
reason to doubt California isn't in a similar state of affairs. You aren't
going to get "squat" for $146 John-Bowl, as usual you are blowing smoke to
cover your tracks and know nothing.

> > scenario where the self-employed - or not-employed - person may have a

I suggest you contact your local community college or investigate
nite courses thru your high school for the purposes
of enroling in a course such as "Verbal Communications 101".
You could gain a lot by successful completion of such a course
& learn way to express yourself without the repeated
profanity & cursing.

Dear Interested Party ,

You can earn $50,000 or more in the next 90 days sending e-mail.
Seem impossible? Read on for details.

"AS SEEN ON NATIONAL TV"

Thank you for your time and interest. This is the letter you've been reading about in the news lately. Due to the popularity of this letter on the Internet, a major nightly news program recently devoted an entire show to the investigation of the program described below, to see if it really can make people money.

The show also investigated whether or not the program was legal. Their findings proved once and for all that there are absolutely no laws prohibiting participation in the program. This has helped to show people that this is a simple, harmless, and fun way to make some extra money at home.
The results of this show have been truly remarkable. So many people are participating that those involved are doing much better than ever before. Since everyone makes more as more people try it out, it has been very exciting to be a part of lately. You will understand once you experience it.

I did, and so far it's going great!

HERE IT IS BELOW:
*** Print This Now For Future Reference ***

The following income opportunity is one you may be interested in taking a look at. It can be started with VERY LITTLE investment and the income return is TREMENDOUS!!!
$$$

If you would like to make at least $50,000 in less than 90 days!
Please read the enclosed program...THEN READ IT AGAIN!!!

$$$

THIS IS A LEGITIMATE, LEGAL, MONEY MAKING OPPORTUNITY. It does not require you to come into contact with people, do any hard work, and best of all, you never have to leave the house except to get the mail. If you believe that someday you'll get that big break that you've been waiting for, THIS IS IT!

Simply follow the instructions, and your dreams will come true. This multi-level e-mail order marketing program works perfectly...100% EVERY TIME.

E-mail is the sales tool of the future. Take advantage of this non-commercialized method of advertising NOW!!! The longer you wait, the more people will be doing business using e-mail. Get your piece of this action!!!

The enclosed information is something I almost let slip through my fingers. Fortunately, sometime later I re-read everything and gave some thought and study to it. My name is Jonathan Rourke. Two years ago, the corporation I worked at for the past twelve years down-sized and my position was eliminated. After unproductive job interviews, I decided to open my own business. Over the past year, I incurred many unforeseen financial problems. I owed my family, friends and creditors over $35,000. The economy was taking a toll on my business and I just couldn't seem to make ends meet. I had to refinance and borrow against my home to support my family and struggling business.

AT THAT MOMENT something significant happened in my life and I am writing to share the experience in hopes that this will change your life FOREVER FINANCIALLY!!!

In mid December, I received this program via e-mail. Six month's prior to receiving this program I had been sending away for information on various business opportunities. All of the programs I received, in my opinion, were not cost effective. They were either too difficult for me to comprehend, or the initial investment was too much for me to risk to see if they would work or not. One claimed that I would make a million dollars in one year...it didn't tell me I'd have to write a book to make it!

But like I was saying, in December I received this program. I didn't send for it, or ask for it, they just got my name off a mailing list.

THANK GOODNESS FOR THAT!!! After reading it several times, to make sure I was reading it correctly, I couldn't believe my eyes. Here was a MONEY MAKING PHENOMENON. I could invest as much as I wanted to start, without putting me further into debt. After I got a pencil and paper and figured it out, I would at least get my money back. But like most of you I was still a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161 24-hrs) and they confirmed that it is indeed legal! After determining the program was LEGAL and NOT A CHAIN LETTER, I decided "WHY NOT."

Initially I sent out 10,000 e-mails. It cost me about $15 for my time on-line. The great thing about e-mail is that I don't need any money for printing to send out the program, and because all of my orders are fulfilled via e-mail, my only expense is my time. I am telling you like it is--I hope it doesn't turn you off, but I promised myself that I would not "rip-off" anyone, no matter how much money it made me.

In less than one week, I was starting to receive orders for REPORT #.1 By January 13, I had received 26 orders for REPORT #1. Your goal is to "RECEIVE at least 20 ORDERS FOR REPORT #1 WITHIN 2 WEEKS. IF YOU DON'T, SEND OUT MORE PROGRAMS UNTIL YOU DO!" My first step in making $50,000 in 90 days was done. By January 30, I had received 196 orders for REPORT #2. Your goal is to "RECEIVE AT LEAST 100+ ORDERS FOR REPORT #2 WITHIN 2 WEEKS. IF NOT, SEND OUT MORE PROGRAMS UNTIL YOU DO. ONCE YOU HAVE 100 ORDERS, THE REST IS EASY, RELAX, YOU WILL MAKE YOUR $50,000 GOAL." Well, I had 196 orders for REPORT #2--96 more than I needed. So I sat back and relaxed. By March 1, out of my initial emailing of 10,000, I received $58,000 with more coming in every day.

I paid off ALL my debts and bought a much needed new car. Please take your time to read the attached program, IT WILL CHANGE YOUR LIFE FOREVER!!!

Remember, it won't work if you don't try it. This program does work, but you must follow it EXACTLY! Especially the rules of not trying to place your name in a different place. It won't work and you'll lose out on a lot of money!

In order for this program to work, you must meet your goal of 20+orders for REPORT #1, and 100+ orders for REPORT #2 and you will make $50,000 or more in 90 days. I AM LIVING PROOF THAT IT WORKS!!!

If you choose not to participate in this program, I am sorry. It really is a great opportunity with little cost or risk to you. If you choose to participate, follow the program and you will be on your way to financial security. If you are a fellow business owner and are in financial trouble like I was, or you want to start your own business, consider this a sign. I DID!

Sincerely,
Jonathan Rourke

HERE'S HOW THIS AMAZING PROGRAM WILL MAKE YOU THOUSANDS OF DOLLAR$

INSTRUCTIONS:

This method of raising capital REALLY WORKS 100% EVERY TIME. I am sure that you could use up to $50,000 or more in the next 90 days. Before you say "BULL... ", please read this program carefully.

This is not a chain letter, but a perfectly legal money making opportunity. Basically, this is what you do: As with all multi-level businesses, we build our business by recruiting new partners and selling our products. Every state in the USA allows you to recruit new multi-level business partners, and we offer a product for EVERY dollar sent.

YOUR ORDERS COME BY MAIL AND ARE FILLED BY E-MAIL, so you are not involved in personal selling. You do it privately in your own home, store or office.

This is what you MUST do:

1. Order all 4 reports shown on the list below (you can't sell them if you
don't order them).

-- For each report, send $5.00 CASH, the NAME & NUMBER OF THE REPORT YOU ARE ORDERING, YOUR E-MAIL ADDRESS, and YOUR NAME & RETURN ADDRESS (in case of a problem) to the person whose name appears on the list next to the report.

MAKE SURE YOUR RETURN ADDRESS IS ON YOUR ENVELOPE IN CASE OF ANY MAIL PROBLEMS!

-- When you place your order, make sure you order each of the four reports. You will need all four reports so that you can save them on your computer and resell them.

-- Within a few days you will receive, via e-mail, each of the four reports. Save them on your computer so they will be accessible for you to send to the 1,000's of people who will order them from you.

2. IMPORTANT! DO NOT alter the names of the people who are listed next to each report, or their sequence on the list, in any way other than is instructed below in steps "a" through "f" or you will lose out on the majority of your profits. Once you understand the way this works, you'll also see how it doesn't work if you change it. Remember, this method has been tested, and if you alter it, it will not work.

a. Look below for the listing of available reports.

b. After you've ordered the four reports, take this advertisement and remove the name and address under REPORT #4. This person has made it through the cycle and is no doubt counting their $50,000!

c. Move the name and address under REPORT #3 down to REPORT #4.

d. Move the name and address under REPORT #2 down to REPORT #3.

e. Move the name and address under REPORT #1 down to REPORT #2.

f. Insert your name/address in the REPORT #1 position.

Please make sure you COPY ALL INFORMATION, every name and address,
ACCURATELY!

3. Take this entire letter, including the modified list of names, and save it to your computer. Make NO changes to the

instruction portion of this letter.
Your cost to participate in this is practically nothing (surely you can afford $20). You obviously already have an Internet connection and e-mail is FREE!

There are two primary methods of building your downline:

METHOD #1: SENDING BULK E-MAIL

Let's say that you decide to start small, just to see how it goes, and we'll assume you and all those involved send out only 2,000 programs each. Let's also assume that the mailing receives a 0.5% response. Using a good list the response could be much better.

Also, many people will send out hundreds of thousands of programs instead of 2,000. But continuing with this example, you send out only 2,000 programs. With a 0.5% response, that is only 10 orders for REPORT #1.

Those 10 people respond by sending out 2,000 programs each for a total of 20,000. Out of those 0.5%, 100 people respond and order REPORT #2. Those 100 mail out 2,000 programs each for a total of 200,000. The 0.5% response to that is 1,000 orders for REPORT #3.

Those 1,000 send out 2,000 programs each for a 2,000,000 total. The 0.5% response to that is 10,000 orders for REPORT #4. That's 10,000 $5 bills for you. CASH!!! Your total income in this example is $50 + $500 + $5,000+$50,000 for a total of $55,550!!! REMEMBER FRIEND, THIS IS ASSUMING 1,990 OUT OF THE 2,000 PEOPLE YOU MAIL TO WILL DO ABSOLUTELY NOTHING AND TRASH THIS PROGRAM! DARE TO THINK FOR A MOMENT WHAT WOULD HAPPEN IF EVERYONE, OR HALF SENT OUT 100,000 PROGRAMS INSTEAD OF 2,000. Believe me, many people will do just that, and more! By the way, your cost to participate in this is practically nothing. You obviously already have an Internet connection and e-mail is FREE!!!

REPORT #2 will show you the best methods for bulk e-mailing, tell you where to obtain free bulk e-mail software and where to obtain e-mail lists.

METHOD #2 - PLACING FREE ADS ON THE INTERNET

There are HUNDREDS of FREE places to advertise. Let's say you decide to start small just to see how well it works. Assume your goal is to get ONLY 10 people to participate on your first level. (Placing a lot of FREE ads on the Internet will EASILY get a larger response.) Also assume that everyone else in YOUR ORGANIZATION gets ONLY 10 downline members. Follow this example to achieve the STAGGERING results below:

1st level--your 10 members with
$5.....$50

2nd level--10 members from those 10
($5 x 100).....$500
3rd level--10 members from those 100
($5 x 1,000).....$5,000

4th level--10 members from those 1,000
($5 x 10,000).....$50,000

THIS TOTALS ----------$55,550

Remember friends, this assumes that the people who participate only recruit 10 people each. Think for a moment what would happen if they got 20 people to participate! Most people get 100's of participants!

THINK ABOUT IT! For every $5.00 you receive, all you must do is e-mail them the report they ordered. THAT'S IT! ALWAYS PROVIDE SAME-DAY SERVICE ON ALL ORDERS! This will guarantee that the e-mail THEY send out with YOUR name and address on it will be prompt because they can't advertise until they receive the report!

AVAILABLE REPORTS

*** Order Each REPORT by NUMBER and NAME ***
Notes:

-- ALWAYS SEND $5 CASH (U.S. CURRENCY) FOR EACH REPORT. CHECKS NOT ACCEPTED.

-- ALWAYS SEND YOUR ORDER VIA FIRST CLASS MAIL.

Make sure the cash is concealed by wrapping it in at least two sheets of paper. On one of those sheets of paper, include:

(a) the number & name of the report you are ordering,

(b) your e-mail address, and

(c) your name & postal address.

PLACE YOUR ORDER FOR THESE REPORTS NOW:

REPORT #1 "The Insider's Guide to Advertising for Free on the Internet" ORDER REPORT #1 FROM:

US Investment Securities Services
1405 Cherry Rd.
Manitowoc WI. 54220

REPORT #2 "The Insider's Guide to Sending Bulk E-mail on the Internet"
ORDER REPORT #2 FROM:

Jon Camacho
19265 Powhattan Rd.
Apple Valley, CA 92308

REPORT #3 "The Secrets to Multilevel Marketing on the Internet"
ORDER REPORT #3 FROM:

ProNet
8160 SVL Box
Victorville, CA 92392

REPORT #4 "How to become a Millionaire utilizing the Power of Multilevel Marketing and the Internet"

ORDER REPORT #4 FROM:

Brendon Jackson
13316 Cardinal Ridge Apt#C
Chino Hills, CA 91709

About 50,000 new people get online every month!

******* TIPS FOR SUCCESS *******

-- TREAT THIS AS YOUR BUSINESS! Be prompt, professional, and follow the directions accurately.

-- Send for the four reports IMMEDIATELY so you will have them when the orders start coming in because: When you receive a $5 order, you MUST send out the requested product/report.

-- ALWAYS PROVIDE SAME-DAY SERVICE ON THE ORDERS YOU RECEIVE.

-- Be patient and persistent with this program. If you follow the instructions exactly, your results WILL BE SUCCESSFUL!

-- ABOVE ALL, HAVE FAITH IN YOURSELF AND KNOW YOU WILL SUCCEED!

THIS IS IMPORTANT TO REMEMBER:

Every time your name is moved down on the list, you are placed in front of a DIFFERENT report. You can KEEP TRACK of your PROGRESS by watching which report people are ordering from you. If you want to generate more income, send another batch of e-mails or continue placing ads and start the whole process again! There is no limit to the income you will generate from this business! Before you make your decision as to whether or not you participate in this program. Please answer one question. DO YOU WANT TO CHANGE YOUR LIFE? If the answer is yes, please look at the following facts about this program:

1. You are selling a product which does not Cost anything to PRODUCE, SHIP OR ADVERTISE.

2. All of your customers pay you in CASH!

3. E-mail is without question the most powerful method of distributing information on earth. This program combines the distribution power of e-mail together with the revenue generating power of multi-level marketing.

4. Your only expense--other than your initial $20 investment--is your time!

5. Virtually all of the income you generate from this program is PURE PROFIT!

6. This program will change your LIFE FOREVER.

ACT NOW! Take your first step toward achieving financial independence. Order the reports and follow the program outlined above--SUCCESS will be your reward.

Thank you for your time and consideration.

1. Order all 4 reports shown on the list below (you can't sell them if you
don't order them).

-- For each report, send $5.00 CASH, the NAME & NUMBER OF THE REPORT YOU ARE ORDERING, YOUR E-MAIL ADDRESS, and YOUR NAME & RETURN ADDRESS (in case of a problem) to the person whose name appears on the list next to the report.

MAKE SURE YOUR RETURN ADDRESS IS ON YOUR ENVELOPE IN CASE OF ANY MAIL PROBLEMS!

-- When you place your order, make sure you order each of the four reports. You will need all four reports so that you can save them on your computer and resell them.

-- Within a few days you will receive, via e-mail, each of the four reports. Save them on your computer so they will be accessible for you to send to the 1,000's of people who will order them from you.

2. IMPORTANT! DO NOT alter the names of the people who are listed next to each report, or their sequence on the list, in any way other than is instructed below in steps "a" through "f" or you will lose out on the majority of your profits. Once you understand the way this works, you'll also see how it doesn't work if you change it. Remember, this method has been tested, and if you alter it, it will not work.

a. Look below for the listing of available reports.

b. After you've ordered the four reports, take this advertisement and remove the name and address under REPORT #4. This person has made it through the cycle and is no doubt counting their $50,000!

c. Move the name and address under REPORT #3 down to REPORT #4.

d. Move the name and address under REPORT #2 down to REPORT #3.

e. Move the name and address under REPORT #1 down to REPORT #2.

f. Insert your name/address in the REPORT #1 position.

Please make sure you COPY ALL INFORMATION, every name and address,
ACCURATELY!

3. Take this entire letter, including the modified list of names, and save it to your computer. Make NO changes to the

instruction portion of this letter.
Your cost to participate in this is practically nothing (surely you can afford $20). You obviously already have an Internet connection and e-mail is FREE!

There are two primary methods of building your downline:

METHOD #1: SENDING BULK E-MAIL

Let's say that you decide to start small, just to see how it goes, and we'll assume you and all those involved send out only 2,000 programs each. Let's also assume that the mailing receives a 0.5% response. Using a good list the response could be much better.

Also, many people will send out hundreds of thousands of programs instead of 2,000. But continuing with this example, you send out only 2,000 programs. With a 0.5% response, that is only 10 orders for REPORT #1.

Those 10 people respond by sending out 2,000 programs each for a total of 20,000. Out of those 0.5%, 100 people respond and order REPORT #2. Those 100 mail out 2,000 programs each for a total of 200,000. The 0.5% response to that is 1,000 orders for REPORT #3.

Those 1,000 send out 2,000 programs each for a 2,000,000 total. The 0.5% response to that is 10,000 orders for REPORT #4. That's 10,000 $5 bills for you. CASH!!! Your total income in this example is $50 + $500 + $5,000+$50,000 for a total of $55,550!!! REMEMBER FRIEND, THIS IS ASSUMING 1,990 OUT OF THE 2,000 PEOPLE YOU MAIL TO WILL DO ABSOLUTELY NOTHING AND TRASH THIS PROGRAM! DARE TO THINK FOR A MOMENT WHAT WOULD HAPPEN IF EVERYONE, OR HALF SENT OUT 100,000 PROGRAMS INSTEAD OF 2,000. Believe me, many people will do just that, and more! By the way, your cost to participate in this is practically nothing. You obviously already have an Internet connection and e-mail is FREE!!!

REPORT #2 will show you the best methods for bulk e-mailing, tell you where to obtain free bulk e-mail software and where to obtain e-mail lists.

METHOD #2 - PLACING FREE ADS ON THE INTERNET

There are HUNDREDS of FREE places to advertise. Let's say you decide to start small just to see how well it works. Assume your goal is to get ONLY 10 people to participate on your first level. (Placing a lot of FREE ads on the Internet will EASILY get a larger response.) Also assume that everyone else in YOUR ORGANIZATION gets ONLY 10 downline members. Follow this example to achieve the STAGGERING results below:

1st level--your 10 members with
$5.....$50

2nd level--10 members from those 10
($5 x 100).....$500
3rd level--10 members from those 100
($5 x 1,000).....$5,000

4th level--10 members from those 1,000
($5 x 10,000).....$50,000

THIS TOTALS ----------$55,550

Remember friends, this assumes that the people who participate only recruit 10 people each. Think for a moment what would happen if they got 20 people to participate! Most people get 100's of participants!

THINK ABOUT IT! For every $5.00 you receive, all you must do is e-mail them the report they ordered. THAT'S IT! ALWAYS PROVIDE SAME-DAY SERVICE ON ALL ORDERS! This will guarantee that the e-mail THEY send out with YOUR name and address on it will be prompt because they can't advertise until they receive the report!

AVAILABLE REPORTS

*** Order Each REPORT by NUMBER and NAME ***
Notes:

-- ALWAYS SEND $5 CASH (U.S. CURRENCY) FOR EACH REPORT. CHECKS NOT ACCEPTED.

-- ALWAYS SEND YOUR ORDER VIA FIRST CLASS MAIL.

Make sure the cash is concealed by wrapping it in at least two sheets of paper. On one of those sheets of paper, include:

(a) the number & name of the report you are ordering,

(b) your e-mail address, and

(c) your name & postal address.

PLACE YOUR ORDER FOR THESE REPORTS NOW:

REPORT #1 "The Insider's Guide to Advertising for Free on the Internet" ORDER REPORT #1 FROM:

US Investment Securities Services
1405 Cherry Rd.
Manitowoc WI. 54220

REPORT #2 "The Insider's Guide to Sending Bulk E-mail on the Internet"
ORDER REPORT #2 FROM:

Jon Camacho
19265 Powhattan Rd.
Apple Valley, CA 92308

REPORT #3 "The Secrets to Multilevel Marketing on the Internet"
ORDER REPORT #3 FROM:

ProNet
8160 SVL Box
Victorville, CA 92392

REPORT #4 "How to become a Millionaire utilizing the Power of Multilevel Marketing and the Internet"

ORDER REPORT #4 FROM:

Brendon Jackson
13316 Cardinal Ridge Apt#C
Chino Hills, CA 91709

About 50,000 new people get online every month!

******* TIPS FOR SUCCESS *******

-- TREAT THIS AS YOUR BUSINESS! Be prompt, professional, and follow the directions accurately.

-- Send for the four reports IMMEDIATELY so you will have them when the orders start coming in because: When you receive a $5 order, you MUST send out the requested product/report.

-- ALWAYS PROVIDE SAME-DAY SERVICE ON THE ORDERS YOU RECEIVE.

-- Be patient and persistent with this program. If you follow the instructions exactly, your results WILL BE SUCCESSFUL!

-- ABOVE ALL, HAVE FAITH IN YOURSELF AND KNOW YOU WILL SUCCEED!

THIS IS IMPORTANT TO REMEMBER:

Every time your name is moved down on the list, you are placed in front of a DIFFERENT report. You can KEEP TRACK of your PROGRESS by watching which report people are ordering from you. If you want to generate more income, send another batch of e-mails or continue placing ads and start the whole process again! There is no limit to the income you will generate from this business! Before you make your decision as to whether or not you participate in this program. Please answer one question. DO YOU WANT TO CHANGE YOUR LIFE? If the answer is yes, please look at the following facts about this program:

1. You are selling a product which does not Cost anything to PRODUCE, SHIP OR ADVERTISE.

2. All of your customers pay you in CASH!

3. E-mail is without question the most powerful method of distributing information on earth. This program combines the distribution power of e-mail together with the revenue generating power of multi-level marketing.

4. Your only expense--other than your initial $20 investment--is your time!

5. Virtually all of the income you generate from this program is PURE PROFIT!

6. This program will change your LIFE FOREVER.

ACT NOW! Take your first step toward achieving financial independence. Order the reports and follow the program outlined above--SUCCESS will be your reward.

Thank you for your time and consideration.

7135. Re: FRS Terrorism on Christmas Morning

Newsgroup: rec.radio.scanner
Date: 1999-12-27 00:00:00 UTC
From: F Barry Mulligan <70035.140@CompuServe.COM>
Message-ID: <847hiuqik1@ssauraac-i-1.production.compuserve.com>
Source record: 98700

tab-heavy@hotmail.com (night watcher) asked:
> CAn someone tell me what FRS means and what freq do they use ?

From the FAF - Frequently Asked Frequencies
on http://www.strongsignals.net/htm/oak_faf.htm

FRS - Family Radio Service [95.627]

Ch	Freq	Ch	Freq
1	462.5625	8	467.5625
2	462.5875	9	467.5875
3	462.6125	10	467.6125
4	462.6375	11	467.6375
5	462.6625	12	467.6625
6	462.6875	13	467.6875
7	462.7125	14	467.7125

The FRS was authorized on 06 June 96. It uses FM with a peak
deviation of +/- 2.5 kHz. Maximum power is 0.5w ERP.
Channels 1 - 7 are shared with GMRS.

Can't remember which channel is which but monitor the 482.XXXX
channels and you will find the police and fire dept. The 154.95 and
155.37 is intercity which is used to talk between agencies.

wrote:

>What exactly is it that CTCSS, DCS, LTR and DTMF coding is?

CTCSS = continuous tone coded squelch system: It's a sub-audible tone
used to prevent the radio user from hearing other users on the same
frequency provided you're tone squelched.

DCS= Digital coded squelch: Same as above but more numbers to chose
from.

LTR: Johnson's form of trunking using sub-audible data on a voice
channel.

DTMF = Dual tone multiple frequency: Same tones as your telephone
uses. As the name implies it's two tones at once. Also a 4th row is
used in some systems labeled A,B,C and D.

There are some risks to ordering from overseas. Still, you'll find many of the popular scanners in the U.S. are marketed overseas with the ability to receive 72-76 Mhz (sometimes in place of 30-50 Mhz.).

I'm curious what type of communications and where (general location) you want to monitor on 72 Mhz.?

Thanks,

Jeff Multer, Fort Mill, S.C.

Well I'm going to get an OptoCom In the beginning of the new year. It's
a "base" but you need a computer.

My investigation left me on the this decision because the Aor8600 is not
yet available and wont be for at least10+ months :-).

Allready use an Aor8200, MVT9000, PCR1000 and a Winradio. But i've not
gooten a good baseradio.

If I should just order today i would settle for at ubc9000xlt or a
ubc895xlt.

Just my 10 ?

Regards
Stephan

Hi All,
I'm looking for someone who is willing to do a swap or a px.
I have an AOR - AR3000A boxed less than 12 months old, no mods and a Yaesu VR500 handheld scanner less than a month old. I am looking for a Fairhaven RD-500VX.
If anyone can help please let me know!
Thanks.
Neil

7155. BC895XLT cellular modifications

Newsgroup: rec.radio.scanner
Date: 1999-12-27 00:00:00 UTC
From: Chris B <cab1971@bellsouth.net>
Message-ID: <qtN94.659$y11.4892@news4.mia>
Source record: 98720

Anyone have info on modifying a BC895XLT scanner to receive cellular freqencies. Just got one for xmas, and understand that one may be able to do this??

7156. Re: Keypad capacitance

I use 91% or 99% isopropyl alcohol (NOT STANDARD RUBBING ALCOHOL!), to clean most keyboard contacts. (try Drug Emporium for 91% and 99%)
Most keyboards these days use a conductive polymer ("rubber") as the contacts and commonly used keys tend to have a worn contact area on the surface of the rubber contact "sheet". (which are the flexible contacts on the keys and is one piece for the entire keyboard) Commonly used keys tend to loose their "spring" in the rubber which usually means a new keyboard.

Thanks for the info, now I have another question, who uses that type of encoding? I am considering purchasing a decoder, I thought first I should find out who uses this coding. What does this coding sound like on the reciever without the decoder? I have been into the electronics thing for some time now, but am fairly new to the scanning scene, I have been lurking and reading in the group for a while, but never see anybody talk about codes, so I thought I'd jump in. thanking in advance for all response, I can never learn too much. (unless it is mob related and I talk again, I dont need another leg broke)

Most larger book stores carry "Tune In To RF Scanning" by Kay,
and "Scanner Radio Guide" by Barker. Both are good references
for beginners. If you have a Radio Shack nearby, considering
stopping in and picking up a copy of Police Call Plus.

<<Anyone have info on modifying a BC895XLT scanner to receive cellular>>

As the New Scanner User's FAQ at www.strongsignals.net (which you should read) says with authority:

THERE ARE NO HARDWARE OR SOFTWARE TRICKS THAT CAN BE USED TO MODIFY CURRENT PRODUCTION US MODELS. PERIOD!

If you're really curious, scan the cordless freqs. You'll be bored enough soon enough, and that will cure you of this desire.

The local police in Boonville, Indiana decided to make a big case out of me having a portable "police radio" in my possession after holding on to the scanner for three months. I was out taking pictures of old cars in town when I heard on the scanner that a little girl had reported that some guy with a beard and dark curly hair had taken some pictures of her and was driving a blue car. I don't have any facial hair, no curly dark hair, in fact I don't have much hair at all, and was driving a green car. The main thing also was that I had not taken any pictures of any girl at all. I was stopped by the police and was subjected to questioning. I told the officer that he was stopping the wrong person and that I didn't have the dark curly hair, ETC. so he asked me how I knew that that is what they were looking for. I told him that I had a scanner. He tried telling me that it was a felony to possess one and that he could take me to jail. I informed him that it was not a felony and that the law stated that a police radio was defined as one that could "send and receive", he had to call in his sergeant who then had to go back to the station to look it up. I volunteered letting them view the pictures as the camera is a digital camera that you can review the pictures on.The sergeant came back saying that it was a misdemeanor unless I had a Ham radio operators license. I found out that I had misread the Indiana code and that it did say "send or receive". The Indiana code also said that there are other legal outs for having one and one of them is that you can have one in your possession while you are going about your lawful business. All of the other legal reasons for having one was ignored by them. I now have to show up in court to fight for my rights. By the way I e-mailed the governor and other officials in this state asking for help on that law but they haven't even bothered to reply. MY government at work.

Steve, I'd be careful about one more thing: Even if the amplifier is a
top quality item, you may end up overloading your radio and causing
more IMD, raising the noise floor even further...

The problem you really have is that the VHF transmitters used by Air
Traffic control are focused skyward, and they're not very powerful
because they have direct line of sight to the aircraft.

In other words, if you want to receive the air traffic control
signals, you may need a tower and some good height above terrain
before you'll hear much.

Hi guys,

I need some help in looking for a good base station scanner. i would like something with a "wide anf unblocked" frequency range. Also, it must be able to be used in conjunction with a PC, DTMF decoder, Opto Scout etc.

Can some of you scanner experts rec. a good unit ? I'm extremely flexible on price so it does not have to be an el cheepo. I'm really concerned with performance.

Thanks,

Joe

My PRO-37 keypad requires excessive pressure to register function. Is there a cure to correct this problem or is a new keypad the answer. Would a tuner cleaner extend the pads life?

How do you measure effectiveness? In this capitalistic society, I like to study the heads of successful businesses. The only common thread I find with these people is drive, creativity, objectivity and most important, common sense. If you have all of the above -and- two letters in front of, or three after your name, you're pretty much laughing. The fastest car in the world won't win a race if you haven't taken the time to push it to the limits.

I want to buy a scanner that can scan 72.000 MHz to 72.999 MHz. It must have a 50 channel programable and be a hand held. i don't care what else it does.

If anyone has a used one I'll probably buy it (email me a price and the model #)

If anyone knows what scanner I can buy new that can pick this freq up please tell me and where to buy it? I looked and can't find this freq on any set.

I know nothing abut radios so please don't get technical on me :)

--
Thanks, And please Email me a 'cc' copy of any reply so that I don't miss anything!

Sent via Deja.com http://www.deja.com/

Source record: 98788

I have an older version of Percon Spectrum, the first 32-bit release, and the new Police Call CD. They're just like scanners... none are perfect by themselves, but collectively, they do the job. They really need to come to some standard format with all this data, and computer controlled scanners. Or at least give us more powerful import/export tools.

That's what I like about Person's data, it's in *.DBF format, which works with FoxPro, or dBase tools, and you can really tweak the data, and form your own customized databases.

Lisa, first read the owners manual, find out where you live and begin searching for the frequencies. Enter the weather frequency for your area, it's usually the easiest way to become aware of how the scanner is programmed. Stop at your local radio shack and pick up the police call book, talk to the salesperson there and explain what you are looking for. Sometime they have a single sheet of frequencies for that area printed out and will give you one.

You should have given us the town where you are, there are readers in this newsgroup all over the country that are willing to guide you to a web site with frequencies.

Obviously the person got what he wanted. A reply to his message. Why not just ignore it? That would piss the person off, instead of making him happy by getting under your skin.

Stan
I had car antenna struck by lightning. The antenna is now a permanent part of the windshield (vaporized to windshield), lost two tires, blew the end off the antenna coax at antenna base but the radio works fine. Now, if my hearing gets back to normal. By the way wait till you have to explain to your insurance company what happened.

I hope someone here can help.

I have a pro-2006 (20-145A) and the backlit display is out. I managed to remove the "light part" of the display. I want to make sure what the voltage should be that feeds the "Electroluminecent Display" before I order the part from RS. It appears to be an AC voltage, but not sure what it should read. I assume this is a common problem with the PRO-2006, and was courious if anyone has the service manual that could tell me what the right voltage should be.
thanks

I have the above mentioned scanner and have the following questions.
1) I have found that the while scanning manually through all freq. the
following blocks are totally skipped.
a) anything less than 29.0000
b) between 54.0000 - 108.0000
c) between 173.0000 - 406.0000
d) between 512.0000 - 806.0000
e) between 823.0000 - 851.0000
f) anything over 958.0000
I am wondering why this happens and is there anyway to unlock these freq.?

2) Are there any computer interfaces that will work with this scanner?

Any help would be appreciated.

In the 900MHZ range does the base freq transmit both the Handset/base transmissions ?

For example, one may hear 2 sides on 901.800 and one side on 921.100.

Can someone explain the theory behind this ?

Thanks,

Joegizjr@aol.com

Glen caught it loony boy, and so did everyone else. The funny part is that these inadvertent slips carry more truth than 90% of your posts ya lyin' sack-o-sh*t.

Hey...I think one of the chronics just heaved his lunch in the hall. Better go grab the mop. Don't be late! Or you'll end up on the graveyard shift. Again.

Dont'ja think you oughtta be shuffling along there janitor boy?

I need ya to do me a favor; everytime you wrap your paws around a broom or a mop handle, everytime you lean into pushing one of those trashcans on wheels through the hall, everytime you don those rubber gloves to remove human excrement from whatever surface you're assigned; I want you to think of me. Think of me laughing my ass off at your miserable life. Full of mirth and chuckles at the stink of your existence. My only regret is that I'm not there to personally add to the filth and stench that is your job. But knowing that you wallow in that pitiful life fills me with such joy....I'll almost be sad when you finally figure out how to fire your shotgun with your big toe.

You friggin' loser

You friggin' loon.

How you organize scanner banks is a personal thing, more than a technical, or sometimes even logical one. While it is true, programming them in numerical order is supposed to increase the scanning speed, I don't think it's enough to worry about, especially if you have other ideas.

Typically, I choose one bank per city, as I live in an area where there are several cities within scanning distance. One intersection, about two miles from my house, four different cities meet! It's always interesting when something goes down, and you listen to them try to decide which police department is going to handle it.

I also group frequencies in some banks by the band, or service they relate to, ie: GMRS/FRS, 2-Meter Ham, Marine, Railroad, Medical/Ambulance, Aircraft, etc.

There are MANY insurance companies that will sell health insurance
policies to the self employed. For example, Kaiser Permante
will sell a single policy for $146 according to sales literature I
have that is about 1.5 years old. There are many other insurance
companies that have similar options.

> scenario where the self-employed - or not-employed - person may have a
> "pre-existing condition" that gets one's application immediately
> rejected by most health insurance providers.

Well OBVIOUSLY now is to late for the person of subject
to get health insurance. That would be like trying to get auto
insurance the day after the accident. However, had he obtained
health insurance some time ago he probably would not have had
any problems with the medical bills as he has now & will leave
for his wife to have to pay when he has passed.

The R2 seems like such a nice little radio. My question is, is the lack of being able to use AC a handicap? Seems like it would greatly increase the cost of the radio having to invest in a battery charging system.
Your input appreciated. Tnx!

Bill K9KZ

> world. They have no personal knowledge of the difficulties in acquiring
> health benefits as a self-employed person...let alone the possible

There are MANY insurance companies that will sell health insurance
policies to the self employed. For example, Kaiser Permante
will sell a single policy for $146 according to sales literature I
have that is about 1.5 years old. There are many other insurance
companies that have similar options.

> scenario where the self-employed - or not-employed - person may have a
> "pre-existing condition" that gets one's application immediately
> rejected by most health insurance providers.

Well OBVIOUSLY now is to late for the person of subject
to get health insurance. That would be like trying to get auto
insurance the day after the accident. However, had he obtained
health insurance some time ago he probably would not have had
any problems with the medical bills as he has now & will leave
for his wife to have to pay when he has passed.

SNIP

How sad that you have so little understanding of english grammar
that you have to use a simple typo-graphical error to support
your notions. The "I" should be followed by a "t" to make the
word "It".

If Bill Cheek had one dollar for every off topic post
bearing his name (including this one) then he would have
plenty of money to fight his cancer.

I've made a few, probably $20 or $30 bucks worth over the
years...maybe even $50..

John Mackey alone would have contributed easily $350 a month
for the past 4 years.

Judging from the amount of net traffic his name alone has
generated, we could have collectively raised a small fortune
for the treatment.

Think about it... what if you pledged to pay him a BUCK for
every off topic post you wrote containing the words "BILL
CHEEK"? How much would it be? Could you even afford it?

Someone here said that we should maintain a certain level of
honesty on this group. So how's this for honest:
Maybe those of us who would rather not contribute to the cause shouldn't
contribute to the off topic threads either.

As I said in the subject line: A thought.

We now return you to the regularly scheduled topic of
scanning.
-Phil

7269. FS: Radio Shack PRO-2022 $120-cell

Newsgroup: rec.radio.scanner
Date: 1999-12-28 00:00:00 UTC
From: watsons@aol.com
Message-ID: <19991228052620.23326.00001007@ng-ff1.aol.com>

For sale Radio Shack PRO-2022 200 channel desktop scanner, general VHF UHF and 800Mhz coverage in several bands. Can be operated off of 12v in car with seperate car cord (not included). Comes with original telescoping antenna and a photocopy of the manual.

The most notable feature of this scanner is it can be modified to receive the cell freqs and scan them in the proper 30 Khz spacing steps.

E-mail if interested, buyer pays for UPS COD shipping.

Scott

Bobccc,

After reading Snoopy's reply, I have to admit that buying a handheld with midband reception from a US source makes more sense than my idea.

Besides his choices, I would add the Icom R-2, which is a VERY small handheld that has gotten good reviews, and retails for about $200. It has 400 channels.

If you still wanted to check out the overseas route, a company called Javiation is the first to come to mind. They are in Great Britain, and advertise in the hobby publications. Their site is at: www.javiation.co.uk

They have the specs for the R-2 on their website, if you want to look over (again, though, that model is available in the US).

You might want to check with them about used scanners, if $ is an issue. The Uniden 100 XLT / 200 XLT series should fit your needs ... I believe both were made with midband reception, rather than low band, for overseas markets.

Thanks for mentioning the why you wanted to monitor 72 Mhz. In the Carolinas, there are still some highway patrol links between the state's dispatch facilities, and remote transmitters and receivers, using 72 and 75 Mhz. frequencies (including 72.98 Mhz.).

Jeff Multer, Fort Mill, S.C.

John mackey responded "Well said!" in response to the following post:

Mackey on the other hand has never helped anyone and is merely a parasite who gets his kicks out of acting like an asshole. That is the only way he can get attention. From what I gather, he isn't successful in his work or family life. Unlike Cheek, Mackey has never really helped anyone in this newsgroup and is something of a simpleton about scanning. His only reason for being here is to rant and rave about Cheek kicking him off Fidonet back in the dark ages of telecommunications. It goes back to this low esteem-failure thing. Look at the incredible volume of his postings here... His record speaks for itself.

All I can say is imagine what fun we'll have if Mackey should ever find himself sick, in trouble with the law or down on his luck in need of a helping hand!

It's called imaging. Your scanner is receiving images of 800 MHz cell phone conversations in the 450 MHz band. Images are common with inexpensive dual conversion scanners, especially if you use a preamp with your scanner or are close to a cell tower. I have a Rad Shack PRO-2056 mobile scanner that is prone to receive cell phone images in the 450 MHz band when I drive through a metropolitan area with a high number of cell towers. My Uniden BC800XLT does a good job of receiving cell phone images in the 450-465 MHz region also, but that's probably because the scanner is hooked to an outdoor antenna with a preamp.

Hi,
I think if the R2 was to be your only scanner and it was to be on constantly , then the lack of an external power source would be a problem. I use my R2 when I leave the house or sometimes for its searching so I do not find changing batteries a hassle. I usually have to change them every three days or so.
The R2 comes with a battery charger and two nicad batteries so the only extra expense was a second set of nicads.

No problem with me. It works all day on NiMH cells. I allways keep a set of charged ones handy. The radio is so small there is room in my pocket for spare cells along with the R2.

Amateur Electronic Supply <http://www.aesham.com> and Ham Radio Outlet <http://www.hamradiostore.com> have the Icom IC-R10 handheld receiver on special for about $300.00. This radio will receive 72.000 to 72.999 MHz plus much more, and it also has at least 50 channels.

As someone who watched a beloved relative suffer tremendous pain and eventually die earlier this year from cancer, I can tell that no one close to you has ever been stricken with this dreadful disease. I wouldn't wish that kind of suffering and death on my worst enemy.

I can also surmise that you probably have no one that could be considered close to you. That leads me to believe that A) your family has disowned you because you are such a butthole or B) your mother was a crack whore who left you in a garbage can and that you were found and raised by a pack of sewer rats.

Should you decide to respond to me, do me a favor, show a set of cajones and use your regular email address instead of taking the coward's way out and using that anonymous mailer. Shoot! What am I thinking. You were probably born without those also.

I thought that your question was an interesting one--one that I had never specifically set out to solve for myself but I realized that I had an answer after all.

Years of emergency preparedness work with the police department, Civil Defense, volunteer fire department, ham radio and Skywarn have caused me to organize my scanner frequencies according to task. This task-oriented organization can be defined according to what type of disaster/support we might be giving at the time.

My current scanner is an AOR 8000 and its banks are programmed as such: One bank for the local police/sheriff; one for the State police; one for the local airport; one for the local media; one for the local ambulance/hospitals, one for regional fire departments, and so on. Depending upon what type of event we are supporting I will link the appropriate banks together to form a more comprehensive coverage of an event.

We have hurricanes so I might link local law enforcement and a bank of support frequencies for the Red Cross and frequencies utilized by the Office of Emergency Preparedness. If an emergency is taking place at the airport the choice is obvious. For a major accident I might link local law enforcement, state police and the ambulance/hospital frequencies, and so on. For Skywarn work it is always interesting to monitor the state police and local law enforcement as they will usually report hail or other severe weather and this provides valuable information for a spotter.

If you're just monitoring for no reason (other than hobby) it may be interesting to scan all frequencies waiting for some "action" to happen. The choice is certainly yours.

Hope this helps.

I cannot believe the groos ignorance displayed in this ridiculous thread.

Apparently a few participants here have no concept of life in the real world. They have no personal knowledge of the difficulties in acquiring health benefits as a self-employed person...let alone the possible scenario where the self-employed - or not-employed - person may have a "pre-existing condition" that gets one's application immediately rejected by most health insurance providers.

What immaturity...I am pleased to note, however, that my earlier statement that the total number of those who have serious "problems" with what Bill Cheek has contributed towards the betterment of our hobby couldn't fill a corner table at Denny's ... hasn't been adequately countered by anyone.

Happy holiday season.

I am a news reporter with a local station. Recently the police have switched to a system leased from the telco to there own system. The old system, had a form of voice encryption, but it didn't work great. That made it easy to monitor communication, get to sites, and get good pictures. Now they have switched to their own Ericsson system using mainly M-RK radios on the same VHF channels. It's digital, and trunked (I believe this is called EDACS), and can not be momnitored by conventional analog scanners. They have told the us that they will make arrangements for the media, but it will not be in the form of portable radios (base stations) and will be limited to the dispatch channel. I also been told that there is equipnment available that can monitor Ericsson, but it is costly. The price does not appear to be a factor to the station I work for. Can anyone point me in the right direction for fnding equipment to decode these new digital radios?

I've got a Pro-2006 in great shape (except for the fact that the front "foot" is missing on the left hand side), with the mod to receive cellular frequencies performed. Works great, I like it, I just need to raise some money and its got to go.

$250, USPS Priority or UPS ground shipping included. I'm in Austin, Texas. Mail if you're interested.

Bill

THats a big problem with the PRO 2004-6 is the failure of the EL display. If you were successful in getting the panel out you can pick up surplus ones. If your careful you can cut them with a paper shear. The voltage is high...in the neighborhood of 100volts and yes..your right..it is AC. Be sure to "dope" the edges of the new panel as it should NEVER hit any of the pins on the display.....Kirk

7336. eBay inconsistencies: full 800Mhz scanners taboo, but illegal FRS radios and CB linears are OK

Source record: 98396

Just saw this on eBay:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=225319475

A GMRS handheld being marketed as an FRS radio with "twice the power" and "detatchable antenna."

Funny how eBay won't allow me to list my 1989 model, full-coverage scanner. They consider it a "prohibited item", even though no mention of "cellular" was made anywhere in the item description and it's sale is completely legal between private individuals.

Yet, they seem to have no problem with BLATANTLY ILLEGAL linear amplifiers being marketed in the "CB equipment" classification or 1-watt, detatchable antenna radios being marketed in the "Talkabout, FRS" category.

I smell a lawsuit brewing over this one.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

Yes! Go into the program's directory & delete the main executable file.
Rest your computer & run the WinScan software. The real (pay) version
will boot & ask you for the serial #. Enter in 7634FD87ZZ3, and you'll
be good to go!

>>value over time or will they just become obsolete and worthless as
>>newer technology (ie digital?) develops?

That's completely up to YOU, the owner/user. You're the ONLY one in a position to determine if your hardware is "obsolete" (I do hate that word...) or not.

The test is very simple. Does the hardware still do the job you want it to do? Is it easily maintainable/reparable, by either you or an outside service firm?

The most important question: Are YOU satisfied with your equipment's performance?

If the answers are 'yes' to the above, then I would not call it "obsolete." If you're not happy with how the setup does its job, then yes, it would be time to upgrade.

Example: I have a variety of computer systems here, and most of them would indeed be called "obsolete" by industry types. One of my servers is still running happily on a 486-66, and I have some other non-PC platforms that would make anyone afflicted with "Upgrade Fever" cringe.

HOWEVER... all the systems were cheap and easy to obtain, and they do the jobs I had in mind for them very well indeed. Why should I fix something that's not broken just to keep up with the Joneses?

>>I have about $1000 into my setup - I paid to get the CE-232
>>professionally built... ... and was thinking if I should sell it or
>>just keep it as the price will only appreciate as the items become
>>even more scarce or regulated?

I think it unlikely that you'll see much in the way of appreciation, money-wise. With most used equipment, the prices drop. There are some exceptions, such as Collins S-line radios which hold their value pretty well, and actually DO appreciate, or popular military surplus radios which are just plain hard to get.

I still run a PRO-2004. Works perfectly well for me for most stuff. I may ADD a trunk-tracker to my stash, but I'm not likely to get rid of the PRO. If anything, I'll add a discriminator tap to it and set up to monitor the local MDT's.

"Obsolete...." Heck, the WORD itself should be self-describing!

Well other than the problem with the low battery going off all the time no matter how NEW of a battery you stick in it it works great.. I've replaced ic9 and still no luck.. i'm wondering if one of the caps in that area are dying .. not sure, has anyone had this problem? I would REALLY rather not send it back to Radio Shack heh.. anyway, any help is appreciated.. :)

Try Scancat version 7.5.7. It will allow you to assign alpha tags to
talkgroups, and much more.

With a lot of "re-farming", trunking, etc. in the federal radio assignments, your best bet is a frequently updated website and links (like Rich Wells "Strong Signals"© at http://www.strongsignals.net/ or magazines like "Popular Communications"© and "Monitoring Times"©.

Both magazines should be available at any large bookstore, 'MT' has an ezine,
go to www.grove-ent.com

Hope this helps.

YES!!! for some of us sellers, eBay is getting to be very frustrating to deal with. As another example they seem to be only concerned about collecting the money from us sellers and do little to protect us from the buyers who run the bids up, only to never follow thru... but what the heck.... eBay still gets their featured auction/bold fees from me... to the tune of about $17 a pop!! I am patiently waiting for some of the other auction sites to get the activity of eBay so they will straighten up their act.

Audio oscillation is often caused by the audio output capacitor
going bad. It's usually an electrolytic cap in series with the
audio output and speaker.

Sorry, I don't have a PRO-64 schematic.

One thing is, don't run up red flags on e-bay. I've seen quite a few scanners listed there with "cellular" in the title. Why would someone do that, when they KNOW they'll be zapped? If folks keep it up, we'll have to list scanners by SKU number. The management over there doesn't WANT to keep yanking listings, so why give them a reason to? They aren't communcations lawyers, so a certain amount of ignorance is acceptable, but when you put up buzzwords that got 'em in trouble before, they'll see that.

Anyway, a GMRS radio CAN have a detachable antenna, and IS more powerful than FRS. The license isn't exactly hard to get, either.

That was exactly my experience and mine went back, as well. I'll admit
to ahving pangs of regret when using a conventional scanner without teh good
sensitivity and other bells and whistles featured on the 92, but the truk
tracking was so poor (it exists in name only) that I couldn't justify keeping it
as (yet another) conventional scanner given the price. Now, if I were to sell
the 200 XL, one or both of the PRO-30's, the R-1, etc. ...

You guys are about as smart as a stump....How many people saw the
listings before they were pulled...10,000 or 100,000...with the email
address of the seller available to all..the unit was sold off line with
no fees to eBay. Remember the big advantage to ebay is the VOLUME of
exposure...thats why the prices are high..there is always two or more
that just-have-to-have what ever you are selling, when you get to so
many people you will find those two or more.

Tryu the codes listed for Sony devices. I had a Universal remote that
worked my R7000 that I went thru codes with and finally got to Sony and
one of those codes worked the volume at least. I should have started at
the end of the list....

It's people (and I use the term loosely) like you that drive up the
cost of software for everyone else.

If you want WinScan to be active, you can bloody well pay the FAIR
price just like the rest of us. TAANSTAFL!!!

Sheesh, some people...

Three in 24 hours, no that is another Toilet-Bowl lie.

> Does that mean it is all true?

Not if you said it Toilet-Boy. Most everything you say is a lie. Don't ask me, ask most anyone on the NG. Want to test it Toilet-Boy? Go for it. You already know the outcome. You lose again Liar-John.

Nice thing about you Toilet-Boy....you know you name and come when caled.

Right John-Bowl

BTW...What about those medical credentials liar-John? You seem to have been proven a liar again and nothing but a bed-pan changer.

The test for this is "ask the clerk to hand you the radio, for a second. Try entering 870.000. " If the scanner accepts this , you have an "open " radio. That works on any brand of scanner.

In addition to what has been posted, the R2 is really awkward to use because it is so small. You MUST have the interface to program it, other wise it is just too impractical. I wouldn't want it as my primary handheld. The Yupi is a really nice scanner--easily the best in its price range. Great features and sensitivity too. No PC programming however and that is a major drawback with a 1000 channel scanner, I think.

Radio-Shack Realistic PRO-37 Scanner For Sale.

It's a Top of the Line Portable Scanner that covers UHF and VHF Bands from 30-54 MHz and 108-174 MHz and 380-512 MHz and Cellular 806-960 MHz.

You can program 200 channels into it, and it has direct-entry of frequencies.

It can scan 10 groups of frequencies, one or all, as you wish, or you can enter the frequency manually if you prefer, or choose the frequency you want to hear from the 200 you have entered into it.

It measures 6.5 inches high by 2.75 inches wide by 1.75 inches deep.

It is in As New Perfect Condition, no scratches, and was used only one year.

$199.00 plus shipping.

Contact: bellavance@videotron.ca

Message-ID: <2Fna4.1$x5.1498@news.aloha.net>
Source record: 98448
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc,alt.radio.scanner,rec.radio.amateur.equipment

I have purchased a Pro-94 a couple of days ago. I think its a decent radio for the price.

However, after using it for the past couple of days, it seems to me that the Audio Electronics of this radio isn't that good, but rather poor compared to other scanners I have. And the data skip feature doesn't seem to work very well.

I think the best thing about this scanner is its ability to track different types of Motorola Systems as well as EDACS, provided they are running in analog mode.

I hope this info is of some help in your decision.

I had the 92.... GREAT conventional radio, SORRY trunk tracker, so I returned it and picked up the 94. The 94 was *nice*, but I found it was not quite as sensitive as my old 235. It also seem to have major problems rejecting intermod, so back it went. I then got the 245 and WinScan with the extra money from the original 92. I'm happy now; great sensitivity, great intermod rejection, and computer control capability. Its only down side is the 300 channels compared to the 1000 channel (actually 2 *independent* banks of 500) 94; BUT, with the computer control, different channel configurations can be exchanged in *seconds*. Just my experience.

There should be no problem at all. I lived there for 25 years (finally getting out in '91) and had
a scanner in the car starting in '77. Just put it in the cab of the truck - either up next to the
rifle in the gun rack or down on the seat next to your spit can. Don't be surprised if all your
friends desert you because you're now smarter than them.

:o)

I'm thinking about putting together a software package for sale on the internet thought I'd run it by you guys before I put forth the effort.

Would you pay for a piece of software that provided:

A searchable database of every FCC licensed transmitter within a 25 to 50 mile radius of any location you specify in the US?

A zoomable, detailed map showing the tx location of each entry in the database?

Full contact information for the licensee including street address?

Frequencies covered would be 20Mhz to 1 Ghz

The software would run on Win95 and would be well written and intuitive.

Any feedback would be greatly appreciated.

Feel free to suggest a price, or anything else that would make it worth buying to you.

You can email me at
htek2000@aol.com

Thanks,
Jim Humphrey

From what I have read the Pro-94 was a bunch of great features built on a radio that just did not work very well for trunking.

The 245 was the first of the second generation of TrunkTrackers to appear (as was the 235 was the first of the first generation) and set the standards. While it has some blemishes, it came out of the gate fast and most people really liked it.

When the 92 came out it appeared that the trunking mode was some sort of afterthought and it just didn't work as well.

The 94 seems to be a Radio Shack "Pro-2026" style clone ("Take the good Uniden features out, insert the bad Radio Shack features" as I wrote in a review of the 2026 a few years ago).

Radio Shack seemed to really set the standards for scanners when they came up with a bunch of good GRE radios including the 2004/5/6 and the Pro43, but the Uniden clones are a more expensive lobotimized version usually. The Pro90 is the exception, it was the same radio with only a single battery pack.

I have a 245, and I love it. I have also used a couple computer driven solutions to EDACS and Moto trunking. I played briefly with a 94 and a 92. If the 92's trunling was as nicely implemented as the 245's I may have bought one. But I need accurate talkgroup ID's.

Two way radio is always evloving, as is any facet of consumer electronics. But the thing to remember is that the same rules apply to the users of radio that you want to listen to. Police and government operations, business's, and others that you listen to need to spend money to get the new features and capabilities that digital and other new technologies offer. It won't happen overnight.

20 years ago we were all frightened by agencies moving to UHF and then 800 MHz. Eventually Bearcat, Regency, Robyn, etc. came up with scanners with these new freqs.

10 years ago we were all frightened by the migration to trunked systems. Now we have that technology and these systems actually make it easier for us to listen to many agencies. Now we can hear the mobiles, selectivly discard uninteresting communications and follow the action via our TrunkTrackers.

Now it is the digital modes that frighten us. Within a couple years we will have digital mode scanners (with any luck) and we will be in the same situation as before.

The extensive setup you have will still be useful for years to come.

Look people if you buy the betty bearcat scanner book for about $10.00-$25.00(depending) you can get the scanner frequencies for all 50 states, Canada and Puerto Rico. I bought one back in 1995 and still use it today although I have found some errors in them it is inevitable considering that the book is only 2 inches thick.

Depends on the price. Much of the information you talk about is available on the web free. I've been a VC++ programmer since the beginning of VC++ and I don't know if you would recoup the dollars by writting a piece of software to do what you mentioned.

You would be better off to setup a website which could give all the above data free of charge all from one website. Then charge for others to advertise.

Just some thoughts.

OK AOL Users
The program I am about to send you to gives you a list of police codes
Not to codes
Like when they say:
"We have a 65 on Elm Street"
It logs them so you may print them to
First go to keyword:Download
Then go to ,software search and type scanner
Be sure to check all boxes and just run down it for scanner programs
"Dragon"
"Bluedevil"

The scanner is not designed "blocked" so there is nothing to "restore" or
unblock" to get direct entry/display of cell freqs. It just can't be done.

I'll heartily disagree with that. I've programmed nearly all the
memory channels, all the band limits, PL tones, etc and have
never used the PC interface. I've got the whole beast memorized
and no longer rely on the poor manual. Since I have more than
one handheld to work with and remember details about, I should
think that most people would be able to handle this one radio
with just a bit of effort.

Cross-posted to: rec.radio.scanner,rec.radio.scanner

Has anyone had any trouble with their Sportcat 200. I am particularly having trouble with the radio stopping on channels that are L/O. I've even heard traffic on channels when the entire bank is off.

For example with bank one open I scan channels 1-6, 9, 10, 13 and 14 and lockou the remaining channels in that bank. No matter what I enter in channel 20 it ignores the L/O and stops scanning on that channel.

Another example is when I open bank 3 (so 1, 2 and 3 are open) I get trafic on channels stored in bank 4.

Has anyone seen this?

7412. Need Pro-64 Internal Info

Newsgroup: rec.radio.scanner
Date: 1999-12-29 00:00:00 UTC

Message-ID: <84dqnm$9h9$1@nnrp1.deja.com>
Source record: 98481
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm looking for a block diagram or a schematic for a Pro-64. Mine has acquired a problem that I don't understand, and I'm trying to eliminate possibilities.

When I first turn it on, it squawks instead of playing audio (possibly some sort of oscillation). The RF section seems OK -- it scans properly, and stops on signals. It's quiet while nothing is being received (when the squelch is on), but when the squelch opens it just squawks. After a few minutes (5 to 15 minutes) this stops, and it behaves properly.

I can't figure out what would be changing its behavior after operating for a while. I know some ICs can become temperature sensitive, but I don't think the temp inside the scanner changes all that much during operation. There is a small battery (or maybe a capacitor) that doesn't look quite right. (The plastic outer covering seems discolored.) Perhaps it's not holding its voltage well and it gets recharged when the scanner is on.

Any info would be appreciated!

>

The Current Uniden BC-245XLT's have a BAD firmware "bug" in them.
This is not really a "bug", but word has it that Uniden included
the wrong version of F/W in the first production run and the
bug was "fixed" before production started, but by some mixup
the older (with bug) F/W get sent to mass production.

When scanning both Trunked [MOTO] and conventional system systems
or multiple trunk systems, there is a 5 second delay at least,
maybe more... The current trunk must go complete IDLE for 5 seconds,
and the 245 will take one swing through all the other conventional
freqs (or goto another trunk). WHen on a trunk again, it must
stay for 5 sec of IDLE time before it even looks for conventional
for the 2nd time, etc..

If you have pretty busy trunk system, your BC-245 is pretty much
a BC-235, since 99% of the non-trunk traffic will be skipped.
Rumor has it, that Uniden will make some sort of announcement of
this "trunk delay" bug in Feb '00.

You are unlikely to find any universal remote that has such a specialized device in its pre-programmed IR library. Even Universal Electronics (makers of the OneForAll series) who has the world's largest IR database, does not cover scanners or shortwave sets.

The best bet is to buy an inexpensive learning remote that does not "forget" when the batteries die (like the OneForAll Cinema6 or 7; or the Radio Shack equivalent [#15-1994]), and send it to an R-7000 owner to teach it the commands from the original ICOM remote.

We have multiple units so the PC interface really helps keep all the radios programmed the same. Whereas it is easy to become familiar with any particular radio, having a variety of radios and multiple units of each one is a good reason for using the PC interface.

This is just another consideration I didn't hear anyone mention.

One freq is both the other is cordless user only. Your wireline (non-cordless) phone works the same way. You talk into the mouthpeice and that sound alone is sent into the phone. The phone then outputs your voice as well as the caller's voice. This is acheived by using 2 frequencies on a cordless or cellular phone.

However, any funds you raise could be donated to purchase an independent assessment of Bill Cheek to access wether he indeed has need for monetary assistance.

7449. An intelligent(?) set of questions about Pro-92,Pro-94, BC245, and trunktracking

Newsgroup: rec.radio.scanner
Date: 1999-12-29 00:00:00 UTC
From: mp <mplanck@my-deja.com>
Message-ID: <84cda6$9qr$1@nnrp1.deja.com>
Source record: 98633
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc,alt.radio.scanner,rec.radio.amateur.equipment

Hello!

My local PD just went to a trunked system. So now I find myself thrust into the world of trunktracking. I always like to take a minute to see what products are out there before I buy a new radio, so I tried to take a look at what was available in trunking-compatible scanners. What I came up with was: The Pro-92, the Pro-94, and the BC245.

PRO-92
I *REALLY* liked the Pro-92 and was all set to buy one until I found the gobs of complaints about it on this newsgroup, among others.

=====PLUSSES=====

-Alpha tagging

What got me excited about the scanner was the 12-digit alpha tagging. It has been a pet peeve of mine for years that, with anything beyond my 16-channel scanner, I found it impossible to even begin to memorize what channel went with what service. Yes, I know that a lot of people use their scanner's banks to organize their frequencies, which sounds nice in practice. It never works for me, however (for a variety of reasons). The only radio I have with alpha tagging is the Yaesu FT-50 (I am a licensed Ham radio operator...) modified for extended receive frequencies. The FT50 has only 4 digit channel naming (which is practically useless). 12 digits would be perfect. This one feature justifies the high price of the scanner for me.

-CTCSS-PL/DPL
My FT50 has PL/DPL also and I never quite got around to using it. With the Pro-92 it would be great, because those 'multi-user' frequencies could be stored as two seperate entries, if, say, the municipal sanitation department and the local highway department shared a frequency but used different PL tones I could program- "garbage truk" in channel 30 with PL 162.2 hz and "Hiway dept" in channel 31 with PL 173.8, and always know who I was listening to. These two features seem to compliment eachother nicely.

=====MINUSES========

-Bugs
I have seen MANY complaints about the Pro-92. The main one seems to be caused by how the scanner works. Please keep in mind that I know almost nothing about trunked systems but from what I've read here and

on several websites, the Pro-92 uses tonebursts at the beginning of the received transmissions to follow conversations while the others actively monitor the data channel all the time.
What do the 'real' radios use to stay in synch with the trunking system? That is, what do the real trunked mobile and handheld walkie talkies being used by the police and others listen to? It seems that to listen to the data signal while receiving another 'audio' signal would require almost two seperate receivers in one case, whereas listening to tone bursts on the frequency being monitored would allow a radio to be designed more simply (and produced more cheaply).

-Data skip
From the sources I've seen the Pro-92 has no "data skip" feature.

=========About me=========
Here come the questions, hopefully someone who knows more about these scanners and trunktracking can help me analyze my situation and offer their suggestion as to which scanner would be best.

Things I dont care about:

-Battery packs. Much noise has been made about Uniden's proprietery battery packs. I couldn't care less. I mostly use the scanner while I'm sitting here at the computer so it's plugged into the outlet. If I want to use it in the car I'll use a car cable. I rarely carry any radio clipped to my belt.

-Price. Well of course price is a factor but I've already comitted to purchasing a trunk tracking scanner and the price difference between the Pro94 and the Pro92 is fortunately not that big a deal to me at this time.

-Brand loyalty. I realize that the Pro 94 is made by Uniden, the Pro-92 by GRE. I really dont care where the scanner comes from. I'm not buying an extended warantee or anything so being able to return the radio to my local Rat Shack isn't a point of convieniece for me.

Confusions: (I'm not sure about this stuff)

BC245/PRO94: At first I thought that the Pro-94 and the BC-245 were the same radio, in different clothing. But then I found out the following (which may or may not be accurate):

The 245 scans conventional and trunked comms at the same time while the Pro-94 does not.

The 245 has some problem with too few channels per trunk?

The BC245 has 300 channels while the Pro-94 has 1000.

Is there a newer version of the 245?

====What I want====

As I mentioned, my local Police Department moved to a trunked system and I'd really like to continue monitoring them. I don't know anything about trunked systems other than the basic concepts of why they exist and a rough idea of how they work. However I am a radio amateur and a student in Electrical Engineering so I guess I can probably pick up on this aspect of the hobby relatively quickly.
Initially, the police department was the only target I intended listening to, but as I gathered more information, I found that other local services were already using a trunked system along with their conventional frequencies. So, here are the things I am trying to keep in mind while deciding what to buy:

-What kind of trunking system am I on? That would be a good thing to know, wouldn't it? I think the PD that I am interested in is on an EDACS type system. (See below for more information on my local system) I'm assuming that all of these scanners work on an edacs system. Furthermore- it seems as if the problems with the Pro-92 trunking involve tracking Motorola type systems. True? From the information below, are the trunked systems close to me all Edacs, or could some be Motorola, or is there no way to tell from the information I've found?

-Data Skip. From what I've read, all Edacs systems have that annoying four beep signal after each transmission. I have observed this and also there is a buzzsaw sound that I hear from time to time (when I try to listen to the system on my conventional scanner). I hear that some systems have MDT or other data transmissions popping up from time to time as well as special 'scanner busting' signals (although it seems to me that this is probably just trunking data). You can see...

http://ourworld.compuserve.com/homepages/brennan/gwiz.htm

...for .wav files and more in-depth information about this. Anyway, the Pro-92 does not have a 'data skip' feature. Am I doomed to scaninng failure if I try to use a pro-92 and there are non-voice signals appearing on the trunk I want to monitor? From what I've found, the Pro-94 and BC245 DO have a data skip feature. Is it robust enough to really skip over unmodulated carriers, MDT and other data, etc?

-Computer cable/control: Wow, this is a tough one. I think that computer interfacing is very important, yet I have found the least amount of information on this aspect. It seems as if:
The 245 comes with a computer cable
The 94 has a port but the cable and software are $70 extra
The 92 has no computer control abilities?

Exactly what can be computer controlled is unclear. A lot of times a computer interface is offered and all it does is allow you to program channels into the scanner in an automated fashion. While still very useful, this is not real computer *control*. I found one message that refers to WinScan software, a $60 package, at:

http://mghusa.com/pozilla/wsabout.htm

where you can find software to computer-control the BC245...an important side effect is that you get ALPHA TAGGING (on the computer screen only, of course)! As I said, I do most of my scanning right here by the computer so this may be a decision tie-breaker for me. I also saw a message referring to "Canadian freeware" that does the same thing as the WinScan software. I dont know if this referred to the crippled demo version of WinScan.

As for the Pro-94, all I can find is that there is a computer cable and software available for an additional $70 or so.

It has been my experience that a lot of times these 'computer cables' are overpriced and easily built at home. A lot are just straight cables that run to the serial or parallel port. Evidence: my digital camera, Optoelectronics Xplorer, HP48 calculator, and many other 'toys' cluttering up my desk all use a 'plain' cable- no electronics, just wires. On the other hand, some cables have internal electronics- the computer cable for my TI-92 calculator has a bunch of (SMT) electronics, (although a homemade version is available) the programming cable for my Yaesu FT50 has internal electronics, (a homemade version is possible here also), and a cable for a cellular phone I own also has internal electronics. Someone even came up with a computer interface for most scanners that do not currently have one (ProGrammit- allows you to program channels by emulating keyboard presses). In all of these cases, there is a homemade version of the cable that you can build- and when there are elecronics inside the cable, it has been simply a level converter, which can be accomplished with one chip.

This begs the questions:
Are there homemade equivalents of the Pro-94 cable?
Will the utilities for the BC245 work with the Pro-94? Or are they too dissimilar?
Is there an interface hiding inside the Pro-92 that can be developed by a hobbyiest?
It seems odd that Uniden would go thru the trouble of creating two seperate but similar radios, one for themselves and one for Tandy.
I've seen similar products like this before where a few internal jumper settings can change one product into another. For example, I have a caller ID box that can go from the cheapie $20 unit I baught to a $40 unit that has triple the memory slots just by removing a solder blob.
Does anyone think that the Pro-94 and BC245 share a similar relationship?

-Channels
More is better, obviously. However, I will probably be using two scanners simultaneously at the beginning anyway, one for conventional systems and the new one for TT. So if there is one TT scanner out of the bunch that seems perfect but it does not have a lot of channels, I will probably just end up dedicating it to TT and keeping an older one for conventional frequencies. How do the TT scanners store trunked channels anyway? Does each frequency take up a channel or does each 'talkgroup' take up a channel or what?

-Attenuator
I have never had a radio with an attenuator. I use a discone antenna in my attic (not on the roof) and I am near paging transmitters as well as a NOAA weather transmitter. I hear the NOAA announcer all the time, on many different frequencies. I wonder if an attenuator would help me and if it's important to be able to have it set for each channel or "all or nothing".

-The Delay "issue"
People have complained about the 5 second delay of the BC245 and Pro94. I read one posting that said that the delay is necesary because the scanner needs to listen to the data channel for this long (to do what?). Im not sure when this delay occurs and how annoying it is. It seems that the Pro-92's method of trunktracking is different and does not involve a delay of this type, however this method also misses a lot of replies... Can anyone clear this up once and for all or point me to a website that clearly explains the issue?

======Conclusions===============
So, you ask- what do I want to know? Well, I'd like your thoughts on which scanner you think would best serve my needs and why, and:

-Will the Pro-92's problems be a non-issue for me because I am scanning Ericsson and not Motorola trunks?

-Will the lack of a Data Skip cause me problems?

-Will RadioShack release a fixed version of the Pro-92 and make whatever I purchase obsolete? (Rhetorical question!)

If there are any other scanners that I should consider (TT capable of scanning edacs systems only, handhelds preferred but bases are acceptable if they are not just 'base' versions of an existing handheld radio) please feel free to mention them.

Thank you for taking the time to read this message. I look forward to receiving replies from the many knowledgeable users in this newsgroup.

======INFO===
Here is the information about my local system. Please see:

http://www.nf2g.com/scannist/nys_ege.html#Kingston

The system I want to listen to is lableled "NYCOMCO" but I'm sure I'll eventually want to listen to the Kingston system as well. Can you tell from looking at this chart what kind of system this is?

http://community-1.webtv.net/rks-57/UlsterAndOrange/page2.html

This guy really helped me out. His page shows the specific tower that I want to scan, he says the police department I want is on the Poughkeepsie tower and he gives me their "Talk Group ID". Can I scan just this ID and listen only to transmissions from this police department?

Sent via Deja.com http://www.deja.com/

Source record: 98636

Anyone have experiences to share with the Grove Omni II (ant5)? I'm considering picking one up to put in my closet in my apartment. My main monitoring subject is the local 800MHz trunked system (~851-870). I live in downtown Seattle, but my apartment seems to be fairly well-shielded to RF, so my reception on those channels can be iffy (I haven't actually figured out the factors yet; 75% of the time it's crystal clear and every so often a conversation will be especially staticy. Dispatcher included. Even for incidents within blocks of my apartment). I'm also interested in being able to monitor other frequencies, so I wanted to stay away from something that would do only 800MHz well. And I'm working within the limitations of having to have something that will be *in* the apartment and relatively unobtrusive. There are rules against hanging stuff outside the windows (and I'm on the ground floor facing a downtown street, so that wouldn't be such a hot idea anyway), so solutions that require that are pretty much out of the picture.

My current main scanner is a RS pro-2050 with the stock antenna.

The Omni II looks to fit my space requirements quite well, but I've had a hard time finding any info about the performance it may give me. So, any thoughts on this unit?

TIA.

sean

Just take it to your local FCC field engineer, which in many cities is in the same building as the us attorney and the FBI once you have the FCC field engineer modify your radio he will be happy to take you down to the justice department so they can book you for violating federal law.

Why any one wants to listen to cell calls is beyond me! I would think unless you are trying to get the goods on someone they it would be a waste of time and incredibly boring. Of course if that's your bag then that's your bag, Don't get caught, and don't mess it up for the rest of us who are trying to stay legal. (and who have no interest in cell calls)

Oh what the FCC field engineer will do will be to solder a jumper wire between pin 1 and 2 of the 7812 chip on the circuit board. Try it. I understand it does wonder for the radio.

R2 doesn't have SSB, and is smaller than a packet of fags. MVT-7100 is the
size of a brick and has got
ssb, but I'd rather use my HF receiver DX-394. R2 has pc clone capability,
don't think the mvt-7100 has
You can use an AC power adapter on the mvt-7100 you can only use cells with
the R2.
Both scanners are good. I got the R2 'cos it small and neat.

>
>TIA
>
>Lynn

Lynn,
I own a BC147XLT, which I believe is similar to the 148XLT. As far as programming is concerned, all you do is enter the frequency which you want to store in a given memory channel using the number keys on the scanner's keypad and then press the "enter" key (it should be marked "e"). To access a specific channel, just press the number of the channel you want to access on the keypad and then press the "manual" key.
If you want a copy of the operating manual for your BC148XLT, you can probably order one at Uniden's web site:
http://www.uniden.com.

In fact I did get my adapter from Radio Shack. I decided on the fancy model
with switchable voltages so I could use the same adapter with my other
handhelds and accessories. I don't have an RS# handy but I don't think you'd
have any trouble finding it.

Most analog 900mhz cordless phones work the same way the low-band ones do.

Base frequency transmits both sides and handset only transmits the local
side.

Andrew

I'm looking for info (operation manual info) on an old Bearcat / Electra
BC-260, ie wiring connector info, control panel functions, specs., etc.
Anyone out there have info on this unit or know where I might be able to
find it.
As much as I don't like Radio Shack or their products, at least they have a
web site that has on line manuals still available for almost every scanner
they made. Does Bearcat or Uniden have a similar archieve of info ?
Please post or send any info.
TIA

7481. Resetting the HS200?

Newsgroup: rec.radio.scanner
Date: 1999-12-30 00:00:00 UTC
From: Richard W Cowgill <lakers34@netscape.net>
Message-ID: <84fd4m$j3v$1@fir.prod.itd.earthlink.net>
Source record: 98265

Anyone know of a keypad press mod or some other way to reset or initialize a Relm HS-200? I just picked up a very clean one last week but at certain times its 800 mhz reception is weak and very garbled...almost sounds like its receiving in AM or WFM mode (which I don't think this unit can receive in)...I believe this unit configures itself automatically for AM or FM with no manual switching... If I turn the unit on/off or depress the TN button once or twice, it pops back to normal reception, which is very good... The CTCSS for all channels including 800 has been left at 0.0 so I don't think that's the problem... Any ideas??

thnx,
Rich

7482. JVComm32 Version 1.0

Newsgroup: rec.radio.scanner
Date: 1999-12-30 00:00:00 UTC
From: PhilPerkins <phil@pervisell.com>
Message-ID: <386B3B7A.834CC2D5@pervisell.com>

The very latest version of JVComm32, by Eberhard Backeshoff, can be downloaded from our website.

http://www.pervisell.com

If you have already registered this program, then this is the latest update, otherwise this is a fully working demo program for SSTV and FAX which runs under Win95 and Win98.

Winscan is aware of the problem , I bought it and the alpha tags display but not consistently. They issued a
patch 1.1 but that didn't solve it and are supposed to issue another patch in January, or so they told me.

This message seems to have started all this Cheeks crap:

" I fully realize that this has been kicked around a time or two,
but I did want to remind everyone that Bill's lung cancer, nor
it's associated bills, certainly won't go away by themselves.

Anything anyone could do in terms of send a few dollars
or whatever I'm sure would be greatly appreciated and most
certainly is greatly needed. The chemo treatments alone
are about $10,000 each time Bill receives them. These kinds
of financial liabilities certainly won't go away on their own.

The amunt of help and assistance he's provided the
scanner community in these past many years can probably
never be repaid. Including the excellent free advice that Bill
gave on almost a daily basis. He's been extraordinarily
generous to the scanner community. I'd like to believe
we can also be generous."

Do YOU mean to tell us that since cheeks was in the Navy all his
medical is covered?????

Then all this "cheeks needs $$ for medical" is crap??

It figures.

This was copied from the Monitoring Times web site, it clearly shows them asking for people contribute toward medical expenses:

"An appeal to Monitoring Times readers and friends of Bill Cheek: For much more on the legal case and an interview with Bill Cheek, link to the article, "Bill Cheek's Last Stand," in the San Diego Reader at http://www.sdreader.com/ed/city/arch/C102199.STM Bill Cheek, editor of the "Experimenters Workshop" column in Monitoring Times and author of a series of books on scanner modifications was just diagnosed with incurable lung cancer at the end of September. If treatment is not begun aggressively and rapidly, doctors give him about 3-4 months. Bill says, "research on lung cancers is ever on-going ... My doctor said that even a year ago, my case would not have been treatable at all. Now they can offer me a 4-6 months extension." The problem is, Bill does not have medical insurance. He is self-employed at Comtronics and has two daughters in college. Furthermore, charges brought against him in a New York federal court last spring -- related to his scanner business -- are currently being heard before the Grand Jury. Bill intends to fight the cancer, but he could use your help. Bill welcomes your prayers on behalf of him and his family. If you have knowledge or feedback on the latest cancer research and developments, Bill would appreciate hearing from you.

Expressions of concern are welcome, but he'll have little energy for personal replies. You can also help with your contributions. A trust fund has been set up by friends and family to which you may contribute toward medical expenses. Here are the details: Contributions for Bill Cheek can be made through Union Bank of CA. Checks can be made out to either:

> Bill or Cindy Cheek
> Cynthia Cheek trustee for William D. Cheek, Sr.

Funds should be sent to: Union Bank of California Acct# 0771354719 8359 Mira Mesa Blvd San Diego, CA 92126 Attn: Rhonda or Kevin Smith (619) 230-3800 OR Bill and Cindy Cheek PO Box 262478 San Diego, CA 92196 Though always a controversial figure, there is no disputing the fact that Bill has devoted his life to the love of radio and technology. We at Monitoring Times ask that you give this appeal the widest circulation among your radio friends. As fellow hobbyists, let's show our appreciation by giving generously."

I sincerely doubt that the VA covers all costs of Mr. Cheek's treatments, etc. An in-law of mine who is a Korean war veteran is suffering from a life threatening disease. If he had to rely on the VA for all his treatment, prescriptions, etc., he would be dead by now. I forget the name of the movie that dramatized the ineptness and bureaucracy of the VA, I think it was something like "Article 99". However, that movie was a lot closer to the truth than a lot of people would like to believe. One of this country's biggest shames is how we treat those who served in the armed forces.

> anyone know about the raid at ramsey electronics ?

See Ramsey's special web page dedicated to this wonderful event.

http://208.46.148.11

Keep in mind, this is Ramsey's version of the events. Not that I'm a believer in everything the federal prosecutors say and do, but you're not dealing with an unbiased third party's version of the events.

That said, John Ramsey's version of the events seem frighteningly realistic and plausible.

I have been a Ramsey customer in the past. Frankly, I find their kits to be poorly designed. Even their better products often have some very dumb oversights, such as a low power FM stereo broadcast device which wasn't properly decoupled from the wall transformer. It had an annoying 120 Hz hum on the broadcast signal. The fix was easy and minor; however, I have years of experience with this sort of thing. Most kit builders wouldn't know enough to do what I did.

John Ramsey hasn't always run a squeaky clean operation. Remember those "tail-light testers"? It was a very low power 10 GHz transmitter designed to be picked up by most radar detectors. Even though the device was probably legal under the part 15 rules and regs, the FCC wasn't amused. They told him to get rid of the kit. He later tried to get rid of his inventory by putting a "morse code key" on it for ham radio enthusiasts. That didn't last long either.

I think this raid, if it happens as John Ramsey's quoted articles claim, is a frightening turn of events.

Has anyone from the Electronic Freedom Foundation seen this? Does anyone have a case number and/or prosecuting attorneys's name?

7503. NYPD Freq. for Times Square

Newsgroup: rec.radio.scanner
Date: 1999-12-30 00:00:00 UTC
From: Michael <mcz84@yahoo.com>
Message-ID: <84g0l8$1on0$1@newssvr04-int.news.prodigy.com>

Does any know what freq. the NYPD is using in Times Square? Is it their regular ops. freq. or is there a special field control freq.

I seriously doubt that your PRO-2006 with a OS-456 board in it will become obsolete anytime soon. This GRE radio and Opto's controller card are pretty robust and should be very useable for many years to come. Hang onto this radio...your going to see new Land Mobile stuff popping up in the 700Mhz region...and the PRO-2006/OS-456 are just the ticket for that........Kirk

Ahh, so you have two college degrees. Which degrees and from what college
Toliet-Boy? Your lie is growing.

> which meet the requirements
> as
> a qualified therapist in both Oregon and Washington.

A qaulified therapist in Washington doesn't need a degree. The requirements
can be met at a Voc school no college degree needed Toilet-Boy.

> > > & approval by one state as a "Clinical Supervisor"
> > > over a mental health treatment agency,
> >
> > Which state?
>
> Oregon

According to the State of Oregon a "Clinical Supervisor" is nothing but a
title. They have to meet certain requirements that are checked during
audits. No degree needed. Nice try Toilet-Boy.

Once again I see you have changed your name to defeat the killfiles. Why
don't you use one of the names you so readily answer to? Toilet-Boy or
John-Bowl seems to be your given.

Well why don't you just crucify them. If people want to ask questions
about a certain radio modification let them. Maybe this is there first
time on the news group and aren't aware of the radios capabolities. I
think some people should get off their high horse and be more helpful
rather than being rude. I don't think this news group is strictly
dedicated to know it alls.

It's not just EDACS but for Motorola when in the scan id mode. Open
scan id mode the alpha tags work OK.

7517. PRO-2052 thoughts

Newsgroup: rec.radio.scanner
Date: 1999-12-30 00:00:00 UTC
From: qdh <qdh123@yahoo.com>
Message-ID: <84ga97lob1@q.seanet.com>
Source record: 98301

I bought myself a Christmas present this year - a PRO-2052 trunk tracking scanner. I've played with it for a week now and thought I'd share my impressions as it's a relatively new product on the market. First, bear in mind my perspective to this - I'm moving up from a 17 year old 50-ch BC300 scanner that didn't have 800MHz. So some of my "amazements" won't seem as impressive to those of you with more modern gear.

I looked it over at Radio Shack, with an over-enthusiastic salesman who hadn't a clue what the thing did but really, really wanted to close the deal. Offered at list price of $370 but he'd knock 10% off if I'd sign up for a RS credit card on the spot. Our state's excessive sales tax brought it back up to near list. Having no respect for RS, I went home and ordered it from Grove for $300 plus $12 2nd day air, no tax. Excellent people to deal with.

First impressions out of the box: for the amount of money this thing costs, it feels like a cheap toy. Cheap plastic case, rather small, and weighs but a few ounces. The infamous label "Custom made in Phillipines for Tandy Corp." And it has a god-awful wall blister for a power supply. Why, why can't they put the P/S in the case for a base unit? My BC300 was built like a tank - steel case, 5 lbs, built-in P/S - you know, the illusion of quality.

Fortunately, things get better. The sensitivity is much better than my old BC300. Using simply the internal 15" ant at ground level I had no problem listening to the trunked systems of Seattle police (20mi away) and the tower control at SeaTac airport (12mi away) plus most of the ground-transmissions of ATC in western WA. I can now scan VHF-low with no image problems from local FM broadcast stations. Haven't found any birdies yet.

For some reason I had the impression the PRO-2052 was virtually identical to the BC245XLT and PRO-92 with more memory and expanded freq range. Well, it's not virtually identical. It cannot simultaneously do trunk tracking and conventional scanning. It does not do E.F. Johnson systems (which is what our State Patrol uses). Lesson learned - study the specs more carefully. Do not assume that because this is the most expensive scanner it automatically picks up all the features of lower-priced units.

The audio quality is poor - muffled, not crisp at all. Usable but not pleasant. I like the continuous freq coverage of 108-512MHz, which picks up the military air band. It goes up to 1300MHz, but skips 960-1240. Don't know what's there, but I'm always suspicious when something is missing. Also, in the freq ranges that go through the TV bands, it will only allow you to select the TV channel audio freqs - you cannot enter anything in between. A convenience I suppose, but don't do me favors, please - I'd rather be able to enter any freq I please even if it's the buzz of a video

carrier. Also, while it handles 12.5kHz spacing in 800-900 area, it doesn't in the lower bands. Which I unfortunately found out last night while trying to program some FBI freqs such as 162.7875 - the PRO rounds it up to 162.8000. C'mon, it's a brand new unit, so why didn't they design it to work with today's spacing? Another annoyance - while trunk tracking it will not lock on to any transmission that is designated "private" or "phone patch" by its ID code, even though the status bar shows you it's taking place. Once again I'm being protected from myself - I hate that.

Size DOES matter. 1000 channel memory is HEAVEN! It almost seems unlimited. (Of course, I said the same thing years ago when moving from a 10Meg drive to 80Meg.) I love loading up banks with tons of trial freqs picked up from the NG or other sources. The scan speed is so fast it's not a problem. The data skip feature doesn't really work. One thing my BC300 had and the PRO-2052 doesn't have is an activity log. The BC300 would count and store the number of hits for each channel which made it easy to figure out which channels were useful. With the PRO, you have to do it yourself with pen and paper.

So there you have it. It'd be great if someone had the balls to make a truly impressive scanner, Government be damned. But, this is what we've got. Is it the greatest radio on earth? Naw. Does it work as advertised? Yes, pretty much. Is it priced right? I'll bet the manufacturer turns these out for about $40 each. But at $300 in the free market it's not too far above where it should be. Would I buy it again? Yep.

7518. Re: BILL CHEEK DIES!!

Newsgroup: rec.radio.scanner
Date: 1999-12-30 00:00:00 UTC
From: Seminary Student <romans10-9@hawaii.rr.com>
Message-ID: <q3Oa4.96$xL6.4733@hnlnewsr1.hawaii.rr.com>
Source record: 98302

Bill Cheek's Last Stand
By James B. Kelleher

Bill and Cindy Cheek thought they'd hit bottom earlier this year, after they were targeted in a sting operation by New York City cops who didn't like the fact that the local couple was equipping Big Apple residents to eavesdrop on police communications.

Arrested in late March in an early-morning raid on their Mira Mesa home by more than a dozen armed federal agents, the Cheeks were whisked downtown, strip-searched, locked up in the Metropolitan Correctional Center, hauled before a judge, and charged with conspiring to use interstate commerce "to distribute prohibited electronic communication intercepting devices."

"I still have a sore on my foot I got from the sandals they made me wear in jail," says Bill.

Later, they were pressured to fly to New York -- a $1500 trip they paid for themselves -- in order to be interrogated by investigators who, Bill says, "called us every name in the book...including 'criminals' and 'liars.' "

At the time, it was about the most frightening and disorienting turn of events the couple had ever known. Today, the Cheeks understand that was the fun part.

Their tuition in the lesson that No Matter How Bad Things Get, They Can Always Get Worse was administered this fall by doctors at Sharp Rees-Steely and the U.S. Attorneys Office in New York.

In late September, the doctors at Rees-Steely diagnosed Bill with lung cancer. They told the 53-year-old, who has no health insurance, that he had just three months to live -- maybe six if he underwent chemotherapy.

A week later, U.S. Attorney John L. Smith convinced a federal grand jury in New York to indict Bill on one count of violating Title 18, United States Code, Section 2512 (1) (a), a felony. "BILL CHEEK," the indictment read, "did knowingly and intentionally send through the mail and send in interstate commerce electronic, mechanical and other devices, knowing and having reason to know that the design of such devices rendered them primarily useful for the purpose of surreptitious interception of wire and electronic communications...."

The good news? The charges against Cindy have been dropped. The bad news? Bill appeared to have a big decision to make.

Because of a darkly ironic scheduling conflict, the dying man had not one but two appointments to keep last Tuesday. The first was here in San Diego, where Bill was scheduled to undergo his first bout of chemotherapy at Sharp Rees-Steely in Linda Vista at 8:00 a.m.

The second was in Brooklyn, where at 6:30 a.m. San Diego time Bill was expected to enter his plea in The United States of America vs. Bill Cheek (CR-99-0914). The U.S. Attorney's office, which was informed of Bill's diagnosis and prognosis several days before the Grand Jury indicted him, sent the San Diego man a get-well-soon card of sorts. In an October 4 letter, the U.S. Attorney's office informed Bill that if he failed to appear in the Brooklyn court at the appointed hour, "a warrant would be sought for your arrest."

Bill's reaction? "Now," he says, "I'm pissed."

Anyone familiar with the recent record of the New York City Police

Department can perhaps understand why the cops there would be sensitive about having their two-way communications intercepted by civilians or anybody else. Critics of Mayor Rudy Giuliani, including the Reverend Al Sharpton and others, say Giuliani's campaign to clean up the city has involved more than a little bad behavior on the part of the cops, particularly toward blacks and Hispanics.

The killing earlier this year of Amadou Diallo, the Guinean immigrant shot 41 times by four cops in the Bronx who mistook him for a rape suspect, as well as the torture of Abner Louima, the Haitian immigrant raped with a plunger by a cop in Brooklyn, are just the most publicized examples of a trend, critics say, of growing police brutality in Fun City. Just this summer, a federal probe of the New York City Police Department led to calls for an outside watchdog to oversee its 39,000-officer police department. Naturally, the cops were against the idea. They don't want anybody monitoring their activities -- or their communications.

Still, Bill and Cindy say they don't know why the authorities singled them out. The Cheeks' home-based business, COMMtronics Engineering, was not the only company in America selling devices that would decode the latest generation of police communications. At least two other outfits -- MFJ Enterprises and Optoelectronics -- were offering similar units over the Internet when the cops took the Cheeks down.

But as the editor and publisher of World Scanner Report, and an outspoken critic of Federal Communications Commission regulations, Bill may have invited the feds to draw a bead on him. He was certainly no stranger to government-communications regulators. Twice in the 1980s, when he was editor of the 11 Meter Times and Journal, a publication for

citizens band
(CB) radio buffs that he published from home, Bill had
run-ins with the FCC,
which accused him of using his columns to encourage others
to break the law.

In 1988, Bill shut down the 11 Meter Times and Journal in
what he says
today was an unofficial deal with the feds, who told him
they'd stop their
investigation if he stopped publishing. Bill played ball,
and the FCC kept its
word. He and Cindy then concentrated on building up
COMMtronics, which
sold a variety of items of interest to scanner buffs and
offered
computer-consulting services.

The Cheeks' arrest this spring came after undercover New
York cops
contacted the couple in late 1998 and early 1999 and bought
five do-it-yourself
kits over the Internet. Once assembled, the units allowed
users to unscramble
the encoded messages that pass between mainframe computers
at police and
fire departments and those onboard computers, or mobile data
terminals
(MDT), inside police cars.

U.S. law enforcement began moving their communications to
MDT back in
the 1980s, in an effort to put information about
surveillance, ongoing
investigations, and other sensitive matters out of earshot
of eavesdropping
criminals. The transmissions still went out across the
airwaves, but to anyone
listening in on a regular police scanner, the encoded
signals sounded like "a
buzzsaw or musical notes without a melody," Bill says. "That
sound is really
the data."

The move to MDT posed a challenge that scanner enthusiasts
like Bill took up
with gusto. Using parts readily available at Radio Shack,
they built devices
known as "data decoder interfaces," simple circuits that
translated the analog
MDT signals the scanner received into digital signals a

computer could use.

For radio buffs who didn't want to build their own, the Cheeks offered a fully assembled and tested interface with a 3.5-inch floppy disk containing the software for $48, delivered.

"It's a passive device," says Bill. "It just takes those analog signals, shaves the curve off them, and makes them square. That's all it does."

When the decoder and scanner were hooked up to a computer loaded with the right software -- software anonymously written but widely available around the Internet -- users' computer screens would begin filling up with the unencoded text of the intercepted transmissions.

The NYC cops and the U.S. Attorney say that's illegal. The Cheeks say that's hogwash. The couple says that because MDT communications are encoded rather than encrypted -- a distinction that they say makes all the difference -- devices like the decoder are legal.

They cite a 1996 case, U.S. vs. Larry Gass, where a federal judge in Oklahoma ruled that any government radio communication that was not encrypted was, in Bill's words, "fair game for the public."

"Well, MDT signals are not encrypted. They are broadcast 'in the clear,' in terms of computer-talk," Bill says.

(Phillip Katowitz, Bill's court-appointed public defender in New York, did not return a call seeking comment on the case. "Don't take it personally," Bill says. "He doesn't call me back either.")

Believing their arrest was the result of a simple mistake, a mistake that quickly would be corrected if they just talked to the NYC cops, the Cheeks agreed to play ball with the prosecutors during the days following their arrest.

In retrospect, they say, that was probably a mistake.

"We knew we didn't have enough money to fight the thing, so we just thought
that if we cooperated, we could clear things up," says Bill. "In fact, one of the
prosecutors told us that it would just be best if we didn't contact the press."

Over the next few months, Bill kept his friends and acquaintances apprised of
his case through e-mail. Over the weeks, the missives telegraphed the couple's
increasing confidence that the issue would be cleared up and that things would
get better. Unfortunately, Bill and Cindy were wrong.

In late April, Bill told the Reader by e-mail that, "The case has progressed to
where our (newly assigned) NYC public defender seems to think the U.S.
attorneys might drop the criminal side of the charges if we accept some sort
of a civil injunction....whatever the hell that means."

Then, Bill went quiet for several months. He was not feeling well, vague
aches and a fever. He stopped selling the data decoder device, but he
continued his computer-consulting work and hoped for a painless resolution to
his legal ordeal.

In early September, the Reader sent an e-mail to Cheek, asking him for an
update on his case. He replied:

Hi! And thanks for asking! Actually not much new. On June 21, Cindy and I
went to New York for arraignment and then met with the U.S. attorney and
two NYC cops.....who called us every name in the book..... including
criminals and liars.

After the meeting, our (worthless) public defender attorneys said the
prosecutor was inclined to drop the charges, but the two NYC dicks wanted
more time.... That was on June 21, mind you.

Unbeknownst to us until a few days before, there was another hearing held on
August 18. (We didn't have to be present.)

We were apprised of it a few days in advance and were told that the charges
would be dropped contingent on a few easy-to-agree stipulations.

The 18th turned out to be a hearing where the US attorney begged the judge
for six more weeks of "excludable delay," a time period that doesn't count
toward a "speedy trial." We had no choice but to go along with it.

Other than that, about all else I can tell you is that the local Secret Service,
who first arrested us, gathered the "evidence" and acted on behalf of the
Eastern District of New York, feels that it is a shit case that never should
have gone as far as it did. I am told that they told the U.S. attorneys as much,
too.

But we're still in limbo and know little else.

Thanks for your interest.

Kindest,

Bill

Then, three weeks later, Bill sent out the following e-mail to his friends and
supporters.

9/30/99 Hi ya, Gang!

Apologies for this impersonal newsgram format, but there are so many of you
friends, associates, and solid acquaintances that I have to use this format to let
you in on the latest. If you DON'T want to receive any more mailings, let me
know and I'll take your address off my list.

THE LEGAL SITUATION Least importantly, but relative to Cindy's and my
legal situation, the Feds still think they may prosecute us, but they're not for
sure. They've won several delays, so Cindy and I are still in a holding pattern.
But like I said, that issue is not so very important anymore.....

THE MEDICAL SITUATION The thing I need to tell you about is that

recently I was diagnosed with terminal lung cancer. The doctors gave me 3-4
months to live if I don't get treatment. With some relatively new
chemotherapy, they said I might get an additional 4-6 months.

The specific diagnosis is "Stage IV Non-Small Cell Lung Cancer." As grim as
that prognosis is, there are still rays of hope. Just today, a gentleman gave me
a tip on a promising new drug for cancers like mine, now in clinical trials.

I called the company and passed the initial criteria. Hopefully they'll get back
to me soon. But that's why I am writing.....

MY NUMBER 1 REQUEST No one knows it all, including the doctors. If
any of you folks know of promising treatments for lung cancer, I will be most
grateful to hear about it, whether medical or holistic.

MY NUMBER 2 REQUEST If you know of nothing (as most of us don't),
then I shall be grateful for your PRAYERS. I make this my #2 REQUEST
primarily because God helps those who help themselves.

I remain staunch in my belief that prayer and faith are the strongest forces in
the universe.

NOT EXACTLY A REQUEST.... As we are without medical insurance and
other significant resources, it's been asked if we accept monetary
contributions. Desperation has driven me to say "Yes." Close family and
friends took it upon themselves to set up a special account for this purpose.

Contributions can be sent directly to:

Union Bank of California Acct# 0771354719 8359 Mira Mesa Blvd San
Diego, CA 92126 Attn: Rhonda Smith or Kevin Smith (619) 230-3800 payable
to: Bill or Cindy Cheek or Cynthia Cheek trustee for William D. Cheek, Sr.

or, if you prefer:

Cindy Cheek PO Box 262478 San Diego, CA 92196

MY PRESENT CONDITION At the present time, I am still in pretty good condition overall. There is some pain, especially at night, and it's been weeks since I had a full night's sleep, but still.... I'm holding my own. My pain killers are Codeine #3 and Vicodan. They work pretty good, so far.

WHAT'S COMING SOON I am to see an oncologist today to schedule the first round of chemotherapy and possibly radiation (not sure), but if I get accepted in a clinical trial, I'll get some kind of a chemotherapy and a chance at a trial drug.

Between working for a living (which I still can and must do), attending to family issues, and settling my private affairs, obviously I won't be able to personally answer much e-mail. I will continue writing for MONITORING TIMES through the December issue, after which I'll take a leave of absence.

I'll continue publishing the WORLD SCANNER REPORT through the end of the year, or as long as I am able. But my immediate objectives are to get into and through the chemotherapy; and to live what's left of my Life to the fullest.

CONCLUSION.....FOR NOW My Life has totally changed over the past two weeks since I learned of the cancer. Things that used to matter a lot...DON'T. And some things that didn't seem to matter are now all-important.

Time with my wife matters most. Time with radio and computers matters the least. Life certainly has taken a strange turn over the past two weeks.

That's all for now. If you want to keep posted to the latest, you're already on my mailing list and will stay there unless you ask to be removed.

Again, please include us in your prayers!

Hugs to all,

Bill & Cindy

A week later, Bill was indicted by the federal grand jury. U.S. Attorney Smith, who only joined the federal prosecutors office last month from the Manhattan District Attorneys Office, denies the timing of the indictment had anything to do with Cheek's grim prognosis.

Asked if it was at all unusual for prosecutors to indict a dying man, Smith said, "Honestly, I don't think that's something I can answer. I think you have to look at each case on a case-by-case basis. I think, you know, that factor alone didn't say what kind of case it was, what the other particular factors involved were."

Bill called the indictment "flaky" and vowed to fight.

At the last minute, Bill's attorney and the federal prosecutor agreed to a one-week delay in his arraignment. So at 8:00 a.m. on Tuesday, September 12, Bill and Cindy went to the Sharp Rees-Steely Clinic in Linda Vista and underwent his first chemotherapy treatment.

The visit took longer than he expected. But afterward, Bill, who lost 25 pounds in recent months, felt hungrier than he had in weeks and "ate like a pig all day and didn't get nauseated like they said I might.

"They say it will get worse and that I will lose my hair. But then they say some people have few if any side effects. I think I am the type to not get hit too hard. So here's hoping."

This past Tuesday, Bill was expected to enter his plea. Given his condition, he was allowed to do so by telephone. Pleading guilty would have allowed him to concentrate on enjoying his final days with Cindy. But Bill planned to fight the charge anyway.

Smith, the U.S. Attorney, refuses to predict when the case might go to trial.

"It's difficult to say," he says. "You see how long this
case took before we got
to arraignment. In some cases, a date might be set two
months later. In other
cases, it might be nine months later."

Which means Bill probably won't live long enough to clear
his name.

Which explains why Bill Cheek is "pissed."

"The feds are playing dirty pool," he says, "damn dirty, and
that happens to be
a problem for the nation."

> anyone know about the raid at ramsey electronics ?

I have further information regarding this case:

The original case was filed in Buffalo, NY. It has just been moved to Rochester, NY. No word yet on who the US Attorney will be in Rochester.

For those who are interested, the prosecuting attorney in Buffalo WAS (but no longer is)

Joel L. Volanti
Assistant US Attorney
138 Delaware Ave.
Buffalo, NY 14202

The name of the case is (logically enough)
United States of America vs. Ramsey Electronics, Inc.

This information comes to me via John Ramsey.

I will be writing a letter shortly, addressed to Mr. Volanti and my Congressional Representation. I will post a copy on this news group when I put it in the mail.

I strongly advise others to do the same. This isn't about one kit manufacturer. This is about all of us, our rights as citizens, and the inexcusable ignorance, incompetence, and wastefulness of our federally appointed judiciary.

After reading this, please tell me, Is there still a "No-Code" class. It appears the Tech and Tech-Plus are all rolled into one Does this mean that new tech (after April, 2000) will or will not have to pass a 5WPM code. Also, will the NEW techs have HF?

Thanks
George

There still will be a codeless Tech. The next class after Tech will be General, and will require a 5 wpm code test. New Techs, or any Tech without 5 wpm, will not be able to use HF until S25.5 is deleted.

> Does anyone have experience with the above named scanner? How does it
> compare to a 245XLT?

I have a review of both at my site. But these two really aren't in
the same class to be easily compared.

The Sony does not handle trunked system tracking. It is a wide
range receiver covering 25-1300 while the 245 is segmented coverage
from 29-956. This means the Sony can pick up a lot of things that
the 245 can't.

The Sony does do Wide FM for FM broadcast stations and TV audio
frequencies. The Sony has selectable receive modes and step sizes.
Also has service search.

Like the 245, it has computer control with upload/download.
But the 245 enjoys support from a number of companies that
write software catering to it.

As far as receiver performance goes, the Sony simply blows
the 245 away in both sensitivity and overload rejection.
Audio on the Sony is MUCH better as well. Of course you
get all of this at an added cost since the PC version runs
about $100 more than the 245. The non-PC version runs
about $50 more.

If you need a "TrunkTracker" than the 245 is the way to go.
If you want a more advanced handheld, then the SC1 might
just be the ticket.

Read up on both, and see which seems to match the target
you're shooting for!

That's how most Unidens and RadioShack models come these days.
And yes, the 2052 is made for RadioShack by Uniden.

> And it has a god-awful wall blister for a power supply. Why, why
> can't they put the P/S in the case for a base unit?

That's Uniden's modus operandi. It isn't all bad as it keeps
the generated heat outside of the box and away from the
electrical components where it would slowly do its damage.

I actually found the 2052 to be on the weak side using the stock
antenna. Works MUCH better with a larger or externally mounted
antenna! Especially on 800+ MHz.

> Haven't found any birdies yet.

I found not a one on my unit!

> It goes up to 1300MHz, but skips 960-1240. Don't know what's there,

Then you need to buy a continuous tuning model like one from Alinco,
AOR, Icom, Sony, etc.

> One thing my BC300 had and the PRO-2052 doesn't have is an activity
> log.

Since this model has a computer interface and the protocol is
listed in the manual, expect a wide range of software in the
near future that will let you do so much more than the BC300
was ever capable of!

> So there you have it. It'd be great if someone had the balls to make
> a truly impressive scanner, Government be damned.

There are a lot of very nice radios on the market. Try looking here
http://www.strongsignals.net/htm/manufact.htm and doing some
research to see what else is out there.

Best of luck with the 2052, and happy new year!

7538. Amateur Restructuring Announcement - FCC screws Ham Radio!

Newsgroup: rec.radio.scanner
Date: 1999-12-30 00:00:00 UTC
From: vlfiscus@mcn.net
Message-ID: <s6nqporn5k291@corp.supernews.com>

The FCC made known its restructuring decision today and it sucks!

I Blame the ARRL!

NEWINGTON, CT, Dec 30, 1999--Amateur Radio will get a new look in the new millennium. The FCC today issued its long-awaited Report and Order in the 1998 Biennial Regulatory Review of Part 97--more commonly known as "license restructuring." The bottom line is that starting April 15, 2000, there will be three license classes--Technician, General, and Amateur Extra--and a single Morse code requirement--5 WPM.

"We believe that an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art," the FCC said.

Besides drastically streamlining the Amateur Radio licensing process, the FCC said its actions would "eliminate unnecessary requirements that may discourage or limit individuals from becoming trained operators, technicians, and electronic experts."

Although no new Novice and Advanced licenses will be issued after the effective date of the Report and Order, the FCC does not plan to automatically upgrade any existing license privileges. The ARRL had proposed a one-time across-the-board upgrading of current Novice and Tech Plus licensees to General class, but the FCC declined to adopt the idea. This means that current licensees will retain their current operating privileges, including access to various modes and subbands, and will be able to renew their licenses indefinitely.

Starting April 15, 2000, individuals who qualified for the Technician class license prior to March 21, 1987, will be able to upgrade to General class by providing documentary proof to a Volunteer Examiner Coordinator, paying an application fee, and completing FCC Form 605.

The FCC's decision not to automatically upgrade Novice and Tech Plus licensees means the current Novice/Tech Plus HF subbands will remain and not be "refarmed" to higher class licensees as the ARRL had proposed. The FCC said it did not refarm these subbands because there was "no consensus" within the amateur community as to what to do with them.

As it had proposed earlier, the FCC decided to lump Technician and Tech Plus licensees into a single licensee database, all designated as "Technician" licensees. Those who can document having passed the 5 WPM Morse code examination will continue to have the current Tech Plus HF privileges. "If documentation is needed to verify whether a licensee has

passed a telegraphy examination, we may request the documentation from that licensee or the VECs," the FCC said.

In addition to reducing the number of license classes from six to three and eliminating the 20 and 13 WPM code tests, the FCC also will reduce the number of written examination elements from five to three, authorize Advanced Class hams to prepare and administer General class examinations, and eliminate Radio Amateur Civil Emergency Service (RACES) station licenses. RACES will remain, however. "After review of the record, we conclude that we should eliminate RACES station licenses because RACES station licenses are unnecessary for amateur stations and amateur service licenses to provide emergency communications," the FCC said.

Under the new licensing scheme, there will be four examination elements. Element 1 will be the 5 WPM Morse code exam. Element 2 will be a 35-question written test to obtain a Technician license; Element 3 will be a 35-question written test to obtain a General license, and Element 4 will be a 50-question written test for the Amateur Extra license. The FCC has left it in the hands of the National Conference of VECs Question Pool Committee to determine the specific mix and makeup of written examination questions. Current Amateur Radio study materials remain valid at least until the new rules become effective in April.

The FCC's new licensing plan means someone will be able to become a ham by passing a single 35-question written examination. The plan also simplifies and shortens the upgrade path from the ground floor through Amateur Extra--especially since amateurs will only have to pass one Morse code test.

Elimination of the 13 and 20 WPM Morse requirements also means an end to physician certification waivers for applicants claiming an inability to pass the Morse code examination due to physical handicap.

The effective date provides a window of upgrade opportunity for current Advanced licensees. Between now and April 15, current Advanced holders may take the existing Element 4B, a 40-question test, giving them credit for having passed the current Extra written examination. Likewise, holders of a Certificate of Successful Completion of Examination (CSCE) for Elements 3B or 4B dated on or after April 17, 1999, will be able to qualify for General or Amateur Extra respectively when the new rules go into effect on April 15, 2000.

The FCC disagreed with the League's suggestion that it undertake a restructuring of operating privileges along with licensing restructuring. "We believe that in light of ongoing discussions concerning implementation of new and more modern communications technologies within the amateur service community, we should accord the amateur service community an opportunity to complete such discussions and possibly reach a consensus regarding implementation of new technologies before we undertake a comprehensive restructuring of the amateur service operating privileges and frequencies," the FCC said in its Report and Order.

In its amendments to Part 97, the FCC's Report and Order refers to a "Club Station Call Sign Administrator," something that does not exist under the current rules and which was not explained in the R&O itself. An FCC spokesperson said the Commission plans to issue a Public Notice soon to explain the program and to solicit qualified entities to serve as call sign administrators for club station applications.

7539. Trunking help

Newsgroup: rec.radio.scanner
Date: 1999-12-30 00:00:00 UTC
From: --=Damage Inc=-- <nospam@all.org>
Message-ID: <g4qn6sktkfhepn1mqf56s6ef9dccbq80o2@4ax.com>
Source record: 98323

Have used various scanners for a long time now, but new to the trunking scene, and have a Pro-94 question.

When trunking any bank other than bank 1, the display readout for the channel number will read as the channel number in that particular bank, vise the actual channel number. For instance, if the scanner has stopped on the second programmed freq in bank 2, the readout is "2 ch" and not "52 ch" (bank 2 on the Pro 94 is for channels 51-100) or if the scanner has stopped on the fifth freq programmed into bank 4, the readout is " 5 ch" and not "155 ch" (Bank 4 is channels 151-200), and so forth.
Rather convoluted I know, but is the best description I can give.
Is this "operator error" or is everything as it should be?
Thanks in advance for the help.

7545. What is the BEst Outdoor Antenna for 900mhz

Newsgroup: rec.radio.scanner
Date: 1999-12-30 00:00:00 UTC
From: joegizjr@aol.com
Message-ID: <19991230185714.04798.00000163@ng-ce1.aol.com>
Source record: 98329

I need a base station antenna to pick up 900Mhz.

What is the best antenna to get and alos what kind of range can I expect from 9ooMHZ transmitters eg. but not limited to cordelss phone reception?

Is it more than a few blocks ?

Thanks,

Well I gave in and bought a Bearcat SC200. Overall I think its a pretty decent scanner, but I think there is some room for improvements.

10 character alphanumeric display, very nice feature, although programming all 200 channels with the alpha tags is enough to wear out the fingers. You get the data cable which will allow you to download a batch of frequencies for your area from Uniden and program them into the scanner with your PC. Pretty nice I guess if you don't know what you want in the scanner already, however it would be nice if they would have made available a program that you could load your own frequencies into the scanner with the alpha tags. Would defiantly be worth the cost to be able to backup your scanners memory in case of a battery failure.

This time Uniden tried something new and decided to include CTCSS in a handheld scanner. I must admit this is a very handy feature, with the triple conversion and the CTCSS you are pretty much free of any intermod or bleedover. The only thing I don't like about the CTCSS is when it is enabled, it will flash between the current frequency or Alpha tag and the PL tone. I really don't see the point in this, but maybe its a techie thing.

Beltclips..... For $185.00 you would think they could throw in something other than a cheap breakable plastic belt clip. Not exactly something that excites me.

The very noticeable blue face of the scanner cannot be missed, not really a problem or anything guess it goes hand in hand with the yellow Sportcat 150 :-)

As I said, overall a very nice scanner for the $$$. I only have minor gripes, definitely a keeper!

I agree, the letters should be ARKL for the American Radio Kickback League. They sold us out by giving away the 220 band to UPS, and I'm sure some people in Newington lined their pockets after that one, now this. More back room deals and payoffs!

I for one will NEVER patronize the ARRL a.k.a. ARKL! Boycott NOW!

What isn't so GREAT, Bill, is your Usenet etiquette (sp?). By adding only one line of new content to a 100-or-so-line quote, you're not only wasting bandwidth and disk space on the new servers that carry these groups, you're also wasting peoples time while they wait for the entire thing to download.

Please learn to trim your quotes.

Thanks.

Why blame the ARRL? I'm not a member, but it seems to me that the FCC took the restructuring one step further than the ARRL wanted.
Didn't the ARRL want 12WPM for Advanced and Extra and 5WPM for General??
How about four classes instead of three?

A lot of you ol'timers out there think that CW=CB with respect to this new license structure. IMHO, you're wrong! HF has a serious learning curve when it comes to long wires, tuners, grounding, etc... It's not like you plug in the mag mount to the HT and start yacking!

I worked really hard to pass the 5WPM code last month and I have been working a little 10M here and there. After stringing the longwire, tuning the MFJ941, the DSP-9+ and figuring out the Icom 706, HF is a lot of hard work! It's so rewarding to make a distant contact after all that...Don't forget the price of HF gear. You can buy several HTs for what a run-of-the-mill HF radio costs. You really have to want to get on HF. With the learning curve and the cost, I don't think it's going to be as bad as some of you think.

Oh well, bring on the Extra!

73 and Happy New Year!

Dan / N7WPD

Record It is a great program for scanner recording. Its free and it has an ajustable VOX feature. VERY simple to use. You can record about 3.5 hours on 100MB (a zip disk is what I use) If you record at "telephone quality" you can get even more. In real time that could be a day or more.
You can do a search for it, I don't recall right now where I found it. I heard about it in this NG.

1. How can you blame the ARRL when the FCC went way beyond the ARRL
position?

2. So now we have it. This means that folks who give a damn about this
hobby will do whatever we can to ensure that the written test is meaningful
and is administered honestly.

3. This also means that those of us who use CW are free to use CW just as
before and those who don't will be required to pass a very minimal CW exam
to get in the door.

I think it's a good structure. Perfect? No, but would someone please
describe a perfect structure?

So kiwtchurbitchin and make it work.

Of course, there are those who would rather sit at a computer keyboard and
piss and moan rather than get on the air and enjoy the hobby. I'm off for
40 CW.

Hf is a piece of cake if you do a little research,a resonant antenna
or an autotuner would help,the Icom 706 is a good rig but menu driven
radios do have a learning curve that other rigs just as good and better
don't have,and they call this a MOBILE rig? I want something I never
have to look at and can operate by feel,thats what I use to operate HF
mobile 5 hours a day 6 days a week.Your 706 was expensive but the Alinco
DX70 is only slightly different and in some ways better for as little as
$599.

Win95 is a very limited operating system HOWEVER you ARE able
to execute programs in its environment SO it does FOR THE MOST
PART what it's spozed to do. They shouldn't have even released
Winscan until it was coded properly so that you could trunktrack
and categorize your favorite talkgroups. Winscan *in its present
form* is completely ineffective for anything except conventional
scanning. AND THAT WHY IT BLOWS!

The requirement for 5 wpm is only for the general class license and above.
you can still get
you Ham license by passing the written portion only. You license will the
Technician class.
then when you take the 5 wpm and the new part 3 exam then you will get your
general license.

So what is the problem. Those who never cared about cw can still go on and
careless about it. and those who do
can still have the privilege.

Thank god for the internet otherwise all of this language and strong words
would be lost. it is apparent that
some of the members commenting and are not true hams in nature.

Hey, there's RTTY on HF so I think *all* hams should have to pass a
60 wpm typing test to get on HF.

What we really need is a written test that includes:
1) FCC rules and regs.
2) Accepted operating proceedures and practices.
3) General electronic theory including how and why *not* to overdrive
a transmitter.

I'm new to scanners but I find them very interesting.
I'm looking at the BCT-12 by Uniden, to use in my car. I'd like to keep entertained on long road trips by finding out what the medics and fireman are up to, listening in on cell phone calls, etc. According to Uniden's webpage, this model doesn't can't listen in on calls, is that true?
But most of all, I would like to have a warning about highway patrol and police cars, to tell me when to pay close attention to my driving. How effective, and consistent are the police/state patrol warnings on these things?
And finally...
Is this a good choice for my needs?

Thanks,
Sam

This (somewhat well known) Amateur says it's good the FCC is
finally going to retire CW as it should have YEARS ago.
What should happen now is all question pools should be changed
and non-published - PERIOD. I'm ALL FOR the elimination of
ALL CODE REQUIRMENTS for a ham licence ***ONLY*** if the question
pools are then changed and non-published.

True! FCC and ARRL should have dropped CODE *YEARS* ago.
Keeping code is what KILLED ham radio.

> I blame the ARRL,NCI,FCC,CB,Catman,and all the hams that are too
>lazy,too stupid,or think the average person is too lazy or stupid.

Why?? because they feel it USELESS to learn an OUTMODED MODE of
communication called Code..? I know EE's with Masters and 2 PHD's
who could padd an Extra exam with no technical study and a light
review of the rules & regs. Know why they do not have a ham ticket?
Because ARRL wanted to keep the freakin code for soooo long. Now we
have
Internet and all in all, the ARRL is probably 5 dollars short and 2
weeks
late - as usual. I APPLAUD the FCC anouncement, but I am afraid
it's too little too late in the long run. Kids want Internet, not a
radio
to string up unsightly antennad and talk wioth old gassbags on HF.

I was looking for a ng that seemed to display some sort of maturity. Obviously this isn't one of them. You should rename the ng rec.radio.bickering so those of us looking for a REAL scanning ng would have someplace to go. I realize that this doesn't apply to all but once again the few ruin it for the many. It's a shame that out of 500 posts only 20% were acually scanner related. The rest were who molested who or who hopes who dies. Is there anyone here capable of acting older than a teenager?

There are a lot of extra callsigns to go at least in the 2x2 format and
we still can do in the somewhat useless area codes or add another digit
to them and since the extra and tech are only a few simple questions and
5 wpm apart..so what??

BTW..the FCC seldom comes up with ANYTHING on their own..they respond to
requests from people. I have submitted several requests for changes to
the rules and have received considerable consideration and response from
the FCC. This restructuring was a direct result of the ARRL submission
and the numerous comments surrounding the proposed action. The FCC
didn't just think it up. So if you want something changed, don't tell
me, tell them. There is an established procedure for submittal, but it
is easily accomplished.

The BC9000-XLT is a great scanner, if you do not require trunktracking. However, you better get one pretty soon, as they are being discontinued by Uniden, and distributor's stock will be depleting soon, as word of this is getting out. The BC9000-XLT has been a long time favorite.

The only reason that I'd be interested in this software
would be so that I could ad alpha-tags to the talk-group
IDs. Apparently this feature doesn't work in the demo
version. So much for a fully functioning demo. I'm not
going to risk 50.00 on this Winscan if their demo doesn't
even work correctly. Winscan is absolute bullshit. Don't
buy Winscan. It sucks.

I believe this is a fault with the WinScan Program. It should be fixed with the next WinScan update due in early 2000.

There has been discussion re this problem on the Strong Signals Trunking Board at;

www.strongsignals.net/trunking/index.html

I use Winscan, it runs both my BC895 and my BC245 on the same computer at the same time. There is a 1.1 patch to correct the Alpha tag problems that are in versions 1.0 and the demo version. It is a good, rock solid program that has never failed me. You can make the cable a lot cheaper than you can purchase it. Here's the site with the information:

http://www.futurescanning.com/895cable.htm

A analog audio cable from a computer CD-ROM drive has the correct connector.

You must empty the deleted file from the recycle bin and delete any backup/install files you have elsewhere on your hard drive or on CD's or floppies before the crack will work.

You should also make sure that no one in your address book has this file on their system or the crack will not work. You might also try deleting all of the partitions on your hard disk first too. I had to use a low level format to get it to work.

I think it's a good thing. My time is better spent on theory
than code anyway. After April 15th, I can upgrade to General
for "free", that is, because I got my Tech back in 1976 I took
the General theory and 5wpm already. BUT----

Not that the code is now "done" with me, I'll probably get
the study guides to do an upgrade to Extra. And I'll keep
my current callsign. As my company is doing some IC design
of 2.4 GHz radios on a chip, that theory could come in handy.
Code isn't useful at work anyway....

The amount of profanities on this group is less
than your average evening of TV viewing at home.

Try and stick it out though, the only time this newsgroup
seems to go over the deep end is when john mackey starts
some post about mr. bill cheek. Yes, mr. cheek could be
quite harsh to some on this newsgroup (especially mackey),
but he gave more scanner related information than any one
else on this newsgroup.

I'm sorry if i offended you, but after you spend some time on
this newsgroup you'll also wish for mackey to hurry up and die.

peace

monty

I have one and like it very much. But to be fair ALL I use it for is monitoring ASA , Busch and Winston Cup racing. Its nice cause you can program by car number, and put more than one freq under that car number! New, they come with a stubby antenna. If you intend it to be a racing scanner, I'd recommend it. If it will be an all-around scanner, someone else will have to fill you in.
Hope that helps!

I have always understood it to be an inverse relationship;

The higher the WPM , the lower IQ .

If society ever required me to live a binary (ie dit / dah) guided life,
then I may have a need to be a CW kind of in-DUH-vidual...

It's too late now, of course, but I wish that the FCC had two-tracked it. They could have had code and no-code (or 5wpm) tracks. Leave the CW portion of the Extra band for folks who can pass a 20wpm test. Leave the phone portions for folks who don't care about CW. The good news is, people who don't want to learn the code are still going to stay out of the code sub-bands.

No, but I would concentrate on verbal communications whenever possible to
offset
the blight that the 18 WPM puts on your ability to keep up with technology.

I don't think it will affect me... I will keep on repairing the gear of the
coded
ticket holders who can pound cw, but aren't as successful with sand.

Oh, and I will do that with the extra burden of being a no-code tech,
overcoming social adversity to prove I am smart enough to pound sand.

Perhaps NOW the only thing to discourage new hams is this type of
"better-than-thou" ham snobbery.
I use my legal CB radio regularly to help truck drivers with directions
and just for general chit chat. I have even made a few friends with it. I
have never dead keyed, intentionally talk over anyone. Never caused
interference with the neighbors electronics. Never cursed or put down anyone
with my CB. But there are many hams like Dave that regularly knock me (I
realize not personally) because I am a CBer.
But I guess, what good is a club if you let everyone in, right? Keep
some that want in out, then we superior!

Dick ,your answer was not germaine to the question.!
Has logic failed you for you to respond in such a nonsensical way?
Code users will still be able to practice any where
and on all bands so what is the problem? Those who feel that
code is the essence of being a' real ham' can still continue to
flourish if the newcomers hold to the same ideals as those
soon to become silent keys..
As for being a "real ham"
would you suggest that any engineer must work on an
assembly line until the task at hand can be done
without thought, automatic, before he be allowed to
have a P.E.licence i.e. to make him a 'real" engineer?
Instead of being just a gas bag hooting in the forest
try applying a modicom of civility and logic in your
communications with the newsgroup or groups that
you appeared to have stumbled into.

You have shown yourself to be a liar again and again and again Toilet-Boy. I have nothing to do with your little cat fight with Cheek.

But you come when called by name. Why don't you change you internet name to Toilet-Boy or John-Bowl? You answer to them, are known by them you might as well post by them to.

The New Year is upon us. If you want to talk to me John-Bowl/Toilet-Boy do it on YOUR ng, alt.fan.john.mackey.

Back to scanning and Good-Bye Toilet-boy I'm adding your last three names to my killfile.

Good for you. I, however, won't be. I will be taking the 5wpm but, now thanks to the FCC, no faster. To me, the code is just like the sign language, or any other foreign language for that matter. It's nice to know how, but why should I be forced to be ultra proficient in an optional language that I may or may not want to use on the air?

I read with amusement an article in the "Welcome to Amateur radio" booklet which came with the ARRL welcome package after I got my Technician license. In it the author trumpeted the achievements of a particular gentleman who could copy some 76 wpm, and went on to encourage the readers to emulate his methods and "practice, practice, practice". For what?!!! So I can brag to my neighbors?

Code is useful, yes. My wife and I actually think it's fun learning it together. But more power to the FCC for giving code eliticists the proverbial UP-YOURS.

I'd rather learn how to pick up 2x4s with my butt cheeks than to copy 23wpm.
:-D

thanks for the info, So in order to get HF you must now get the General with
5WPM (piece of cake). Now, have they made the General test easier than it was
10 years ago? Is the the same test as Tech only with the addtion of code?

Thanks

I passed the 13wpm exam 48 years ago, Dick. Why will Don be a
REAL HAM and I'm not?

Bill:

Admittedly, I am one of those amateurs of which you speak. I hold an extra class license simply because of my ability to memorize the entire question pool and one lucky guess on the multiple choice code test (knew 6 of the answers, guessed one out of four on the remaining ones). Still, you can't memorize the question pools without learning something.

I took and passed the general written test this past April, it's a
bit harder than the tech tests. But not that bad. I did fail the 13wpm
code test though, they used the farnsworth method which screwed me up.
They sent the characters at 18wpm with slightly further spaceing which
I believe is wrong to do. I was copying true 13 at home no problem so
when I got to do the test it was a shock and I failed. I keep
practicing though anyway. If I think I can pass it before Aril a5th
I'll try again, if not I'll become a general anyway because I passed
the written on or after April 15th 99.

I would say "amen," especially to #3, but the problem is that most of the guys who overdrive transmitters and cause splatter over a 20 KHz bandwidth already know how and why to avoid doing it -- but just don't care.

Ahhh.......Trunktracker III!

So that's the base/mobile version of the BC-245XLT Trunktracker II with multiple system trunktracking, wideband frequency coverage, CTCSS/DCS, alphanumeric memories and computer control. Anybody know the release date and likely cost?

Wonder when MPT 1327 tracking and TETRA scanning will be released? Sounds like other scanner manufacturers had better start working on these soon before Uniden gets there first! Uniden will probably capture most of the mass US market with the '245 and '780. WAKE UP AOR, Yupiteru and ICOM !!

Happy New Millennium!

I sure don't see a problem with the changes. We now have
CB'ers in the 10 meter band, we have Generals, Techs and
Advanced operators in portions of bands there not supposed
to be on. We have all classes of operators in violation of
the rules everyday of the week. The problem here as I see it
is the same as its been for years, "ENFORCEMENT of the
RULES" We have groups of hams that seem to think they own
some frequencies. We have groups that cuss and swear on the
bands. We have groups that if someone gets within 3kc, go to
that frequency and try to take over. In my years of being on
ham radio, it sure seems to me the Advanced and Extra class
have the worst operating habits on the HF bands. And of
these poor operators many were CB operators at one time and
were rude there, ran big amplifiers, had to king of the
band. They came to ham radio and continue to have to be
king of the band. This is the way I feel about it, If you
feel other wise that's fine. Bill/KG8AW

Guys like you said the same thing when they enacted "novice Enhancement". I remeber the old farts selling off their 220 gear, because they didn't want to associate with novices. Life went on.

Guys like you said the same thing when the no-code tech came out. "Those no-coders are not "real" hams". Life went on.

Now we finally are recognizing the pointlessness of requiring advanced CW simply to access phone HF, and of course the old farts will whine about the doom and gloom that it will bring.

As far as I'm concerned, ham radio is much better off without guys that cannot accept people for who they are and not what class of license that they hold. I sincerely hope that this FCC action causes a lot of old stuffed shirts to sell all their equipment and throw in the towel. More room for the rest of us, that truly want to see ham radio progress, and who don't have a close minded, bigoted, and predjudicial attitude.

The real joke here is that you won't be able to really tell who the
so-called "real" hams are after a while, so you might some day end up
finding out that your best ham buddy never took above a 5 WPM test. What
will you do then?

Since the no-code tech license became legal, the applicants for the
novice license simply dwindled. There is really no need for a novice.
With the addition of the 5 WPM CW, you become a general now, and with
only a small increase in theory testing from the original novice.
Remember the FCC's REAL intent was to simplify administration for them.

>
> This would allow entry into Amateur radio without a CW requirement, if

Alot of people had suggested that. For whatever reason, the FCC rejected
that proposal. I guess having no standard published question polls would
have made it harder for them to administrate.

While I am grinning from ear to ear that CW has finally been
de-emphasized, I do agree that the the FCC's motives seem to be more
along the lines of releaving them of administrative burden, than it is
to "improve" the ham radio service.

Anyone out there who is scanning in the Memphis, TN area?

I have heard that
the local police/fire use a digital trunking system that
is scrambled. Can
anyone confirm this for me?

same).
I just really like the MVT-7100. It's nice to have AM/FM/WFM/SSB all in
one rig. It is much easyer to search with the 7100. It has a back
light. (that's nice.)And 1000 channels plus each bank can be set up to
search as well.
Also, don't over look it has a BNC, so you don't have to put on a
adapter to SMA.
You can use AC/carDC/
I do miss tone decode on the Q7A,R2.
The 7100 is more sensitive as well.

I made a mistake. This is not true. The kits were sold by Rainbow
Electronics, not Ramsey. I apologize to everyone for the confusion.

John Ramsey claims the cyberskip article is completely accurate. I
believe him. However, I should point out that he is the defendant in
this case. I'm trying to verify these facts independently, if
possible.

Why don't you quickly take the Ham test and get licensed it isn't a hard
exam (well not in the UK anyway). As long as you only produce the
licence in court and not before, they won't have time to check how long
you've held it and the judge might just throw it out there and then...

I can't tell you how much I enjoy my MVT-9000 (v3.3 from Bandercom). It's simply wonderful. Everything you wanted in a scanner and more.

Go to the Rich Wells site - he's got all the reviews etc etc.

Apparently Bandercom is also looking at employing computer control in these puppies very soon now.

PS, I use mine for normal VHF/UHF scanning, but it does a great job of not only AM SW but HF SSB as wel (with an external antenna :)

> but may know next to nothing about electronics.

It is a fact and there are numerous examples. No ham radio
test ever was that difficult, in terms of comparing it with
engineering, but the question pool scheme has been too far
out of range.

> That has now been simplified to only needing to learn 5 wpm Morse.
> You can handle about that speed after simply memorizing the code.

I doubt that very many hams will pursue it further now that
it won't be required.

> I guess I will finally be getting my Extra Class

I sure would. in your circumstances. I'd imagine a couple
hundred thousand others will, too since most won't be
required to much of anything else. How do you sort them
today? You don't.

The
> 11 wpm plateau where I have been stuck for several years will no
> longer be a barrier.

Mostly those barriers are caused by a couple of things.
One, learning the code character formations at too slow a
speed and never finding a way to re-learn them at speeds
higher than the "plateau". When one learns with Farnsworth
speed character formation speeds, where the code is formed
at ~15 to 18 wpm. but sent at slow-spaced, slow word speeds
it helps eliminate that difficult "hump" transition. Most
people who stay stuck at a "plateau" fail to learn that.

The other factor is that one will never learn code at
higher speeds unless he "pushes" himself to try to copy
considerably faster than he is able to copy. When you listen
to faster code, copying first the simple short words that
you can pick out, you find with a little time that you're
copying more and more of it as practice goes on, and you

start to hear words instead of just characters. Then when
you listen to the slower speed practice, it seems astounding
how slow "ordinary" speeds are, and how much of it you copy.

So you have to really make yourself work to practice beyond
your capacity, and you find that your capacity moves on up
to levels you never expected.

> I just wish they had the old style questions - where real electronic
> knowledge was required.

Ain't gonna happen anytime soon, I'm afraid. FCC just
dumped the whole testing scheme on to the VEC system, and
W5YI is on record as intending to eliminate theory from
written tests. Since he has installed himself in the
3-member Question Pool committee which decides exactly what
will constitute *all* the tests, it seems like done deal.

My time as a VE ended permanently yesterday, unless
something pretty drastic changes that I can't forsee at this
time.

Sure it is, as INFORMATION PRESENTED, not the exact
questions and answers.
Nice try at distortion, but it didn't work. There's NO

So being that i now hold tech+ license all i will have to do is pass a written test & i get my general? Wow thats cool cuz i got my tech when i was 12 & a year later learned the code for just long enuf to pass the 5 wpm test. now i'm 20 & have totally forgotten the code. so to get my general all i gotta do is study & take the exam, am i right? ant to those who think the question pools are a bad idea, i can still answer most of the questions in my technician study book after 8 years. I didn't memorize it, i learned it. and i assume that's what's inevitable when studying for the exam if you have an interest in radio (if not, then why do you want a license?) allright.... 73

>imagine they'll probably discontinue after April 15 since no

Oh, that's the plan, but time to practice is the problem. People have asked me if my hearing is bad because I go around with an MFJ tutor in my shirt pocket and earphone in my ear.

I wonder if the ARRL bulletins will drop down to 5wpm, too or just go away. I find it strangely schizoid that ARRL "broadcasts" (hey, that's not legal anyway!) code practice 3 times a day and is against a 20wpm proficiency test..

Gee great advice there Bill.
anyway, a good place to start is www.strongsignals.net it is an excellent site with info for everyone from scanner geeks to newbies. I remember back in the good ol' days when you prayed a seach engine would return anything when you began a search. Now, you type in a search phrase and you get 100000000 zillion pages many of which are completely irelevant. I have found www.google.com to be a good search engine for finding stuff since it returns results ranked such that the more other sites link to a certain site, the higher it appears in your results list. Since good pages will be linked to a lot, this tends to be quite accurate.
Take a look at strongsignals, he has some great links from there.

PS. Remember, in an age where there are thousands of web pages on any given topic, your best resource are never search engines which index the net, but the people who make it up. Don't hesitate to ask us these types of questions, thats what were here for.

> 27344 27349 27437 61440 27347
> Can't quite recall what the number has to be divisible by Thanks !

Actually, any number between 16 and 65535 could be a valid Type II
ID. The base number for a talkgroup is 16 + n*32, where n is any number
from 0 to 2047. The group may be addressed with flags indicating special
functions, such as emergency, private call, etc. The most common case is
a bridge, where one group is linked to another. For a bridge, your
trunktracker would display the base number + 3.
If you convert the ID to hexadecimal, you'll find that the third
digit is (almost) always odd. The fourth digit holds the flags and is
zero 98% of the time.

For the numbers you cited:
27344 = x'6AD0 normal talkgroup number
27347 = x'6AD3 group 27344 + 3 i.e. a bridge
27349 = x'6AD5 group 27344 + 5
27437 = x'6B2D most likely invalid
61440 = x'F000 most likely invalid

If we are trying to appeal to kids nothing we can do will help,for the
most part it is an adults hobby,nothing wrong with that.
The ARRL has always been against any code requirement regardless of
what they say.

It's not knowing the code,it's being willing to make a small
investment in the way of a little effort to get something worth
having,and if the crybabies didn't think it was worth having they
wouldn't be crying.
Having a few simple hoops to jump through helps keep out the moderatly
interested that wonder from hobby to hobby,job to job,wife to wife,and
take what they can get but never give because they were really never
that interested.

I know such guys, too. And their main reason not to bothr about an amateur radio ticket is that they prefer to talk to sensible guys. And somehow, the above quote proves their point.

To hold CW responsible for the presence of alternatives for long distance communication, and thus of the presence of choice, and thus of a significant number of people opting for internet instead of amateur radio, is simply absurde.

The ARRL wanted NO CW requirement,always has.They couln't put that in
their proposal or the membership would have thrown a fit,they know just
how far they can go,just like the good 'ol US government.

Mr. Tim Sir, Although your comment doesn't apply to me, I would like to know what fantastic significant technical expertise you have brought to amateur radio since you have been licensed?

Thats right Dwight ,I always heard how hard it was to become an extra
and had a lot of respect for the "radio Gods",then with no radio or CW
knowledge I started studying and had my extra 7 months later.I still
didn't really know anything about radio,just the code.I no longer
respect extras just because they are extras,and now even a poodle can do
it.They should have made the requirements harder,not dumbed it down.

Has the demo also been updated to properly display the alpha tags? I'm very
interested in trying this program again, but the demo isn't much good if it
doesn't actually work properly.

GRE Data Manager

December 9, 1999

Thanks to Glenn Cohen from Scanners Unlimited for providing initial details on the
upcoming PRO-92 software!

"GRE Data Manager" program provides data management only; no scanner control.

The program installed very easily and without problems.

Upload and download to/from the radio performed flawlessly with no buttons to
push on the radio to initiate transfers.

Please note that our supplied copy was a demo version which blocks the use of
some features.

The user interface has six tabs located along the bottom of the screen:
CHANNELS
SCAN BANKS
ID LISTS
SEARCH BANKS (disabled in demo mode)
SEARCH LOCKOUTS (disabled in demo mode)
BANDS (disabled in demo mode)

Selecting these tabs brings up the appropriate screen for data manipulation.
Each screen contains columns for data input with the following screens containing the indicated data:

CHANNELS - Freq, Name, ID, Mode, Delay (on/off), Atten (on/off, Scan/Skip
SCAN BANKS - Name, Scan/Skip, Status (open/closed), Type (Conv, Mot, EDACS, LTR), Fleet map
ID LISTS - ID, Name, Scan/Skip

The Radio pulldown in the menubar at the top of the screen allows for selections:
Upload Radio to PC
Download PC to Radio
Settings

The Settings selection opens a window allowing the following settings to be

changed or adjusted:
Power on Message
Trunk and Non-Trunk delay times from 400 - 5000 milliseconds
Key tone pitch from 300 - 3000 Hz, or Off
Backlighting time from 1 - 15 seconds
Priority channel number and on/off

Body handling: Binary attachment payload not displayed: dbertone.vcf

Motorola M75 cellphone that I bought NEW a year ago.

It comes with leather belt case.

2 overnight drop-in chargers and 1 Intellicharger fast desk charger

Motorola Micro Tac Lite phone thrown into this package. Works but is
not in service right
now. Give it to your wife as all cellphones work on 911 by law whether
in service or not.

7 BRAND NEW in package slim Nickle Metal Hydride batteries

2 BRAND NEW Nickle hi-cap batteries

3 used for a year still work good hi-cap batteries

5 used but still good slim batteries

All batteries are Motorola, not some off brand

$300 for all or?

I will split this package up if you only want some of the things.

I am selling this to get a Star Tac instead. It is in good shape and
looks good.

[One or more binary attachments are retained only in the source text.]

The problem is that exams always trail the state of the art. The old commercial 'phone tickets were courses in radio-archeology. Then there is the matter of the licensee getting older. Some things don't change (antennas for example) but knowing that a quarter-mil of grid current is all one should draw on a 6146 won't do a whole lot for him or the hobby today.

Ultimately, one arrives at the conclusion that amateur licensing is a lot like driver licensing: be sure he knows the rules and posesses enough physical skill and ability so as not to be a direct party to an untimely death - then let him go.

In a hobby as multi-faceted as AR, much more than that is more harm than good. We will survive or we won't but licensing won't be a factor in much more than the speed at which it happens.

Oh, yeah. And the pinko commie ARRL caused Sputnick to screw up the
weather. I also heard they had something to do with the Kennedy assination
and the 1918 influenza outbreak.

Good grief, if some people only knew how goofey they sounded. And to think
they give them HAM radio licenses. There ought to be a test.

That's a lie, Dick, and you know it. I passed the 13wpm Morse code and flunked the written exam first try. Second try, the ham didn't have any way to send Morse code to me. He called the first ham and asked him if I could do 13wpm. The first ham verified that I had done five minutes of solid copy at 13wpm six weeks before. My code test and written test were given by different hams. The same thing is possible today.

1) Who said "broadcasts" of the type W1AW is doing are not legal? Not the FCC regs.

2) Just because someone is opposed to a 20wpm code test to get a ham license does *not* mean that they're against CW or opposed to helping someone who wants to learn code at 20wpm or higher accomplish that.

Many are getting too carried away with this thing. If you love CW you should be doing back-flips because we didn't loose any bandwidth in the process.

>Bob

In all honesty, the ARRL was caught off-guard by the FCC proposal to restructure and was at first unprepared to respond. What the FCC finally came out with cannot be laid at the ARRL's doorstep... the ARRL's response and proposal came several weeks after the initial ARRL proposal. MANY, MANY, other groups and individuals were pushing for dropping the code altogether (not unilaterally feasible with international treaty) and many were pushing for Automatic upgrades of existing Tech and advanced licenses. Looking over the ARRL's proposal to the FCC and the FCC's final document, I'd say the FCC pretty much brushed aside most of the ARRL's proposals (tougher written exams, no multiple-guess CW exams, 4 license classes, and 5 & 12 wpm CW requirements)

The FCC final decision was their own, NOT the ARRL's and bears little resemblance to the ARRL's counterproposal.

What's needed now from US Amateurs is not condemnation... The FCC won't change it's mind just because a bunch of us are pissed off! Rather, work with the new licensees, and encourage them to explore the many facets of Amateur Radio.... I watched many a VE quit after the introduction of No-Code licenses...they changed NOTHING!!! (..many dropped out of the ARRL after no-code licensing, even though the League was the LAST organization to get on the bandwagon.. they were afraid of being left behind) What they did was give up one of the best chances they could have ever hoped for of aquainting new hams with appropriate on-air behavior, with the pleasure of code and Ham traditions and lore. By turning their back on no-coders last time around many more experienced hams fostered the very operating practices they were so worried about by not being there as elmers! Get involved with your beloved hobby of ham radio with OTHERS... it's not something to be worshipped in a corner of your basement shack!

A last thought.... the bureaucrats and businesses who'd like to auction off or buy our spectrum must dance with absolute glee each time we rip ourselves apart over the "details"... One of these days in the middle of one of our

infights over the "small stuff" we're gonna' turn around and find that our bands have been auctioned off while we were preoccupied with each other!

The women I hear are not prostitutes. Why would a prostitute be
talking on the CB? I don't think a CB is needed to get plenty of
business!

My first though too - but, he qualified it "with a minimum of
equipment". With that as a requirement it's pretty hard to beat CW.

Bill Gates, Bill Clinton and the ARRL - I knew it! No CW op is safe
in this country any more.

Just think, if we required copying 60 wpm RTTY by ear in order to get
on HF there'd be plenty of spectrum available.

NEWINGTON, CT, Dec 30, 2029

"We believe that an individual's ability to tune a radio, display any
knowledge of antenna theory, radio theory or general electronics theory,
is not necessarily indicative of that individual's ability to contribute
to the advancement of the radio art. Therefore, all future tests shall be
based solely on payment of the appropriate licensing fee, whose amount the
individual will need to memorize from the sheet provided to the individual
during the testing session, and to then write a check in such amount
payable to the FCC. Those who successfully write a check in the
appropriate amount shall be licensed, and shall join the long and proud
community and heritage of the Amateur Radio Operating Community."

You know it gets pretty bad when someone is looking to crack a program because the DEMO has a bug in it and figures he need not buy it because of this bug, hell if more people bought the programmer might think about getting this BUG fixed sooner. I Scott feels this way about buggy software, then I believe that he does not OWN any software and it must all be PIRATED, WINDOWS for the very first version right up to the next one they release has to be the BIGGIST BUG that has every BEEN sold and look how many copies have been sold of this BUG! Well maybe it isn't a BUG but the longest running VIRUS that there is no cure for on this platform.

Cheers

Len

I think that a successful examinee would really deserve the license
if one of the questions was to derive Maxwell's equations and a second
was to use the equations to derive the properties of waveguides. What
I'm saying is that it's not the number of questions it's the quality
that counts.

Hi was wondering if anyone would be interested in upgrading their us versions to full 800 uk versions. This is done by changing out the cpu which i have available and i have a Certified electronics Engineer (electronics tech) to install them. These chips came from tandy uk and i was told that i have the last in existence period.If their is enough demand for the work i will get the chip duplicated here in the us to be installed. email if you have any questions al

Indeed. And how *ANYONE* can consider a test that uses only
prepublished questions with their exact answers,studied at
will and completely possible to memorize unrelated word
associations to accomplish a passing score, as "of quality"
is beyond reason. It's just another Federal copout. Looks
good on paper if that's all you see.

The Viking I referred to, runs on 115 VAC, or 6 "C" cell batteries, with automatic switch over to batteries, while running on 115 VAC, in the event of a power failure. They also have a 220 - 240 VAC option.

>cells?
>

The R2 is a dynamite little radio. It most definitely is not deaf, audio or
sensitivity wise.
I get excellent battery life using alkalines, ni-cads, or ni-mh batteries.
Programming will take a little getting used to, but what new radio doesn't?
There is shareware available to program the R2 with a pc.
Mine is almost always in my pocket.

Many scanner owners have asked about the new
Uniden Bearcat 780XLT base/mobile Trunktracker III
scanner scheduled for Summer, 2000. Most of the questions
received at CEI on this new product this month can be
answered by visiting our web page at
http://www.usascan.com then click on "CEI News."

Look for the Bearcat 780XLT section on this web page.

If you need further assistance, please e-mail CEI at cei@usascan.com.

Thanks everyone for taking the time to send us over 120,000 of your
comments in 1999 about how you like and use our products.
Your feedback helps CEI determine the products you want developed and
distributed
in the future.

Finally, thanks for a terrific 1999 fiscal year. Best wishes for the New
Year.

Well, now I wonder - has the FCC considered the fact that there will be too few Extra class callsigns to go around?

I don't care what they say, I'm still taking the 13wpm next week and "they" can't stop me!

Why couldn't they do something really constructive, like move the 40M novice CW segment someplace where the broadcast stations aren't stacked end to end every night?

And Surprise! I am already on record as being able to buy
that, even though I believe that every ham radio operator
should take it upon himself to be able to use code.
But you saw what the FCC said--essentially that "Our
solution is the one that causes us least work and time to
administer". Clearly they're never going to change it, in
our lifetimes.

Way to go, Don. YOU will be one of the few *REAL HAMS* to
emerge from all this.

While you're at it, just go for the Extra, too, prior to
April 14. You can get the 20wpm code in a month if you use
the W1AW code practice sessions on the air- which I would
imagine they'll probably discontinue after April 15 since no
one will need to use them for upgrading anymore.
If you do, try copying the sessions where they start faster
code first, then slow down progressively. Just relax and
listen, copying whatever you can at the faster speeds, then
when the slower segments come along you find that you can do
better than you thought! Try this for a month and you'll
have it. Good luck.

7784. Aviation frequencies (pilots, tower, ATC) for Montreal?

Hi,

I'm considering ordering a Uniden Bearcat 245XLT from the states. I was wondering what you can suggest for a reliable online store which makes shipping to Canada straightforward? The going price seems to be $199-230 U.S. which is much cheaper than from Canadian sources but what can I expect in terms of additional costs (duty, taxes) as well as delays due to Canadian customs? Are there are online stores to avoid and if so why?

Thanks in advance,
Felix Sieder

p.s. If you want to reply via e-mail please change the .xae to .ca

7786. more talkgroups?

Newsgroup: rec.radio.scanner

Message-ID: <s6oi24bb5k266@corp.supernews.com>
Source record: 98221

I currently use a PRO-2050 as my trunking scanner. My biggest complaint with it is that I can have only 50 talkgroups programmed in a scan list. That's not enough for the type of scanning that I like to do. Yes, I could put it into search mode and get them all, but that's too far in the wrong direction. With 50 I don't have enough room for all of the fire and PD TGs. On search, I get all of those plus tons of other stuff (including county S.O. and many smaller PDs and FDs from the county).

Is this a standard limit, or are there scanners out there that let you program more TGs? I'm having a hard time finding this info on the web; all anyone lists is the number of channels. I couldn't care less about how many channels it has. I'm currently using only 26 of the 300 channels my radio has....

No, I'd rather listen to you whine about having your amateur radio license given to you because you cried and whined how you can't pass a simple proficiency test. And since you brought it up, YOU are the only person who cries about my posts about Dave Munroe. Hopefully, some day, you will get ripped off and I hope it is by Dave Munroe.

ALSO, why be a spineless jellyfish and hide behind your AOL "phantom" account, this way we would have to clog up the newsgroups with replies to you.

And just how do you expect the other sites to get the same amount of
activity as eBay when you continue to use eBay? Do your part - move
your auctions NOW - give eBay the finger, not your $$$!!!

Yep. I always thought that the pre-published question pool was a
mistake. If a person was able to learn CW at 20 wpm and do a bit
of memorization, then they could have an Amateur Extra Class license.
The result - an Amateur who can send/receive code at a high speed,
but may know next to nothing about electronics.

That has now been simplified to only needing to learn 5 wpm Morse.
You can handle about that speed after simply memorizing the code.

I guess I will finally be getting my Extra Class license. The
11 wpm plateau where I have been stuck for several years will no
longer be a barrier.

I just wish they had the old style questions - where real electronic
knowledge was required.

You mean like the driving test, Dick? Every state publishes a simple
study guide for the license test, and the tests are even shorter than
the ham license test. Every answer on that test is in that short thirty
or forty page booklet. I don't hear your outrage over this. And I
don't see you handing in your driver's license to demand a new, tougher, test.

: True! FCC and ARRL should have dropped CODE *YEARS* ago.
: Keeping code is what KILLED ham radio.

Bah! Ham radio was never killed. There are still hundreds of
thousands of Hams in the US.

On the other hand, CB is a ghost of what it used to be (thank the
gods). When the last sunspot cycle died (and the "Convoy" wannabes"
got bored) - it got quiet. In my local city of 50,000+, there are
probably only about 30 CBers - there used to be over 1000.

A lot of this loss of growth/shrinkage is due to computers. Young
people just have other interests now.

: describe a perfect structure?

The only difference I would have had is 4 classes. A Novice class for entry to HF (CW requirement) and a Tech class (No CW). The General and Extra classes would both require CW testing.

This would allow entry into Amateur radio without a CW requirement, if that is what a person desired. It would also allow a low technical knowledge entry (Novice).

I would also have gotten rid of the question pools, and stiffened up the questions.

Being new to the news group is no sin, and asking questions that have been asked before is no sin either. If you do not ask questions there is no way that a person can eradicate their ignorance. The problem with this particular question about cell mods for the 895 is two fold.

First of the fed wanted to be real nasty they could find out who gives anyone advice about modifying this device for what is currently illegal cell phone listening and bust them for conspiracy to commit the crime of illegally modifying a radio to listen to cell call. And secondly this particular question gets asked once or twice a week

I understand that some pre purchase research is being done here. That's why this question and other questions like it are asked, but this particular question is like lighting a match in a gasoline refinery.

nough said,
Bill Carty.

That is total nonsense, Bill. Even a child can pass an Extra exam, including the morse code test. Many do. What does that prove? If we apply the standard you use above, it proves that no knowledge is necessary to pass the Extra exam, or that no knowledge is required to learn morse code?
